Tarikh: 11 JUNE 2013

DECLARATION

"I hereby, declare this report entitled "Pressure Monitoring System Interfaced with GSM" is the result of my own research except as cited in references.

Signature : 

Name : KHALIL RUSHDI BIN ABDUL GHAFAR

Date : 11 JUN 2013

APPROVAL

This report is submitted to the Faculty of Electronic Engineering and Computer Engineering (Electronic Telecommunication) of UTeM as a partial fulfilment of the requirement for the degree of Bachelor of Electronic Engineering (Telecommunication) (Hons.). The member of the supervisory committee is as follow:

NUR FATIHAH BTE AZMI
Pensyarah
Fakulti Kejuruteraan Elektronik Dan Kejuruteraan Komputer
Universiti Teknikal Malaysia Melaka (UTeM)
Hang Tuah Jaya
76100 Durian Tunggal, Melaka.

(Official Stamp of Supervisor)

NAME : PN. NUR FATIHAH BINTI AZMI

DATE : 11JUN 2013

DEDICATION

Specially dedicate to

My beloved family, lecturers, supervisor and friends who have guided and inspired me through my journey in education. Also thanks to their support, beliefs and motivation.

ACKNOWLEDGEMENT

Grace upon Allah S. W. T. because finally the project was done. Firstly, I would like to thank my supervisor on “Pressure Monitoring System Interfaced with GSM” project, Pn. Nur Fatimah Binti Azmi for guiding me for two semesters in order to accomplish this project. Secondly, I would like to thank Engr. Siti Aisyah Binti Anas as my temporarily supervisor. Although, she had been my supervisor for only a month, I had learnt many things related to the project from her. Then, I want to thank my parent as they keep on supporting me from the beginning. I also want to thank my dearest friends who have been very helpful to me. And finally, thank you for everyone who has been supporting me in finishing this project. I end this acknowledgment with towards, thank you.

ABSTRACT

Pressure can be defined as a force presses over an area. It cannot be seen but when it does you can feel it. Although pressure is sightless, it gives an impact to a certain thing. One of a simple example that can explain the effect of pressure over an area is s shaking tree blown by a wind. The wind presses over an area which is the tree resulting in pressure. For some materials, pressure can change its properties. These materials are chemical substances. An amount of force exerted by pressure can change the nature and characteristics of the substances. For example, forces of pressure can faster or slower the rate of reaction or melting point of a chemical substance. The result is depended on a type of chemical being forced. In a chemical processing industry, this factor might disturb the desired results which can cost a lot of money to the company. Hence, in order to avoid this unwanted situation, a device known as Pressure Monitoring System (PSM) interfaced with GSM is designed. The device can detect force of pressure around by using pressure sensor and show it based on a real time condition. The device also is implemented with warning system in order to notify people about the current pressure condition. The warning system consists light indicator and message notification.

ABSTRAK

Tekanan boleh didefinisikan sebagai daya yang dikenakan ke atas suatu kawasan. Tekanan adalah sesuatu yang tidak dapat dilihat tetapi ianya boleh dirasai. Walaupun tekanan tidak dapat dilihat, tetapi ia dapat memberi kesan kepada sesetengah benda. Suatu contoh mudah untuk menerangkan tekanan ialah pokok yang bergoncang semasa ditiup angin. Angin yang bertiup menekan pokok tersebut yang mana adalah salah satu konsep tekanan. Untuk sesetengah bahan, tekanan dapat merubah sifat-sifatnya. Bahan yang dimaksudkan tersebut adalah bahan kimia. Tekanan yang dikenakan keatas bahan-bahan kimia boleh merubah bentuk dan sifat-sifatnya. Sebagai contoh, tekanan dapat mempercepatkan atau memperlahankan kadar reaksi dan takat lebur sesuatu bahan kimia tersebut. Kadar reaksi dan takat lebur tersebut bergantung kepada jenis bahan kimia yang terbabit. Dalam industry pemprosesan kimia, benda-benda ini boleh menjejaskan hasil yang dijangka dan seterusnya mendatangkan kerugian kepada syarikat. Jadi, untuk mengelakkan daripada terjadi keadaan begitu, suatu alat yang dikenali sebagai “Pressure Monitoring System” (PMS) yang digabung dengan GSM direka. Alat tersebut boleh megasan tekanan udara di sekeliling menggunakan pengesan tekana dan menyiarkan bacaan tersebut secara langsung. Alat tersebut juga dibekalkan dengan sistem amaran untuk memberi amaran tentang keadaan tekanan semasa. Sistem amaran terdiri daripada penunjuk cahaya dan pemberitahuan melalui mesej.
