UNIVERSITI TEKNIKAL MALAYSIA MELAKA

2013

BORANG PENGESAHAN STATUS TESIS

JUDUL: RAKAN KESELAMATAN UTEM (RKU)

SESI PENGAJIAN : 2013

Saya SYED NASHARUDIN BIN SYED OTHMAN mengaku membenarkan tesis PSM ini disimpan di Perpustakaan Fakulti Teknologi Maklumat Dan Komunikasi dengan syarat-syarat kegunaan seperti berikut.

1. Tesis dan projek adalah hakmilik Universiti Teknikal Malaysia Melaka.
2. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan untuk tujuan pengajian sahaja.
3. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan tesis ini sebagai bahan petukaran antara insitusi pengajian tinggi.
4. ** Sila tandakan (✓)

_____ SULIT (Mengandungi maklumat yang berdarjah keselamatan atau kepentingan Malaysia seperti yang termaktub dalam AKTA RAHSIA RASMI 1972)

_____ TERHAD (Mengandungi maklumat TERHAD yang telah ditentukan oleh organisasi badan dimana penyelidikan dijalankan)

_____ TIDAK TERHAD

(TANDATANGAN PENULIS)

Alamat Tetap : 280-1 Jln Tanjung

Kg Gong Pauh 24000 Kmn Trg

Tarikh : _____

(TANDATANGAN PENYELIA)

Nama Penyelia

Tarikh : _____

CACATAN: ** Jika tesis ini SULIT atau TERHAD, sila lampirkan surat daripada pihak berkuasa.

Tesis dimaksudkan sebagai Laporan Projek Sarjana Muda(PSM)

Rakan Keselamatan UTeM (RKU)

DECLARATION

I hereby declare that this project report entitled
Rakan Keselamatan UTeM (RKU)

Is written by me and is my own effort and that no part has been plagiarized
Without citations.

STUDENT : SYED NASHARUDIN BIN SYED OTHMAN Date : _____

SUPERVISOR: NOR HASLINDA BINTI ISMAIL Date : _____

ACKNOWLEDGEMENTS

Alhamdulillah, firstly it is a pleasure to thank those who made this final year project possible. A very special thank goes to my helpful supervisor, Madam Norhaslida Binti Ismail. Her supervision and support that she gave truly help me in term of the project's progression and smoothness. The co-operation is much indeed appreciated.

My grateful thanks also go to both my parents and all the family members. The moral support given is very much appreciated. Without them, it would be a bit difficult for me to keep working hard developing the project. Thank god I have a very supportive and loving family.

Not to forget, all my housemates especially Mohd Taufiq, Muhammad Azwan, Khairul Syahmi, Nuruddin, Ruzaini and Muhammad Faez that help me from time to time during the project. The value of working together as a team is really something valuable and important for the future. It also brought us together to appreciate the true value of real friendship and respect of each other.

Last but not least I would like to thank all my classmates and the lecturer at the Faculty of Information and Communication Technology, Universiti Teknikal Malaysia Melaka (UTeM) that have encourage, support and help me in completing this project successfully.

ABSTRACT

This project will study the usage and significance of Message Service in Android's Smartphone as the main medium for sending and receiving report or feedback among the UTeM's community. The goal is to assist the students or staffs to place incident report that happened in the UTeM campus directly to Security Department for immediate action. This paper will cover the project's background, objectives, analysis and design as well as the project implementation. The results would be used by the Security Department to improve their work performances and competency toward the campus safety and comfortable to study and living.

ABSTRAK

Projek yang dibangunkan ini merangkumi kajian kegunaan dan signifikansi penggunaan mesej dalam telefon pintar Android sebagai medium utama dalam penghantaran dan penerimaan laporan kecemasan atau maklum balas di antara ahli komuniti UTeM. Tujuan utama projek ini dibangunkan adalah untuk membantu para pelajar dan staff untuk membuat laporan kecemasan yang berlaku sekitar kawasan kampus UTeM secara terus kepada Unit Keselamatan Universiti untuk tindakan lanjut. Kajian ini meliputi latar belakang projek, objektif, analisis dan rekabentuk serta implimentasi projek. Hasil projek akan digunakan oleh Unit Keselamatan Universiti untuk meningkatkan mutu prestasi kerja serta tahap kompetensi demi menjamin tahap keselamatan dan kesejahteraan warga UTeM sama ada untuk belajar mahupun menetap di kampus.

CHAPTER I

INTRODUCTION

1.1 Project Background

Rakan Keselamatan UTeM (RKU) is a security system that helps student or staff to report incident that will happen in the UTeM directly to Security Department for immediate action. Basically, RKU used Short Message Service (SMS) as main medium for sending and receiving report or feedback to the UTeM's community.

The needs for nowadays technology have forced the RKU to be developed in application form. The introduction of Smartphone to the world have changes the way of using a phone in human lifestyle. This situation causes an enhancement for the RKU's innovation. This enhancement of technology needs an application that will make the user to use more efficiently.

This application also makes the information to be sent in variety way such as text and picture. RKU application also will makes the system will be more better approach towards student compared to SMS. This is because of the SMS charges towards the community when sending a report. Students nowadays tend towards the likes of freeware and free charged services compared to paid services. The existence of the application will makes the UTeM's community to be closer towards RKU.

1.2 Problem Statements

RKU system is a web base system that requires a user to send a report via sms. Each report will cause the community to paid up to 10 cents per reports. Thus, the community must ensure that they must have at least 10 cents of their prepaid ballance before sending a report.

The older RKU will only let UTeM's community to send text type report only. This will force the UTeM's community to explain the situation more clearly that is more text. This also cause the Security Officer to read carefully to understand the situation before sending helps.

Beside that, the application can not trace the reporting location automatically. The user need to type the location in the report sms. The system does not use the GPS coordinate tracker to detect the user location.

To report a complaint the UTeM's community must know the Hotline numbers used by the system. If the community forgotten the number, they will not be able send the report because there is no other alternative.

1.3 Objective

The objective for developing RKU application is:

- i. To enable user to send report without charges.
- ii. To improve the report content by implementing the image capturing in explaining the real situation.
- iii. To enable user send their location within the report.
- iv. To develop the alternative way in sending report apart from using SMS.

1.4 Scope

The scope of Rakan Keselamatan UTeM (RKU) mobile application are divided into two; User and Application. The scope will explain the availability of the user and system to perform the activity. The scope is explain below:

1.4.1 Admin:

- i. Create and manage account of RKU Server user.
- ii. Change username and password.

1.4.2 Director:

- i. View all the report location on map.
- ii. Change username and password.

1.4.3 Supervisor:

- i. View and manage report records.
- ii. Send feedback to community.
- iii. Change username and password.

1.4.3 Security Officer:

- i. View report records.
- ii. Send feedback to community.
- iii. Change username and password.

1.4.4 UTeM's Community:

- i. Send the report via application with 3 media of information; text, image and location
- ii. Receive a feedback from Security Officer or Supervisor.

1.4.5 System:

- i. The system can receive the data report from user in text and image
- ii. The system can locate the location automatically by data provided in the report.

1.5 Project Significance

RKU mobile application is an application that was developed as the alternatives ways besides the report system based on SMS that use the OZEKI technology. Moreover the system was developed to improve the older system in term of the report content with the addition of the image and location by GPS. The GPS coordinate used to determine the location of the incident. The system use the internet as medium for communication. Thus, the system is better compared to the older system because it will not charges the user when sending a report. The application is easy to get by only installing on their android Smartphone, The user also will not be charges when downloading the application..

1.6 Expected Output

The expected outputs of this application development are:

- i. This application will allow the user to send the report to the server and receive by the Officer, Then the officer can give feedback.
- ii. This application will allow user to send image in order to help the user to explain the real situation to the Officer.
- iii. This application will give the current user location to the server when the user click the location button.
