

**MY PREGNANCY CARE MOBILE HEALTH MONITORING
APPLICATION SYSTEM**

SAW YEE CHING

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

BORANG PENGESAHAN STATUS TESIS*

JUDUL: **MY PREGNANCY CARE MOBILE HEALTH MONITORING APPLICATION SYSTEM**

SESI PENGAJIAN: **2013/2014**

Saya: **SAW YEE CHING** mengaku membenarkan tesis (PSM) ini disimpan di Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dengan syarat-syarat kegunaan seperti berikut:

1. Tesis dan projek adalah hakmilik Universiti Teknikal Malaysia Melaka.
2. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan untuk tujuan pengajian sahaja.
3. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan tesis ini sebagai bahan pertukaran antara institusi pengajian tinggi.
4. ** Sila tandakan (/)

_____ SULIT (Mengandungi maklumat yang berdarjah keselamatan atau kepentingan Malaysia seperti yang termaktub di dalam AKTA RAHSIA RASMI 1972)

_____ TERHAD (Mengandungi maklumat TERHAD yang telah ditentukan oleh organisasi/badan di mana penyelidikan dijalankan)

_____ TIDAK TERHAD

(TANDATANGAN PENULIS)

(TANDATANGAN PENYELIA)

Alamat tetap: _____

(Nama Penyelia)

Tarikh: _____

Tarikh: _____

CATATAN: *Tesis dimaksudkan sebagai Laporan Akhir Projek Sarjana Muda(PSM)

** Jika tesis ini SULIT atau TERHAD, sila lampirkan surat daripada pihak berkuasa.

MY PREGNANCY CARE MOBILE HEALTH MONITORING APPLICATION
SYSTEM

SAW YEE CHING

This report is submitted in partial fulfilment of the requirements for the
Bachelor of Computer Science (Interactive Media)

FACULTY OF INFORMATION AND COMMUNICATION TECHNOLOGY
UNIVERSITI TEKNIKAL MALAYSIA MELAKA

2014

DECLARATION

I hereby declare that this project report entitled

MY PREGNANCY CARE MOBILE HEALTH MONITORING APPLICATION SYSTEM

Is written by me and is my own effort and that no part has been plagiarized
without citations.

STUDENT : _____ **DATE:** _____

(SAW YEE CHING)

SUPERVISOR: _____ **DATE:** _____

(DR. AZAH KAMILAH BINTI MUDA)

DEDICATION

To my beloved parents

Thanks for always providing me the continued support and counsel in order to complete this final year project. You are my constant source of inspiration. Most appreciate for giving me the moral supports to do any task with enthusiasm and determination.

To my supervisor

Your guidance, sage advice, and patient encouragement aided me to complete this Final Year Project in innumerable ways.

To my lovely friends,

Your support throughout the process of Final Year Project was greatly needed and deeply appreciated.

ACKNOWLEDGEMENTS

I would like to express my sincerest gratitude to all those who gave me the possibility to complete this thesis. First and foremost, I would like to express my deeply appreciation to my beloved supervisor Dr. Azah Kamilah Binti Muda, who was generously spending her time and expertise to support my work. I am deeply impressed with her good-nature support.

In addition, I wish to thank to my family members, friends and the selected testers during the testing phase of this project. Without their excitement and willingness to provide feedback, this project will not be able to complete successfully and meaningfully.

Besides, I am grateful to the nutritionist from the Putra Hospital and Sime Darby Hospital, Miss Mok and Puan Nurhidayah Ghazali, who willing to share their experience and knowledge throughout the project. This project will not be possible without their support and involvement.

Last but not least, I am obliged to the Google Engine and UTeM library to provide me valuable resources that help me throughout the completion of this Final Year Project.

ABSTRACT

The purpose of this project is to develop an Android application that can provide a useful guide for the pregnant mom to manage their gestational weight gain (GWG) by themselves. The application will serve as an alternative to encourage self-care among the pregnant women in order to maintain a healthy weight gain during their pregnancy stages. This application is developed to bring convenience to the pregnant women and increase their self-care awareness. Using an Agile software development approach, the project gathered requirement, designed, analysis, and implemented a smartphone application utilizing Android platform. At the last phase, the project will be tested by selecting focus group which is several pregnant women and few experts in the pregnancy field.

ABSTRAK

Tujuan projek ini adalah untuk membangunkan sebuah aplikasi android yang boleh memberi panduan yang berguna kepada wanita yang hamil supaya mereka boleh menguruskan berat kencing dengan sendiri. Aplikasi ini akan digunakan sebagai satu alternatif untuk menggalakkan penjagaan diri di kalangan wanita hamil bagi mengekalkan berat badan yang sihat semasa penghamilan. Dengan menggunakan pendekatan pembangunan perisian Agile, projek ini berkumpul keperluan, direka, analisis, dan melaksanakan aplikasi telefon pintar yang menggunakan platform Android. Pada fasa terakhir, projek ini akan diuji dengan kumpulan fokus yang terpilih yang beberapa wanita hamil dan beberapa pakar dalam bidang kehamilan.

CHAPTER I

INTRODUCTION

1.1 Project Background

In the era of globalization, mobile technologies have greatly evolved throughout the world due to the conveniences that it brings to the users. According to a study done by Afrizal Abdul Rahim (2013), there is a gradual increase of smartphone penetration in Malaysia from 47% in year 2012 to 63% in year 2013, while for the tablet penetration there is increasing almost three-fold which is from 14% to 39%. Because of this, the Ministry of Health Malaysia is looking to capitalize the potential of mobile technology to deliver the information about the gestational weight management for pregnant woman.

The title for this project is My Pregnancy Care. The purpose of this project is to develop an Android application that can provide a useful guide for the pregnant mom to manage their gestational weight gain (GWG) by themselves. This project consists of two parts: the first is to do a research based on the title so that this

application is useful for the pregnant women with the information it provide. The next part of the project is to expose to the development of the android which include development tools, coding, and also the interfaces.

Gestational Weight Gain (GWG) refers to the weight gain by pregnant women during conception until delivery of the baby. It is crucial to manage the gestational weight gain because it may affect the health risk of both mother and infant. Many health issues will arise during the pregnancy stage if the pregnant mom has a poor gestational weight management. Some women will get underweight while some women may get overweight due to the poor gestational weight management. Both of these issues may lead to the risk of pregnancy complication. Hence, there is a necessary to have a good gestational weight management to reduce the risk of pregnancy complication.

The goal of the project is to bring convenience to the pregnant women. Most of the pregnant women need to visit their doctor regularly for a check-up and keep track of their health care including their GWG. However, the doctor might not be able to always keep track on them and give them immediate feedback. Thus, this application is to encourage the pregnant women can keep track on their GWG at anywhere and anytime they wish. In addition, this application will also provide some guidance to nutrition and some workout for the pregnant women. Hence, this may help them save their time, improve their healthcare and satisfaction and reduce costs.

In conclusion, this application is developed to bring convenience to the pregnant women and increase their self-care awareness. Therefore, this application may act as an alternative or medium that will help the pregnant women to reduce the risk during pregnancy. A market survey will be analysis to develop a persuasive application that can bring convenience to the target user. At the end of the project, the persuasiveness of the application will be evaluated.

1.2 Problem Statements

Consumption of adequate of balance and healthy diet during the pregnancy stages are required for a healthy and successful pregnancy upshot. However, there are many pregnant women having unconscious of the importance of the prenatal nutrition. Hence, this may indirectly affect their gestational weight gain. Having obesity or underweight during the conception stage may cause pregnancy complication later. Thus, this application may guide the pregnant women to maintain a healthy gestational weight gain.

In addition, most of the pregnant women are too rely on their physician or doctor. They have to regularly make an appointment and visit to their doctor for a check-up and helping them keep track on their GWG. Due to the dependability of the pregnant women, they may cause strain of the hospital resource and burden the doctor. Besides, they also will waste their time and money.

1.3 Objective

The objectives of this project are as follows:

- i) **To investigate the most efficient way to help pregnant women to maintain healthy during their prenatal stages**

As the increase of widespread of smartphones consumers, the smartphone become a necessity in our daily life. Most of the human activities can perform through smart phones. In response to this, smartphone serve as a good platform for self-care.

- ii) **To develop an Android software application that will help pregnant women to manage their own Gestational Weight Gain in which some recommendation of nutrition and workout are recommended to them during the prenatal stages**

Weight gain during pregnancy is vital for baby grows. A poor gestational weight management may cause labor complication. Hence, in the My Pregnancy Care application, it provides a pretty handy guide for the pregnant women to have balanced diet consumption and stay healthy during their pregnancy stages. In order to manage the gestational weight gain in a healthy amount, workout also plays an important role. In this application, it will provide some recommendation workouts for the pregnant women to help them stay healthy and keeping fit during pregnancy. This workout is aimed to help the pregnant mom to adapt to their changing bodies and their growing baby.

iii) To evaluate the effectiveness and how intuitive the My Pregnancy Care application navigation was

As a developer who develops the application, it is a necessity to identify the requirements and the needs of the intended audience. By testing the application with the selected target users, it would help the developers evaluate how the application functions from a user perspective view.

1.4 Project Scope

The scope of this project is to include essential functionality to encourage self-care among the pregnant women throughout their prenatal stages.

1.4.1 Target audience

This product is developed and to serve pregnant women to help them stay healthy in the pregnancy stages. According to a study done by the Perdana University Graduate School of Medicine showed that pregnant women in Malaysia are at risk of obstetric complications. Furthermore, the study also concludes that maternal obesity also associated with the increase morbidity of Gestational diabetes, Gestational hypertension, Preterm labor, Postpartum haemorrhage, Eclampsia, Shoulder Dystocia and etc. Hence, this application will serve as an alternative for the pregnant women to keep track on their own GWG.
