Tuan/Puan,

**PENINGKELASAN LAPORAN PSM SEBAGAI SULIT/TERHAD LAPORAN
PROJEK SARJANA MUDA TEKNOLOGI KEJURUTERAAN PEMBUATAN (
BETT : MUHAMMAD TAUFIQ AMRI BIN SAHARD'DIN).**

Sukacita dimaklumkan bahawa Laporan PSM yang tersebut di atas bertajuk “
*Developing A Prisoner Escape Detector Security System Using Very High
Frequency Implementation For Jabatan Penjara Malaysia*” mohon dikelaskan
sebagai *SULIT / TERHAD untuk tempoh LIMA (5) tahun dari tarikh surat ini.

2. Hal ini adalah kerana ianya merupakan projek yang ditaja Oleh Jabatan
Penjara Malaysia, Taiping.

Sekian dimaklumkan. Terima kasih.

Yang benar,

* Potong yang tidak berkenaan

ABSTRAK

Hampir setiap kes kelarikan diri daripada penjara telah di rekod oleh Jabatan Penjara Malaysia. Ini membimbangkan Jabatan Penjara Malaysia masa hadapan jika kes itu akan berterusan. Apabila banduan melarikan diri daripada penjara ia adalah sangat merbahaya kepada masyarakat. Kerana apabila banduan melarikan diri daripada penjara, kebarangkalian banduan akan mencari mangsa untuk membalas dendam. Banyak kes berlaku, banduan melarikan diri dan cuba membunuh mangsa yang menyebabkan ia masuk ke penjara. Dan kes-kes lain, banduan melarikan diri melakukan jenayah yang sangat merbahaya. Jadi saya mereka alat ini, untuk mengurangkan dan mencegah banduan melarikan diri daripada penjara.

ABSTRACT

Practically every case escape of prisoners was record by the Prison Department of Malaysia. This worrying the Malaysian Prison Department upcoming if the case is ongoing. When prisoners escape from prison it is very dangerous to society. Because when prisoners escape from prison, the probability of the prisoners will find the victims other as Revenge. Many cases have come out, the prisoners escaped and attempted murder victim causing it in prison. And other cases, prisoners escape do very extreme crimes. So I designed this tool, to reduce and prevent prisoners escape from prison.

DEDICATION

I want to dedication at my beloved my father, Sahard"din Bin Haji Mohd Hashim and my mother, Siti Khatijah Bee Binti Mohd Hashim. Because them was given positive supportive advice when while I doing this project. Many problems I was ahead because of them I was success to solve it every each problems I was ahead.

ACKNOWLEDGEMENT

I am grateful and would like to express a special thanks to my supervisor, Mr. Md. Ashadi Bin Md. Johari because using much time for help me on do a report, training me for presentation, giving a excellent advice and teach how to handle the problem coming when do this Final Year Project (FYP). And also I want to thanks to Mrs. Raeihah Binti Mohd Zain because accept me to be my co-supervisor and helping me to complete my Final Year Project (FYP).

I would like to acknowledge with appreciation to all technician Fakulti Teknologi Kejuteraan (FTK) laboratory at Universiti Teknikal Malaysia, Melaka (UTeM) for giving using laboratory and equipment to make it my hardware device. And also to all my lecturrer and all instructor laboratories for teach me about engineering theory and practical from semesta 1 until semesta 7 because of them I am very creative and can create my own device.

Last but not least, my sincere thanks to all those helping me to complete this report. A special thanks to Jabatan Penjara Malaysia, Taiping because giving an opportunity for agree to do a calibration for my Final Year Project (FYP) and I am want to thanks also to Sir TPP Ahmad Fikri Bin Safiar as Facilitators of “UNIT PRA BEBAS” and WP Sir Azwan or their nick name is Zack as Prison Officer tester this device because much helping me when do this my testing device at Jabatan Penjara Malaysia, Taiping and giving sponsor to create this device.

CHAPTER 1

INTRODUCTION

This chapter is about the project background, the objective of the project, and work scope this project.

1.1 Background

This project is have a collaborative project with the Prisons Department of Malaysia. In Malaysia, there are 27 prisons across Malaysia, 18 in Peninsular Malaysia and 9 more in Sabah and Sarawak. Each prison is headed by a Director of Prisons different ranks according to a prison capacity. With this project it was collaboration with the Prisons Department of Malaysia, Taiping at Perak Darul Ridzuan.

This is a small background the Prisons Department of Malaysia. Taiping prison built in 1879, with 513 staff, 9 workshop and 9 block of prisoner. Below this is organizational chart of Prisons Department of Malaysia, Taiping:

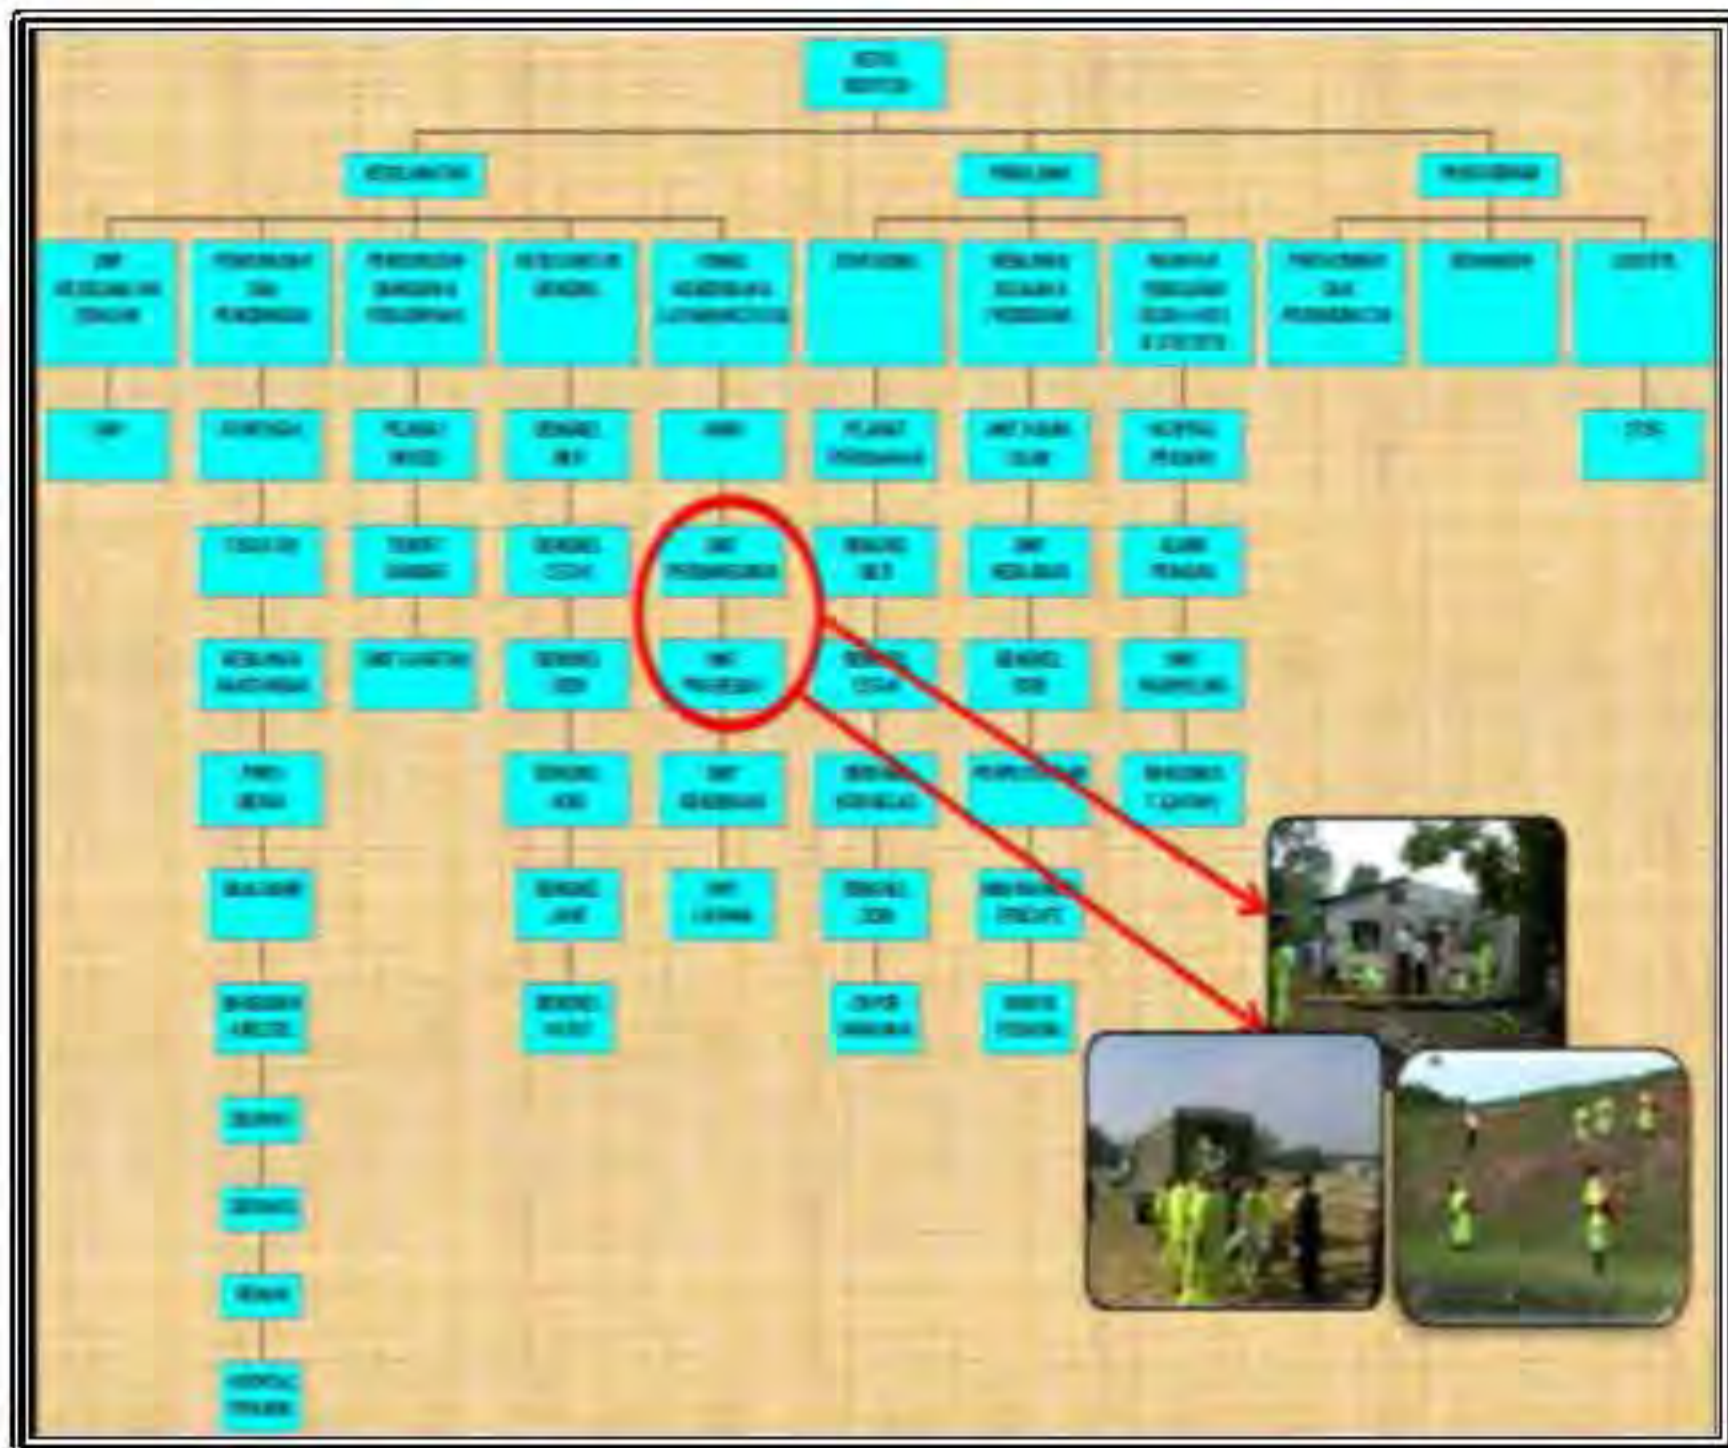

Figure 1.1.0 : Organizational Chart Prison Department Of Malaysia.

At Jabatan Penjara Malaysia, Taiping have group in “UNIT PRA BEBAS”. From this “UNIT PRA BEBES” have 1 more small group where their call KIK group. Every department government have a group call it “Kumpulan Inovatif Kretif”. I was took this opportunity at Jabatan Penjara Malaysia, Taiping to present this project for them be sponsor this project. Them was agree to be sponsor this project after present about this project to KIK group. And KIK group giving an opportunity for this project to communicate and discuss about this project condition and expected the device them needed and budget to make this device or tool. Facilitators in this group KIK is Sir TPP Ahmad Fikri Bin Safiar. As below is organization chart of special group from “UNIT PRA BEBAS”:

Figure 1.1.1 : Organizational Chart Special Group “PRA BEBAS”.

Until nowadays, cases prisoner try to escape and cases prisoner escape still happen in Malaysia. The aim of the proposed work is to improve the Prison Officers observing of prisoner , improve the system of care prisoner in Malaysia and improvement technology to the Prisons Department of Malaysia.

1.2 Objective

Nowadays less technology produced in the Prisons Department of Malaysia to improve the surveillance of prisoners. And with this project, this project was create a new device or tool for improve system security when Prison Officer on duty. This project was created to the next prisoner who is attempting to escape would be reduced. Therefore, this device is designed to tracking of prisoners who tried to escape and facilitate the officers to search for the prisoner escape. By using this technology tools, from this project with have a partners at the Prisons Department of Malaysia can guarantee for execution prisoners based on system of punishment criminal justice, ensuring the safety of prisoners in undergoing punishment, restore

character and attitude of prisoners to implement effective rehabilitation program and always give to the management of cooperation smoother administration

The Most Of Important Objective In This Project:

1) Reduce negligence case of Prison Officer in charge.

Nowadays, with the Prison Officer in duty they can't careless however for 1 second. But I can say as human mistake, It can be have careless the Prison Officer when in duty sometimes. That's why the prisoner can run their self when careless the Prison Officer when in duty. With this tool I create, It can avoid from any careless.

2) Facilitate the tracking of prisoners who escaped from the officers.

Before this, when happen the prisoner escape so hard for the Prison Officer to find the prisoner escape because their good in hidden. By using this tool I create it can help the Prison Officer to tracking of prisoners if far from 15 meters. When the device UHF Transmitter and Receiver (with relay and alarm circuit) near with the Prison Officer, the Prison Officer will know the prisoner in around near the Prison Officer. With this technology tools make easy for the Prison Officer to tracking where the prisoner hidden.

3) Reduce run-prisoner cases in Malaysia.

With this tool, the prisoner can't easy to run away again. Because with this technology, it will be hard a prisoner escape from the Prison Officer anymore. However the Prison Officer careless, the Prison Officer can know the prisoner escape from them. And with far 15 meters the Prison Officer can catch it back and can track it if the prisoner hidden.

1.3 Problem Statement

Such as below is pure statistic of cases prisoner try to escape and cases prisoner escape in Years 2006 until 2013 at Malaysia from the Prisons Department of Malaysia:

STATISTIK KES KELARIAN DAN CUBA LARI TAHUN 2006 - 2013																		
BIL	INSTITUSI	TAHUN														JUMLAH		
		2006		2007		2008		2009		2010		2011		2012			2013	
		LARI	CUBA	LARI	CUBA	LARI	CUBA	LARI	CUBA	LARI	CUBA	LARI	CUBA	LARI	CUBA		LARI	CUBA
1	ALOR SETAR	1						1					2			2	6	
2	SG. PETANI		1														1	
3	P. PINANG			1													1	
4	PRA BEBAS KEMTA					1											1	
5	SG. BULOH								1								1	
6	KAJANG	1				1							1				3	
7	J. BAHRU								1			1					2	
8	SPG. RENGAM		1														1	
9	P. CHEPA		1								1		1				3	
10	PENOR					1			1							1	3	
11	SG. UDANG													1			1	
12	DDM													1			1	
13	KOTA KINABALU											1					1	
14	KOTA KINABALU (W)										1				2		3	
15	TAWAU								1		1						2	
16	P. BORNEO	1				1											2	
17	SIBU									1							1	
18	WIRI					1							1				2	
19	PPA SPG. RENGAM	1															1	
20	PPA KAMUNTING					1											1

22	SHG KENINGAU	2				1	1								14		18	
23	PPP SULTAN ABD HALIM														1		1	
24	DEPOT PATI	19	4	5	2												30	
	JUMLAH	25	7	7	2	5	2	1	1	4	2	3	5	1	4	17	3	89
	JUMLAH PENUH	32		9		7		2		6		8		5		20		89

Figure 1.3.0 : Statistic Of Cases Prisoner Try To Escape And Cases Prisoner Escape In Years 2006 Until 2013 At Malaysia.

From the statistic cases prisoner try to escape and cases prisoner escape find years problem need to settle by using pareto diagram:

1) Total value each year's cases prisoner try to escape and cases prisoner escape.

2006	2007	2008	2009	2010	2011	2012	2013
32	9	7	2	6	8	5	20

2) Arrange the highest value until lower value .

2006	2013	2007	2011	2008	2010	2012	2009
32	20	9	8	7	6	5	2

3) Find cumulative percentage.

cases of the escape and the escape trial for 8 years			
Year	Count	Cumulative Count	Cummulative %
2006	32	32	36
2013	20	52	58
2007	9	61	72
2011	8	69	77
2008	7	76	85
2010	6	82	92
2012	5	87	97
2009	2	89	100
