DECLARATION

I declare that this thesis entitle "Quality Recognition And Cost Evaluation Based On Activity-Based Costing (ABC) for Aluminum Alloy using CNC Laser Cutting and Waterjet Machine" is the results of my own research except as cited in references. The thesis has not been accepted for any degree and is not concurrently submitted in candidate of any other degree.

Signature :

Name : NOOR SUHAILI BINTI MOHD ASRI.....
Date : 4 JANUARI 2019.....

APPROVAL

I hereby declare that I have read this thesis and my opinion this thesis is sufficient in terms of scope and quality for the award of Bachelor Degree in Manufacturing Engineering Technology (Product Design) with Honours.

Signature :.....

Name : NUR AIMAN HANIS BINTI HASIM

Date : 4th JANUARY 2019

DEDICATIONS

I am dedicating this thesis to beloved people who have meant and continue to mean so much to me. Specially dedicated to my beloved father, En. Mohd Asri bin Mat Daud and my beloved mother, Pn.Noriah binti Saamah who taught me the value of hard work, understanding, patient and supportive. Special thanks to my supervisor Pn. Nur Aiman Hanis bintit Hasim for the encouragement, constructive guidance and patient in fulfilling my aspiration in completing this project. Do not forget to my Co-Supervisor, Mr Soufwhee with a great help in preparing this project. To my brother, my sister and entire friends, will never achieve without all of you.

ABSTRACT

Nowadays, the cutting machine can cut many different materials in terms of different quality and cost. CNC Laser cutting and Water jet machine have been used in UTeM to cut the workpiece or produce the product based on cost and quality with the variety material and thickness. The CNC laser cutting and water jet have a different parameters that will be produce different cost and quality. This research is about quality recognition and cost evaluation based on Activity Based Costing (ABC) for aluminum alloy using CNC laser cutting and water jet machine. This project will focus the cost evaluation based on Activity Based Costing which is a direct cost for the machine and indirect cost for the overall process when cut the aluminum alloy. The problem faced is to estimated cost for CNC laser cutting and water jet machine when industry come to UTeM for the purpose of materials cutting using CNC laser cutting and water jet machine. The framework Activity Based Costing can guide the process of how to calculate the cost based on Activity Based Costing with correct cost. Lastly, for quality recognition the quality of each work piece tested using surface roughness tester and process capability. The surface roughness tester is based on the value of Ra, Rq and Rz. The value was observed to identify the comparison of quality work piece using CNC laser cutting and water jet machine. In surface roughness tester the water jet machine depicts a better quality with the lowest value of Ra, Rq, and Rz compare to CNC laser cutting value. Process capability is a specification limits for a specific process or products to meet customer requirements. The value of Cpk in CNC laser cutting is higher than water jet machine, so it becomes the best requirement meet for the process capability.

ABSTRAK

Pada masa kini, mesin pemotong boleh memotong banyak bahan yang berbeza dari segi kualiti dan kos. Pemotong laser CNC dan mesin jet air telah digunakan di UTeM untuk memotong bahan kerja atau menghasilkan produk berdasarkan kos dan kualiti dengan pelbagai bahan dan ketebalan. Pemotong laser CNC dan mesin jet air mempunyai parameter yang berbeza yang akan menghasilkan kos dan kualiti yang berbeza. Kajian ini adalah mengenai pengiktirafan kualiti dan penilaian kos berasaskan Kos Berdasarkan Aktiviti (ABC) untuk aluminium aloi dengan menggunakan pemotong laser CNC dan mesin jet air. Projek ini akan menumpukan pada penilaian kos berdasarkan Kos Berdasarkan Aktiviti yang merupakan kos langsung untuk mesin dan kos tidak langsung untuk proses keseluruhan apabila memotong aluminium aloi. Masalah yang dihadapi adalah untuk anggar kos pemotong laser CNC dan mesin jet air ketika industri datang ke UTeM untuk tujuan pemotongan bahan menggunakan pemotong laser CNC dan mesin jet air. Kerangka kos berdasarkan aktiviti dapat membimbing proses bagaimana untuk mengira pembayaran berpandukan kos berdasarkan aktiviti dengan tepat. Akhir sekali, untuk pengiktirafan kualiti untuk setiap potongan bahan kualiti diuji menggunakan penguji kekasaran permukaan dan keupayaan proses. Penguji kekasaran permukaan adalah berdasarkan kepada nilai Ra, Rq dan Rz. Nilai yang diperhatikan untuk mengenal pasti perbandingan setiap bahagian yang di potong menggunakan pemotongan laser CNC dan mesin jet air. Dalam penguji kekasaran permukaan mesin jet air menggambarkan kualiti yang lebih baik dengan nilai terendah Ra, Rq, dan Rz berbanding dengan nilai pemotong laser CNC. Keupayaan proses adalah had spesifikasi untuk proses atau produk tertentu untuk memenuhi keperluan pelanggan. Nilai Cpk dalam pemotongan laser CNC adalah lebih tinggi daripada mesin jet air, jadi ia menjadi memenuhi keperluan terbaik untuk keupayaan proses.

ACKNOWLEDGEMENTS

First and foremost, I thank Allah (SWT) for His help and guidance for letting me live to see this project through. I am grateful and thankful to my supervisor, Pn. Nur Aiman Hanis bt Hasim for the encouragement, advice and unwavering support in the completion of the project. I can never pay you back for all the experience you have helped me to make sure my thesis is always on track. Thank you so much.

Not forget to En. Soufhwhee bin Abd Rahman, En. Basri and En. Syafiq because gave a lot of guidance and new knowledge to me in providing readership and ideas to the realization of this project. Thank you for your support and helpful suggestions, I will be forever thankful to you.

I also would like to thank all my friends who have been really helpful to complete this project. With a little help of ideas from them, I can complete this report. Not least of all, I owe so much to my whole family for their support that I can achieve so much.

CHAPTER 1

INTRODUCTION

1.0 Background of Study

Activity Based Costing (ABC) is to address the problem of increasing the share that indirect fixed costs such as products cost structure, derived from the process of automatization of the production processes and industrialization. Activity Based Costing (ABC) estimates the costs of resources used consists of set activities to produce service and product. The functions cost estimating is to provide the standards for production efficiency and help control manufacturing cost when to produce or cut the workpiece or product.

This study is conducted in order to justify the quality recognition and cost evaluation based on Activity Based Costing (ABC) for aluminum alloy using CNC laser cutting and water jet machine. Quality recognition is quality based on the surface quality of workpiece by surface roughness and process capability. Cost evaluation is the cost of resources involves the cutting process which is direct labour and indirect labour. Water jet machine cutting used mechanical press cutter to cut the materials while for CNC laser cutting used the thermal cutter to cut the materials.

1.1 Problem Statement

Nowadays, the cutting machine can cut many different materials in terms of different quality and cost. The CNC laser cutting and water jet have been used in the industry to cut the workpiece or produce the product. CNC laser cutting and water jet machine is different types of machine. The CNC laser cutting is cut using laser while water jet using the water when cutting the materials that will produce the different cost and quality.

In UTeM, we have a problem to estimated cost for CNC laser cutting and water jet machine when other industry or company come to UTeM to cut the materials using CNC laser cutting and water jet machine. Also, UTeM has the problem to know the machine will produce the good quality between CNC laser cutting and water jet machine.

CNC laser cutting is a more advanced technology compare water jet machine which they have high energy of laser cut to the workpiece and technical gas of high purity that enables a laser to cut various materials of the cutting using the high point of the laser at the workpiece. Water jets use a high-pressure jet of water to cut the cutting metals or non-metals.

1.2 Objective

The objective of this project is:

1. To evaluate the quality of aluminum alloy using CNC laser cutting and water jet machine.
2. To calculate the operation cost based on Activity Based Costing (ABC).
3. To develop the framework based on Activity-based costing for aluminum alloy using CNC laser cutting and water jet machine.

1.3 Scope

The scopes of this thesis are to evaluate the quality of aluminum Alloy using CNC laser cutting and water jet machine Quality recognition is quality based on the surface quality of workpiece by surface roughness and process capability. Water jet machine cutting used mechanical press cutter to cut the materials while for Laser cutting used the thermal cutter to cut the materials.

This thesis are focused to calculate the operation cost based on Activity Based Costing (ABC). Cost evaluation is the cost of resources involves the cutting process which is direct labour and indirect labour. The operating cost of the CNC laser cutting and water jet machine was predicted the cost of consumable, accommodation or equipment and service will measure in hour condition during operation.
