THE IMPACT OF NEGATIVE ELECTRONIC WORD OF MOUTH (e-WOM) ON  
THE PURCHASE DECISION OF MALAYSIAN DIGITAL NATIVES

YONG ZHI LE

This Report Submitted In Partial Fulfillment of The Requirements For The Award  
Bachelor of Technopreneurship With Honors

Faculty of Technology Management and Technopreneurship Universiti Teknikal  
Malaysia Melaka

JUNE 2019

## DECLARATION

“I hereby declare that this thesis entitle ‘The Impact of negative electronic Word of Mouth (e-WOM) on the purchase decision of Malaysia Digital Natives’ is my own work except for the quotations summaries that have been duty acknowledged”

Signature :

Name : YONG ZHI LE

Date : .....

## **DEDICATION**

This research was dedicated to my parents,

Tan Seok Cheng

And

Yong Kai Thok, who forever in my memories.

## ACKNOWLEDGEMENT

I would like to express my greatest appreciation to my family for their kind cooperation and motivation that helps me in completion of this research. Their encouragement and enthusiasm has guide me through the whole journey in completing this research and report. Besides, their unconditionally love and support had keeping me harmonious and it was the greatest motivation for me to complete this research.

A special gratitude to my final year project supervisor, Madam Mariam Miri, who led and encouraged me along the journey in completing this research. I am highly in debt to madam for her aspiring guidance, friendly advice, invaluable constructive criticism and constant supervision for this whole journey. Besides, I would also like to acknowledge with much appreciation to my panel, Dr. Sabri Bin Mohamad Sharif, for the contribution in stimulating suggestions and kind guidance for the completion of this research.

My deepest gratitude and appreciation also goes to my friends who have willingly helped me out with their abilities and helping me putting pieces together. I am unable to list the names of every one that I have in debt to, but I truly value all those who provided me the possibilities to finish this research and also this report. I will be grateful forever for those support and love.

## ABSTRACT

Word of mouth had ranked as the most effective information source to be rely on by a consumer upon making purchase decision. The traditional word of mouth had been emerged along with the fast changing world into an entirely new form of communication tools, which called electronic Word of Mouth (e-WOM). A few later researches had concluded that the negative e-WOM was having a greater influence than positive e-WOM towards a consumer purchase decision. However, the objectives for this research is to investigate the impact of negative e-WOM towards the purchase decision of Malaysian Digital Natives in skin care industry. The impact of negative e-WOM was investigated in 3 aspects which were the characteristics of negative online review (star rating system, volume of negative online review, depth and length of negative online review and negative visual cues), characteristics of negative online reviewer (tie strength between sender and receiver), and characteristics of website offering product review (website reputation and website information quality). This study is an explanatory research and the result was collected by using quantitative method. Convenience sampling method was using in this research and questionnaire was distributed to the target respondent which was the Digital Natives in Melaka, Malaysia to acquire the result for the study. Therefore, the findings for this research indicated that the three aspects of negative e-WOM which were characteristics of negative product review, characteristics of negative product reviewer and characteristics of website offering product review having a significant relationship with the purchase decision of Malaysian Digital Natives towards skin care products. Therefore, it can be concluded that there was a significant impact of negative e-WOM on the purchase decision of Malaysian Digital Natives towards the skin care product.

## ABSTRAK

*Word of Mouth telah disenaraikan sebagai sumber maklumat yang paling lengkap untuk digunakan oleh pengguna apabila membuat keputusan semasa proses pembelian. Word of Mouth tradisional telah muncul bersama-sama bawah pengaruh dunia yang maju ini dan menjadi alat komunikasi yang baru, yang disebut Word of Mouth elektronik (e-WOM). Beberapa penyelidikan kemudiannya menyimpulkan bahawa e-WOM negatif mempunyai pengaruh yang lebih dalam daripada e-WOM positif terhadap keputusan pembelian pengguna. Walau bagaimanapun, objektif untuk penyelidikan ini adalah untuk menyiasat kesan e-WOM negatif terhadap keputusan pembelian Malaysian Digital Natives dalam industri penjagaan kulit (skin care). Kesan negatif e-WOM telah disiasat dalam 3 aspek iaitu ciri-ciri tinjauan dalam talian negatif (sistem penarafan bintang, jumlah tinjauan dalam talian negatif, kedalaman dan panjang ulasan dalam talian negatif dan isyarat visual negatif), ciri-ciri penilai dalam talian negatif (mengikat kekuatan, tie strength antara penghantar dan penerima), dan ciri-ciri laman web yang menawarkan ulasan produk (reputasi laman web dan kualiti maklumat laman web). Kajian ini adalah penyelidikan penjelasan dan hasilnya telah dikumpul dengan menggunakan kaedah kuantitatif. Kaedah sampling kemudahan telah digunakan dalam kajian ini dan soal selidik telah diedarkan kepada responden sasaran iaitu Natives Digital di Melaka, Malaysia untuk memperoleh hasil kajian. Oleh itu, penemuan untuk kajian ini membuktikan bahawa tiga aspek negatif e-WOM yang mempunyai ciri-ciri peninjauan produk negatif, ciri-ciri penilai produk negatif dan ciri-ciri laman web yang menawarkan kajian semula produk yang mempunyai hubungan yang signifikan dengan keputusan pembelian Malaysian Digital Natives ke arah produk penjagaan kulit. Oleh itu, keputusan tersebut dapat menyimpulkan bahawa kewujudan kesan yang signifikan terhadap e-WOM negatif terhadap keputusan pembelian Malaysian Digital Natives terhadap produk penjagaan kulit.*

## **CHAPTER 1**

### **INTRODUCTION**

#### **1.0 Introduction**

In this chapter, the background of this study will be construct and further explain the current existing situation in the specific industry as regard to the study. Besides, some currently problem that yet to be solve or yet to be settle will also be stated in this study. Next, the research objective and research question will be construct regarding to the problem statement. Significant of study and scope for this research will also be fixed in this chapter.

#### **1.1 Background of Study**

In this emerging world, internet had become the main platform to communicate and to interact. Despite act as a communication tools, it also act as a marketing channel for most of the organization to increase their competitiveness and to meet customer expectation (Tantrabundit et al, 2018). Based on a data from the World Population Statistics, the number of the internet user had increased from around 361 million in December 2000 to more than 3.6 billion users in March 2017. The internet users had exceed half of the population of the world and Asian occupied the largest part of the data (Internet World Statistic, 2017). From that we can tell the potential of the online marketing channel was limitless and ready to be explore.

Word of Mouth was ranked as the most effective information source among the sources that customer rely on during decision making process. The origin of Word of Mouth initiate from the act or idea of person-to-person having their conversation or information sharing as regard to a product or service (Sen & Lerman, 2007; Aslam et al, 2011). However, traditional word of mouth had been emerged along with the fast changing world into an entirely new form of communication tools, so called electronic Word of Mouth (e-WOM).

The consumer trend had been emerge and evolve into an internet prioritize and digitalize decade. Besides, the consumer had embraced the importance of Web 2.0 and fully utilized it in reviewing, commenting, opinion sharing and information collecting. The digital platform were include of weblogs, newsgroups, discussion forums, social network websites, review websites, and online newspaper columns.

According to a data, 77 percent of user read the reviews before making their purchase (Rodela, 2017). A study on consumer behavior also supported that the online review is the key resource for consumer to investigate what to buy and where to go (Ahmed, 2013). Many potential buyers often wait for others' review before making any purchase (Cheung & Lee, 2008). A few studies also shown that e-WOM has a strong direct effect on purchase intention and it also help them in investigating the credibility of the e-WOM (Fan & Miao, 2012; Jalilvand & Samiei, 2012). Through internet, customers can read online recommendations or reviews for the product they are interested in directly at the point of purchase, which can perceived as a key issues that affect consumer's evaluation and purchase decisions (Wang, 2011; Jalilvand & Samiei, 2012).

Unlikely with the traditional Word of Mouth, e-WOM able to present both positive and negative reviews made by the reviewer. The reviewer might be a potential, actual or former buyer for that specific product. It is a reliable source related with the customer insight which business owner or organization can used as a benchmark or measures for improvement or for corrective purpose.

Based on a research, the researcher indicate that negative word of mouth has a significant impact on consumers' attitude and purchase probability than positive word of mouth (Podnar & Javernik, 2012). Instead of only strive hard to focus on getting brand equity, the company should also aware of the impact of negative online Word of Mouth towards the business as the high brand equity can be easily diluted by the negative online reviews and the detriment effect was more important than getting improvement (Jalilvand & Samiei, 2012). The consequences of the negative Word of Mouth will also limited the influence on the effect of posting (Tantrabundit et al, 2018).

According to the data from Department of Statistics Malaysia, the age group of 15-65 was estimated to have an increase to 69.7% in 2018. Malaysia is a young nation had further indicate by the data as the median age for Malaysian is 28.3 in year 2017 and has a potential increase to 28.6 in year 2018. A term 'digital natives' was used to describe the teenage especially the Generation Y. Based on the Cambridge dictionary, digital native means the person who is very familiar with digital technology, computers, etc. because they have grown up with them. As you can tell from the meaning of the terms, digital native has an inseparable relationship with internet or digital world. The term 'digital native' is for those who are born into and raised among new technology and the original definition defined that those who born after year 1980 will be classified as digital natives (Prensky, 2001). A research was then further support the definition from Prensky (2001) and show that the rise of Web 2.0 might have create a second generation of digital natives, which is those who born after year 1990 (Ellen & Rebecca, 2009). These research had supported that most of the Malaysian can be categorized into 'digital natives'.

In the Cambridge dictionary, skin care was defined as 'things you do and use to keep your skin healthy and attractive'. In a survey that, skin care product was being categorized under cosmetic items (Yano Research Institute, 2014). According to statista.com, by the year 2024, the global skin care market was estimated to be reach 180 billion USD. The skin care industry had witnessed a shift from demand from older consumer to younger consumer base. A research also support that the global skin care market is fast growing and expansive. The researcher forecast that the global dermatology

will growing significantly from 2018 to 2028 (Pinder, 2018). A study continue indicate the powerful growth of global skin care industry by showing a data of total revenues of 78 billion USD generated from global skin care industry in year 2011 which also representing a 4.5% of compound annual growth (CAGR) during year 2007 – 2011 (Asiya & Mohd, 2013).

Besides, a findings also indicated that globalization was having a great impact on skin care industry (Swidi et al, 2010). First, internet and communication technology have changed the consumers' preference due to the change in cultural and it had further affect the consumers' behavior. Next, the cultural of modernization and urbanization had influenced consumers' lifestyle and preference, sophisticated consumer are increasingly demanding convenience and functional product and also willing pay for premium brand or more expensive product. Besides, globalization had raised the living standard and increase personal income in developing nation like Malaysia. A findings from Blomert (2009) stated that in developing nation, consumer are more willing to spend large amount of money on personal care and cosmetic product. Lastly, the role of media became important as consumer will influenced by the information they acquired from internet. Blomert (2009) also indicated that the desire of consumer to resemble their favourite star or hero will drive their purchase behavior.

In short, these data and findings had further showing the high demand and the potential of skin care market that still awaited to be seize by all the entrepreneur in the world. The purpose for this paper is to investigate the impact of negative electronic Word of Mouth on the purchase decision of digital natives in skin care industry.

## 1.2 Problem Statement

An assumption of negative information such as negative electronic Word of Mouth have a greater influence than positive information or more specified as positive Word of Mouth (East et al., 2008). A few studies and researches had then indicate that the assumption above was valid and they think that the negative e-WOM is more likely to influence their purchase decision than positive one (Hornik et al, 2015; Leuthi, 2016). A study also state that a company with high brand equity should not only focus on building brand image but have to beware of the impact of negative e-WOM (Jalilvand & Samiei, 2012). So it is important to investigate the impact of negative electronic Word of Mouth on consumer's purchase decision.

As we can tell from the estimation of population age statistics, Malaysian is a young nation with a median age of 28.3 years in year 2017. Next, the findings of MCMC in 2017 also shown that the online shopping activities in Malaysia had increase drastically. The survey revealed that 48.8% of internet users had participated in online shopping in 2016 and this figure was increased as compare with the year before. The survey was then further revealed that 72.3% of online shopper were from the age group of 20 – 40. This was coincide with the definition of digital natives as stated in the background of study. From these data we can strongly believe that the online shopping activities in Malaysia has an inseparable relationship with the digital natives. As the age group of 20 – 40 were promoting most of the online shopping activities, so it is important to study the purchase decision of the digital natives under the impact of negative e-WOM.

According to a research carried out in 2013, Malaysian had spent about 407 million USD on the import of cosmetics and toiletries product United States, Japan and Thailand (Hassali et.al, 2015). The survey had indicate that skin care product was the main driver for the cosmetic market in Malaysia which had contributed 226 million USD in the total value of import. This data was indicated that skin care industry in Malaysia had contribute most of the market share in cosmetic industry. It also shown the potential of consumer purchasing power for Malaysian as regard to the skin care product.

From the problem stated in the pass three paragraph, the impact of negative e-WOM on the purchase decision of Malaysian digital natives in skin care industry is worth giving a further explore.

### **1.3 Research Questions**

To investigate how the digital native will react to negative electronic Word of Mouth in skin care industry. The impact of negative electronic Word of Mouth on digital native's purchase decision in Malaysia will be investigate from three aspects which is from review, from reviewer and from the web site offering online review.

RQ 1: What are the characteristics of negative product review?

RQ 2: What are the characteristics of negative product reviewer?

RQ 3: What are the characteristics of web site offering product review?

RQ 4: What is the relationship between the characteristics of negative electronic Word of Mouth and digital native's purchase decision?

RQ 5: Will the characteristics of negative product review and reviewer influence characteristic of website offering product review?

### **1.4 Research Objectives**

To answer the research questions as mention above, the related research objectives as regards to each research questions was constructed as below:

RQ 1: To study the characteristics of negative product review.

RQ 2: To study the characteristics of negative product reviewer.

RQ 3: To study the characteristics of website offering product review.

RQ 4: To investigate the relationship between characteristics of negative electronic Word of Mouth and digital native's purchase decision.

RQ 5: To investigate the relationship between the characteristics of negative online review and reviewer and the characteristic of website offering product review.

## 1.5 Significant of Study

A finding from MCMC on 2016 determined that the percentage of internet user in Malaysia was 76.9% from the whole population which means approximately 24.6 million users up until year 2016. The survey continues to investigate the percentage of online shopping activities among Malaysian. The survey revealed that the number of internet user involved in online shopping activities increased drastically from 35.3% in 2015 to 48.8% in 2016. This data had indirectly show us that there were tons of information bulking on internet and the potential 24.6 million of digital natives can see all the online reviews on every website. The online market for Malaysia is huge and the impact of Word of Mouth is relatively enormous too. As from the information stated in the background study, electronic Word of Mouth (e-WOM) has a significant effect on consumer's purchase decision. So, it is important to raise the awareness of the impact of e-WOM in Malaysia.

Skincare industry in Malaysia was being chosen as the industry for this research as I found that the cosmetic industry in Malaysia is currently undergo a drastically change. As from the previous data that being stated in the background of study and problem statement, skin care industry in Malaysia was contributed most of the market share in the cosmetic market. It will be meaningful in further explore the impact of negative e-WOM on skin care industry to assist the entrepreneur in Malaysia in handling the issue. Furthermore, the current trend or attitude towards skin care product in Malaysia had changed. The findings from Hassali (2015) stated that women were more prioritize personal grooming product especially for the high income level group. Another trend also
