DEDICATION

This research paper is sincerely dedicated to my supportive father, En Anuar bin Jaamat and my lovely mother, Pn.Zaiton binti Emam Abd Majid, who has been constantly support me and give me the inspiration in doing this research. Besides, towards my supervisor that is dedicated in in instructing and teaching me to do this research.

ACKNOWLEDGEMENT

Alhamdulillah, I praise to Allah for giving me the strength to complete this final year project. This research is successfully completed with the help from a lot of people that assist me during completing this research study.

First and foremost, I would like to thanks and gives my deepest appreciation to my supervisor Madam Nor Ratna binti Masrom for the advises, comments, and encouraging me in completing this project. Even with tight and busy scheduled as a lecturer, but she still manage to spent her time in guiding me for this research study.

Lastly, I would like to thanks my family especially my parent for their support, pray, and encouragement towards me to stay positive and strong in completing this research and also to my sister that also help me during the process. Furthermore, not forget to all my friends that help me a lot and give their support when doing this final year project. Thank You.

ABSTRACT

A study is conducted to the effect of goal-setting in 5S implementation towards employee's motivation, which this study is focusing at the manufacturing organization in Melaka. There are three objectives in this study (i) To identify the highest factors of the goal-setting in 5S implementation among the employees (ii) To identify the relationship of the goal-setting in 5S implementation and employee motivation (iii) To identify the impact of the goal-setting in 5S implementation towards employee motivation. This research used quantitative research method which imply the questionnaire survey item. The data is analyse using SPSS v25 software The population of the targeted respondents is 123 which is targeted towards the employees and employers of the manufacturing company in Melaka, the sample size collected in this research consists of 100 respondents. This research result shows that the independent variable of clarity, commitment, feedback, and task complexity has significant relationship with employee motivation except challenge. This study result can contribute towards the theory of goal-setting relationship with employee motivation for future researcher. Besides, it can also help the managers and manufacturing industry to apply goal-setting theory in enhancing the employee's motivation in the organization.

Keywords: Goal-Setting, 5S implementation, Employee Motivation, Manufacturing company in Melaka

ABSTRAK

Kajian dijalankan ke atas kesan penentuan sasaran dalam pelaksanaan 5S ke arah motivasi pekerja, yang kajian ini memberi tumpuan kepada organisasi pembuatan di Melaka. Terdapat tiga objektif dalam kajian ini (i) Mengenal pasti faktor-faktor tertinggi dalam penentuan sasaran dalam pelaksanaan 5S di kalangan pekerja. (ii) Mengenalpasti hubungan penentuan sasaran dalam pelaksanaan 5S dan motivasi pekerja. (iii) Mengenalpasti kesan penetapan matlamat dalam pelaksanaan 5S ke arah motivasi pekerja. Kajian ini menggunakan kaedah penyelidikan kuantitatif yang membayangkan item soal selidik kuesioner. Data menganalisis menggunakan perisian SPSS v25. Populasi responden yang disasarkan adalah 123 yang disasarkan kepada pekerja dan majikan syarikat pembuatan di Melaka, saiz sampel yang dikumpul dalam kajian ini terdiri daripada 100 responden. Hasil kajian menunjukkan bahawa pembolehubah bebas, komitmen, maklum balas, dan kompleksiti tugas mempunyai hubungan yang signifikan dengan motivasi pekerja kecuali cabaran. Hasil kajian ini dapat menyumbang kepada teori hubungan penetapan matlamat dengan motivasi pekerja untuk penyelidikan masa depan. Di samping itu, ia juga dapat membantu pengurus dan industri pembuatan untuk menerapkan teori penetapan matlamat dalam meningkatkan motivasi pekerja dalam organisasi.

Kata kunci: Penentuan Matlamat, Pelaksanaan 5S, Motivasi Pekerja, Syarikat Perkilangan di Melaka

Chapter 1

Introduction

1.0 Introduction

This chapter will discuss on the background of the study, problem statement, research objective, research question, the scope of the study, limitation of the study, and significance of the study regarding the effect of goal-setting in implementation of 5S on employee's motivation among manufacturing organization in Melaka.

1.1 Background of the Study

The rapid changes due to unstable manufacturing environment have influenced the continuous improvement to have better schedule reinforcement and better organization performance. Mostly, the organization that did not emphasis holistically on business excellence have a higher possibility to fail in getting the profit and fail to sustain in the industry (Jurag et al. 2016). The lean manufacturing method had become more popular in the manufacturing industry to be practice. It is considered as one of the corporate strategies to bring the organization to the forefront of business excellence.

The 5S method is one of the best ways to influence the change of attitude among workers and engaging improvements in the workflow. The 5S name correlates with the first 5 letters of Japanese word consists of Seiri, Seiton, Seiso, Seiketsu, and Shitsuke which equivalent with Sort, Set in order, Shine, Standardize, and Sustain. Takashi Osada views 5S as a strategy for organizational development, learning, and change, oriented towards improves efficiency (Carmen at al. 2015). Employee motivation can be considered as a main factor in the success or failure in an organization (Barrs, 2005). Without motivated employees, the profits, product, morality, and also productivity of an organization will suffer. Therefore, organizations must invest strategic and effective ways to motivate the employee to accept the 5S program.

In Japan, the 5S methodology is practice holistically where it includes management practice training and continuous improvement. It also encourages the participation, involvement, and autonomy of workers which promotes the employees' empowerment in the organization. The process of 5S starting to get more recognition after Toyota implement this methodology. Toyota is known for its excellence in safety, efficient operation, and continuous improvement. They also have emerged as a global leader in automobiles manufacturing (Randhawa & Ahuja, 2017) There are many workplaces in Malaysia especially the automotive manufacturing sector that has started to follow their steps such as Proton and Perodua.

The fact that there are still many manufacturing organizations in Malaysia that have not yet successfully implement 5S or have no knowledge about it. Therefore, for organizations to compete globally they have to consider to practice 5S in their work to achieve business excellence. In the year of 2010, the Compensation Data Manufacturing survey revealed that 69.7% of manufacturing companies apply lean manufacturing in their company (Cristina Veres et al. 2017). The 5S practice can bring a quality environment that emphasizes three main elements on a healthy, comfortable, quality, and productive life for everyone at work (Ho & S.K, 2010).

There is various reason on how 5S can be implemented successfully in the organization, according to Sidhu et al, (2013) there are 4 key factors to successfully implement 5S which includes consistent commitment and support by the top management, education and training, participation of the entire personnel, and standardization to sustain implementation of 5S in long haul basis. There is plenty of literature on how to implement 5S successfully in manufacturing company but there is a very small amount that discusses employees' motivation in implementing it.

1.1 Problem Statement

In today's world, there has been rapid improvement happens in the manufacturing industry to keep pace with the continuous changing in the business environment. For the business to success and sustain in the industry, they have to keep up and adapt to the changes. There is a lot of manufacturing organization that has failed to earn profit and sustain in the industry due to unsystematic workflow and failed to motivate the employees.

Japanese is the example of a country that is known as a very successful in the manufacturing industry due to continuous improvement is done. The concept of 5S that is is being implemented by the Japanese manufacturing sector is still not being properly understood and implemented by the majority of the manufacturing organizations in Melaka. The factories in Melaka are still unaware of the importance of the employee's role can bring towards the organization's success.

The manufacturing organization in Malaysia specifically in Melaka state is still lagging compared to Japan and other advanced countries that practicing 5S in their organization. The top management commitment, employee's active involvement, training, promotional campaign, and guidance regarding the 5S are the crucial factors for the 5S implementation to be successful (Jurag et al. 2016). Moreover, the employees think that 5S activity only involves the committee member in the company, and they even see it as a burden and abstain from implement it (Hartika et al., 2011)

Lack of familiarity with lean concepts often leads to a misunderstanding of the purpose to implement the 5S program. Moreover, manufacturing organizations in Melaka often face the issue of lack in employee's motivation and employee's resistance towards the implementation of 5S. Resistance happens when the workers driven by the beliefs that through the implementation of 5S it can affect the way they already organize their daily working routine which can lead to the subsequent reduction in staff in the pursuit of productivity (Achanga et al. 2006). Therefore, this study is to find out the role of goal-setting on employee's motivation doing the 5S implementation.

1.3 Research Objective

1. To identify the highest factors of the goal-setting in 5S implementation among the employees of manufacturing organizations in Melaka.
2. To identify the relationship of the goal-setting in 5S implementation and employee motivation among manufacturing organizations in Melaka.
3. To identify the impact of the goal-setting in 5S implementation towards employee motivation among the manufacturing organization in Melaka.

1.4 Research Question

1. What are the the highest factors of the goal-setting in 5S implementation among the employees of manufacturing organizations in Melaka?
2. What is the relationship of the goal-setting in 5S implementation and employee motivation among manufacturing organizations in Melaka?
3. What will be the impact of the goal-setting in 5S implementation towards employee motivation among the manufacturing organization in Melaka?

1.5 Scope of the Study

The scope of the study is the goal-setting of 5S implementation in the manufacturing industry that affecting employee motivation. This study is focuses on the manufacturing organization in Melaka, Malaysia. The target respondent will consist of the managers and the employees in the organizations. This study use survey questionnaire method

1.6 Limitation of the study

This research needs a lot of time for the researcher to be able to perform the analysis and collect the data but the time framework is limited to one year to do this research. Thus, the time available to investigate the research problem, and to measure change over time is pretty much constrained. Besides, this study requires cooperation from various parties to respond to this research. It can get hard to receive cooperation from the organization as a student. Moreover, this research will require a lot of money to prepare especially when it is needed the hard copy for the questionnaire. Lack of previous empirical research in lean manufacturing is relatively less in Melaka make this research have an insufficient amount of information. According to (Wong et al., 2009) the studies of lean have been done in Malaysia on how manufacturers are adopting and practice is hard to be found

1.7 Significance of the study

Firstly, this research can help another researcher to increase their knowledge about Locke's goal setting theory and what it can bring towards the organization employee's level of motivation. The data obtained from multiple manufacturing organizations, help to provide a stronger base for theory construction. Secondly, the significance of this study is the understanding regarding the goal-setting in 5S implementation on employee's motivation will assist the manufacturing organization in Malaysia to identify the effect of how they can successfully motivate the employee to accept and adapt to 5S. Besides that, the managers in the organization will know how to successfully implement the 5S practice by reducing wastage and improve productivity to compete with the other manufacturing organization across the world.

The results of this study can help the manufacturing organization in Melaka to realize the importance of 5S and help them to be more effective in investing appropriate time, effort and money for continuous improvement and development of the organization. From this research, managers can pursue some basic strategies to enhance the motivation level among the employee in the office and get their them to be more committed towards the company goals. To make employees feel capable and appreciated, managers should give employees clear and specific goals to achieve and recognize their talent and their hard work in achieving the organization's objectives and goals (Ashley Donohoe, 2018). Furthermore, from this study, the top management will be more aware of the effect of goal-setting that can help in contributing a successful implementation of 5S and as well as informed of the effect that can influence the employees' active involvement in the 5S program.
