\*Jika Laporan PSM ini SULIT atau TERHAD, sila lampirkan surat daripada pihak berkuasa/organisasi berkenaan dengan menyatakan sekali sebab dan tempoh laporan PSM ini

## DECLARATION

I hereby, declared this report entitled Development of Kitchen Gas Leakage Detection Using Arduino To Prevent Unplanned Tragedy is the results of my own research except as cited in references.

Signature: .....

Author : Mogana sundram A/L Tamil selvan

Date: 13/12/2019

## APPROVAL

This report is submitted to the Faculty of Mechanical and Manufacturing Engineering Technology of Universiti Teknikal Malaysia Melaka (UTeM) as a partial fulfilment of the requirements for the degree of Bachelor of Electronic Engineering Technology (Industrial Electronic) With Honours. The member of the supervisory is as follow:

Signature: .....

Supervisor : Pn. Nurliyana Binti Abd Mutalib

Signature: .....

Co-supervisor: En. Shahrizal Bin Saat

## ABSTRAK

Projek ini adalah mengenai Pengembangan Pengesanan Kebocoran Gas Dapur Menggunakan Arduino Untuk Mencegah Tragedi Tidak Dirancang. Di rumah di mana gas petroleum cecair (LPG) dirawat dan digunakan, kebocoran gas mengakibatkan masalah yang serius dan perlu dipertimbangkan. Kebocoran gas mengakibatkan pelbagai insiden yang mengakibatkan kerugian kewangan, kecederaan kepada manusia dan kerosakan harta benda. Tujuan projek ini adalah untuk merekabentuk sistem yang mengesan kebocoran gas dan penggera pengguna dengan menunjukkan penggera dan status, serta mematikan injap bekalan gas sebagai langkah keselamatan utama. Shutdown injap solenoid berhenti aliran gas lebih jauh ke dalam periuk untuk mencegah wabak api daripada cuba menyalakan periuk. Tambahan pula, sistem ini datang dengan pencegahan kebakaran dengan menggunakan pemercik sistem sama. Sistem ini adalah pendahuluan, kerana ia tidak menimbulkan gangguan bunyi dengan amaran yang sentiasa dibunyikan, tetapi pembonceng berhenti bersuara apabila kepekatan gas di sekelilingnya jatuh selepas kebocoran dan membuka semula injap solenoid. Sistem ini akan mengurangkan kecederaan dan kerugian akibat kebocoran gas yang disebabkan oleh letupan dan meningkatkan keselamatan manusia.

## ABSTRACT

This project is all about Development of Kitchen Gas Leakage Detection Using Arduino To Prevent Unplanned Tragedy. At homes where liquid petroleum gas (LPG) is treated and used, gas leakages resulting become a serious problem and need to be considered. Gas leakage results in multiple incidents resulting in financial loss, injury to humans and property damage. The purpose of the project is to design a system which detects gas leakage and alarms the user by showing the alarm and status, as well as switching off the gas supply valve as a primary safety measure. The solenoid valve shutdown stops further gas flow to the cooker to prevent fire outbreak from attempting to ignite the cooker. Moreover, this system comes with fire prevention by using system alike sprinkler. The system is an advance, as it does not establish noise disturbance by constantly sounding warning, but the buzzer stops beeping once the gas concentration in the surrounding drops after leakage and reopen the solenoid valve. This work would reduce injuries and losses due to gas leakage caused by explosions and improve the human safety.

## **DEDICATION**

This dissertation is dedicated to my beloved parents whose unyielding love, support, and encouragement have enriched my soul and inspired me to pursue and complete this project.

## ACKNOWLEDGEMENTS

First of all, I would like to thank my supervisor, Puan Nurliyana binti Abdul Mutalib who gave me golden opportunity to do this wonderful project and also her guiding during my final year project period so that I will be able to finish Final Year Project 1 and Final Year Project 2 with successfully. On this occasion, it helps me in doing a lot of research and I come out with so many new things. In addition, I would like to express my special thanks to my both final year project panels, IR Mohammad' Afif bin Kasno and Madam Izadora binti Mustaffa for their time to evaluate and observe my presentation as well. Furthermore, they recommend and give feedback to improve my project.

In other hand, I would to appreciate my parents who support me financially and helped me a lot in finishing this project. Their advice and motivational words to build up myself. Apart from that, I thank to my friends who have helped with their valuable suggestions and guidance has been helpful in various phase of the completion of the project.

I am making this project not only for marks but to also increase my knowledge as well. Thanks again for those who help me directly or indirectly in completing this project.

# CHAPTER 1

## INTRODUCTION

### 1.1 Background

In the 21<sup>st</sup> century home provides safety and convenience for many people. A smart home comes with many functions, features and system. In every house the need of gas is much considered. For instance, like Liquid Petroleum Gas (LPG), butane and some other. LPG gas leak accidents have occurred due to human error or in other word man-made factors. Gas leakage is very harmful for the safety of human life. The appliance of gas leakage detection system is a best effective solution to avoid leakage of gas. Gas leakage endangers people's life.

There have many cases regarding gas accident in the world due to gas leakage. As reported by statistics of Institute of Japan in appendix 4 from the year of 1972 to 1989 the number of gas accidents increase dramatically and it's decrease from the year of 1990 to 2001. From 2002 to 2012 the number of accidents starts to increase and decrease slightly in the year 2013 to 2016. Meanwhile, in the year 2017 onwards it's started to increase again and it's needs to be considered. In addition to lives, the number of properties damaged because of gas leakage are enormous. Apart from the detection, the controlling of gas leakage plays an important role. Mostly LPG used in houses or manufacturing. In household appliances LPG mainly used for purpose of cooking.

This project is designed to detect LPG and it will aware the user regarding gas leakage. The buzzer will beep loudly to alert the user and shut off the supply from the cylinder. The exhaust fan run after the gas supply has shut off. Meanwhile, the flame

detector will be active always to avoid the fire burn from happen. At the same time, this will help to reduce the explosion accident. This system also helps to detect early of fire before the fires getting spread over every place.
