ABSTRAK

Projek ini adalah mengenai pembangunan Autonomous Robot Controller Smartphone berdasarkan visual untuk mengesan bentuk imej menggunakan Machine Learning. Pada masa kini, sensor telah digunakan di seluruh industry. Image processing adalah salah satu inovasi yang dapat digunakan sebagai sensor. Terdapat banyak robot yang memerlukan kawalan atau pemantauan dari manusia. Projek ini berfungsi dimana robot autonomous akan menggunakan imej masa nyata dan aplikasi tersebut mengandungi Interface Pemrograman Aplikasi Objek TensorFlow (API) yang menggunakan Single Shot Detector (SSD) dengan model pra terlatih yang dilatih menggunakan model MobileNet V2 yang dibangunkan di dataset Google . Imej yang ditangkap akan dibandingkan dengan dataset imej pramuat untuk menentukan output projek. Antaramuka aplikasi akan memberikan skor nama objek dan keyakinan. Peralatan perkakasan utama adalah telefon bimbit sebagai sensor dan pengawal untuk robot Automous, mikrokontroler Arduino Uno digunakan untuk menerima isyarat daripada applikasi di dalam telefon melalui Bluetooth dan dua motor DC digunakan untuk roda robot.

ABSTRACT

This project is about the development of Autonomous Robot based Smartphone Controller for visually to detect shape of image using machine learning. Nowadays, sensors have been used throughout the industry. Image processing is one of the innovations that can be used as sensors. Then, have a many robot needs to be controlled and monitoring by humans and not automated. This project works by the autonomous robot will using capturing real-time images and the application is contained TensorFlow Object Application Programming Interface (API) that uses Single Shot Detector (SSD) with a pre-trained model trained using MobileNet V2 model developed at Google dataset. The captured image will be compared to the preloaded image dataset to determine the project output. The application interface will provide object names and confidence scores. The main hardware equipment is Mobile phone as sensor for Autonomous robot, Arduino Uno microcontroller and two DC motors for wheels of robot.

DEDICATION

To my beloved mother, Miskiah binti Wakijan and my father Abd Wahab bin Jaafar, my siblings and my fellow UTEM friends that supported me in completion of my project proposal for my Final Year Project.

ACKNOWLEDGEMENTS

I begin in the name of Allah, Most Beneficent and Most Merciful. Praise to Allah for providing the strength in the completing this project proposal paper. This project was successfully completed with the support and assistance from various parties. First and foremost, I would like to deliver my gratitude to University Teknikal Malaysia Melaka (UTeM) for giving me valuable opportunity by exposing me in learning and allowing me in conduction this project. Furthermore, to would like to express my appreciation to my supervisor, Mr. Khairul Anuar bin A.Rahman and my Co-supervisor, Mr. Wan NorHisyam bin Abd Rashid for they are dedication in guiding me throughout the process in completing this project. Without they are proper guidance I might not be completing this successfully. Besides that, my peers and family also assist in my. Thank you very much, only Allah knows and reward them.
