BORANG PENGESAHAN STATUS LAPORAN PROJEK SARJANA MUDA

Tajuk: Motion Detection System for Surveillance Monitoring

Sesi Pengajian: 2019/20 Semester 1

Saya **MOHD ILMAM BIN AG. TAJUDIN** mengaku membenarkan Laporan PSM ini disimpan di Perpustakaan Universiti Teknikal Malaysia Melaka (UTeM) dengan syarat-syarat kegunaan seperti berikut:

1. Laporan PSM adalah hak milik Universiti Teknikal Malaysia Melaka dan penulis.
2. Perpustakaan Universiti Teknikal Malaysia Melaka dibenarkan membuat salinan untuk tujuan pengajian sahaja dengan izin penulis.
3. Perpustakaan dibenarkan membuat salinan laporan PSM ini sebagai bahan pertukaran antara institusi pengajian tinggi.
4. **Sila tandakan (X)

SULIT*

Mengandungi maklumat yang berdarjah keselamatan atau kepentingan Malaysia sebagaimana yang termaktub dalam AKTA RAHSIA RASMI 1972.

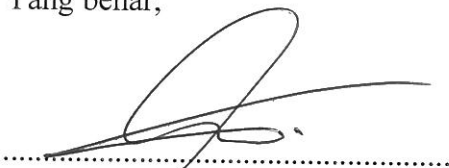

TERHAD*

Mengandungi maklumat TERHAD yang telah ditentukan oleh organisasi/badan di mana penyelidikan dijalankan.

TIDAK

TERHAD

Yang benar,

MOHD ILMAM BIN AG. TAJUDIN

*Jika Laporan PSM ini SULIT atau TERHAD, sila lampirkan surat daripada pihak berkuasa/organisasi berkenaan dengan menyatakan sekali sebab dan tempoh laporan PSM ini

DECLARATION

I hereby, declared this report entitled Motion Detection System for Surveillance Monitoring is the results of my own research except as cited in references.

Signature: 
Author : MOHD ILMAM BIN AG. TAJUDIN
Date: 10 JANUARY 2020

APPROVAL

This report is submitted to the Faculty of Electrical and Electronic Engineering Technology of Universiti Teknikal Malaysia Melaka (UTeM) as a partial fulfilment of the requirements for the degree of Bachelor of Electronics Engineering Technology (Telecommunications) with Honours. The member of the supervisory is as follow:

Signature: 
.....
Supervisor: DR.ROSTAM AFFENDI BIN HAMZAH

ABSTRAK

Projek ini menerangkan tentang sistem pengawasan yang mengesan sebarang gerakan berlaku pada sesuatu kawasan. Sistem ini dikawal oleh mikro pemprosesan Raspberry Pi yang bertindak sebagai komponen elektronik utama berfungsi sebagai memindah data daripada input kamera dan pengesan gerakan kepada output simpanan data iaitu pendrive untuk tontonan masa hadapan dan boleh dipaparkan secara terus melalui paparan skrin monitor. Apabila sebarang gerakan berlaku pada sesuatu kawasan yang dipantau oleh kamera, Raspberry Pi akan menghidupkan pengesan gerakan dan kamera akan mula merekod rakaman sepanjang gerakan itu berlaku. Setelah tiada pergerakan dikesan, kamera akan berhenti merakam dan hasil rakaman akan disimpan pada peranti simpanan untuk tontonan masa hadapan atau boleh dipaparkan terus semasa gerakan objek berlaku. Projek ini sangat bermanfaat kepada pengguna kerana ia tidak merakam sepanjang pemantauan dalam sesuatu tempat dan hanya merakam apabila pergerakan objek berlaku. Dalam masa yang sama ia menjimatkan kadar simpanan data pada peranti simpanan serta projek ini sangat mudah untuk digunakan. Projek ini sangat sesuai untuk kegunaan pengawasan di rumah, pejabat atau premis-premis yang berpotensi berlaku sebarang jenayah.

ABSTRACT

This project presents about a surveillance system that detect any motion occur in target area. This system controlled by Raspberry Pi microprocessor as a main electronic component functioned as transferring data from camera and motion detection input into the thumb drive output for storage data or it can be displayed by monitor screen. When some movement occur in target area through the monitoring camera, Raspberry Pi will turn on the motion detection and the camera will start record the scene during the motion occur. When no motion detected, the camera will stop recording and the recording data will be saved in storage device for future viewing or it can be displayed directly through monitor screen during the motion occur. This project benefit to user because it not recording all the time during surveillance in target area and it only start recording when any movement object occurs. At the same time, it can reduce of storage data device and this project is easy to use. This project very suitable for home surveillance usage, office or any premise that have a criminal potential.

DEDICATION

I would like to dedicated and special thanks to
My beloved father and mother,
To my beloved family, my respected lecturer and fellow friends
And for the rest, might Allah have blessed you
Thanks for all the guided and support

ACKNOWLEDGEMENTS

First and foremost, I would like to say Alhamdulillah and praised to Allah, finally I have success complete my Bachelor Degree Project (BDP) with effort and facing a many challenge during my studies in Universiti Teknikal Malaysia Melaka (UTeM).

Special thanks to my supervisor Ts. Dr. Rostam Affendi Bin Hamzah for the guidelines and teach me during completing my final year project for duration 1 year. May Allah always blessed you and I never forget your advice and guidance during I make a mistake.

Next is I would like to say thank you to my academic supervisor, Madam Gloria Raymond Tanny for the support and advice during my degree study for four years as a student in Electrical Electronic Engineering.

Lastly is I would like to say to my beloved father and mother also my family, this is my present that I can give you because you never stop supporting me and give a motivation to success. May Allah blessed my beloved family.

CHAPTER 1

INTRODUCTION

1.1 Introduction

In this chapter, it will cover about introduction to this project briefly and this chapter discuss about the synopsis of this project, problem statement, objective, scope and significant of this project.

1.2 Project Background

This project Motion Detection System for Surveillance Monitoring is useful for security camera in office, house, factory or every premise. Using this project, it can record when any motion occurs. This system using Raspberry Pi 3 with a camera based circuit and motion sensor. The system will detect a movement and the camera will start recording when it has a motion occur and the motion recording will save in memory and it will be displayed in monitor. The camera input will be processed by Raspberry Pi processor for any motion. If any motion detected, the system will change into alert mode and record the motion occur. Each video that saved in the motion will be viewing later.

1.3 Problem Statement

Nowadays, criminal always happen in many places such as bank robbery, burglary robbery and other premise. It requires a lot of surveillance camera in potentially risky area, but each of the surveillance camera record all the time video and it cause wastage of memory space in storage device. When we want to view back the video, we have to find it all the video play and have to cut which one we want to pick and delete the rest of the videos.
