developed using investment casting process and underwent mechanical testing and micro structural characterization. Result shows a significant weight reduction while fatigue life cycle reached up to 396,000 cycles. New design of FLCA has fulfilled the performance criteria and suitable to be used in a C-segment passenger car.

TOPOLOGY OPTIMIZED DESIGN

Four unique triangular shape with rounded corners to minimize weight, hence increase the structural integrity.

ADAPTABLE BUSH

High Strength Steel sleeve formed by metal stamping process to hold rear bush to the lower arm.

1-SUPER BEAM CHARACTERISTICS

Due to its I-shape of cross section, the body has high moment of inertia and resistance to bending.

ADVANTAGES
Benefit of using new Alumin...

- ✓ Light weight design not the weight, but also been enhance the crashworthiness, stiffness, and NVH (noise, harshness).
- ✓ Good corrosion resistant, high durability of lightweight alloy FLCA reduces the maintenance while reducing the fuel and carbon footprint.
- ✓ Good...
