Signature: .....  
Co-supervisor: Prof. Madya Mohd Ariff Bin Mat Hanafiah

## ABSTRACT

Bedroom is the place to rest and do variety of certain activities personally. Thus, the bedroom able to spread the calmness and become the place to engage tiredness but sometimes the bedroom can enhance the bad mood to its owner. This can be proven as if electrical appliances in the bedroom was forgotten to switch off when being outside of the bedroom or the house. The owner will definitely become worry and anxious. Nevertheless, bedroom nowadays provide a lot of functions that can ease the owner to do things beyond human control through electronic sophistication era and it is called smart bedroom. The purpose of creation of the smart bedroom is to develop a smart bedroom using Arduino which can ease the bedroom user to control all the electrical appliances and monitor the condition in the bedroom. This can be achieved by controlling and monitoring all the electrical appliances and non-electrical appliances in the bedroom from the cell phone only by using Blynk application through WiFi that connected to Arduino Mega 2560 and ESP 8266. As the result, all electrical appliances such as fan, light, air conditioner and all non-electrical appliances such as bed, door, windows and humidity can be controlled and monitored using Blynk application even when outdoors. This can absolutely have a positive impact on its users while also saving energy consumptions. Moreover, many unwanted incidents can also be avoided.

## ABSTRAK

Bilik tidur ialah sebuah tempat untuk berehat dan melakukan pelbagai aktiviti tertentu secara peribadi. Bilik tidur sentiasa memberikan ketenangan dan menjadi tempat untuk melepaskan penat lelah tetapi kadang-kadang bilik tidur boleh menaikkan *mood* yang tidak baik kepada tuannya. Hal ini dapat dibuktikan sekiranya alat-alat elektrik di dalam bilik tidur itu terlupa untuk dimatikan ketika berada di luar rumah. Hal ini boleh mendatangkan kegundahan kepada tuannya. Namun begitu, bilik tidur kini juga menyediakan banyak fungsi-fungsi yang dapat memudahkan tuannya melakukan perkara yang berada di luar kawalan melalui era kecanggihan elektronik dan dipanggil bilik tidur pintar. Tujuan bilik tidur pintar ini dicipta adalah untuk menjana sebuah bilik tidur menggunakan Arduino yang memudahkan pengguna bilik tidur mengawal segala peralatan elektrik dan memantau keadaan di dalam bilik tidur. Hal ini boleh dicapai melalui kawalan dan pemantauan dari sebuah telefon bimbit sahaja menggunakan aplikasi Blynk melalui WiFi yang bersambung dengan Arduino Mega 2560 bersama ESP 8266 untuk berhubung dengan segala peralatan elektrik atau bukan elektrik di dalam bilik tidur itu. Hasilnya, segala peralatan elektrik seperti kipas, lampu, penyaman udara dan segala peralatan bukan elektrik seperti katil, pintu, tingkap, kelembapan dapat dikawal serta dipantau melalui aplikasi Blynk walaupun berada di luar rumah. Hal ini pastinya dapat memberikan impak positif kepada penggunaanya di samping dapat menjimatkan penggunaan tenaga. Lebih-lebih lagi, pelbagai kejadian yang tidak diingini juga dapat dielakkan.

## DEDICATION

To my beloved parents, Nasarudin Bin Mohd Yassin and Faridah Binti Maulid, a million thanks I appointed to each of you as each of you became my strong when I am in weak and support me when I was down. Thank you for being always beside me when I am needed each of you the most. Thank you for support me and became my backbone in writing this thesis report until this report is successfully done. Thank you for showing me a good example when I am in a mess. Thank you for guiding me to the right path and gave me mental supports. Your kindness and love cannot be repaid by me and only wishes and doa can I give to each of you. I wish that each of you will happy ever after and I will promise that I will give my best to become your proud.

## ACKNOWLEDGEMENTS

In the Name of ALLAH, the Most Compassionate, the Most Merciful

First and foremost, I would like to thank and praise ALLAH the Almighty for everything that I received and gained from the beginning of my life until now. I would like to extend my appreciation to Universiti Teknikal Malaysia Melaka (UTeM) especially to my faculty, Faculty of Electrical and Electronic Engineering Technology for providing the research platform.

I want to convey my appreciation to Ts. Gloria Raymond Tanny which is my supervisor in this Bachelor Degree Project of Universiti Teknikal Malaysia Melaka (UTeM), who had non-stop guiding, helping and supporting me writing this thesis report until this report was successfully managed to complete. Not to forget, I also want to convey my appreciation to Prof. Madya Ariff Bin Mohd Hanafiah as my co-supervisor, who had helping and supporting me in making this thesis report succeed. I wish thanks to all of my friends also who had been through thick and thin with me along the mission to complete this thesis report.
