## BORANG PENGESAHAN STATUS LAPORAN

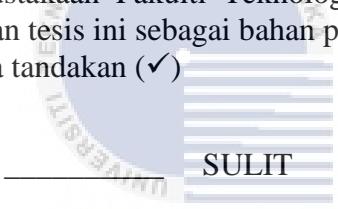

JUDUL: [DEVELOPMENT OF DIY OXIMETER FOR HEALTH MONITORING]

SESI PENGAJIAN: [2020 / 2021]

Saya: \_\_\_\_\_ ENGKU AIMAN ZAKWAN BIN ENGKU ZAIN BIN ENGKU ZAIN \_\_\_\_\_

mengaku membenarkan tesis Projek Sarjana Muda ini disimpan di Perpustakaan Universiti Teknikal Malaysia Melaka dengan syarat-syarat kegunaan seperti berikut:

1. Tesis dan projek adalah hak milik Universiti Teknikal Malaysia Melaka.
2. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan unituk tujuan pengajian sahaja.
3. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan tesis ini sebagai bahan pertukaran antara institusi pengajian tinggi.
4. \* Sila tandakan (✓)

 SULIT

(Mengandungi maklumat yang berdarjah keselamatan atau kepentingan Malaysia seperti yang termaktub di dalam AKTA RAHSIA RASMI 1972)

 TERHAD

(Mengandungi maklumat TERHAD yang telah ditentukan oleh organisasi / badan di mana penyelidikan dijalankan)

\_\_\_\_\_ / \_\_\_\_\_ TIDAK TERHAD

This report is submitted in partial fulfilment of the requirements for the  
**UNIVERSITI TEKNIKAL MALAYSIA MELAKA**  
Bachelor of [Computer Science (Computer Networking)] with Honours.

FACULTY OF INFORMATION AND COMMUNICATION TECHNOLOGY UNIVERSITI  
TEKNIKAL MALAYSIA MELAKA

[2021]

## **DECLARATION**

I hereby declare that this project report entitled  
***[DEVELOPMENT OF DIY OXIMETER FOR HEALTH MONITORING]***  
is written by me and is my own effort and that no part has been plagiarized  
without citations.

STUDENT : \_\_\_\_\_ Date : \_\_\_\_\_

I hereby declare that I have read this project report and found  
this project report is sufficient in term of the scope and quality for the award of  
Bachelor of [Computer Science (Computer Networking)] with Honours.

SUPERVISOR : Nurul Azma Zakaria Date : 11/9/2021  
([DR. NURUL AZMA BINTI ZAKARIA])

## **DEDICATION**

This project is dedicated to Allah Almighty, my creator, pillar, source of inspiration, wisdom, knowledge, and understanding. Through this project, He has been my source of power, and I have only been able to fly on His wings. I also dedicate this work to my parents, Engku Zain Bin Engku Azam and Engku Fauziah Binti Tuan Jalai, my family, sisters, and brother who has encouraged me all the way and whose encouragement has made sure that. I give it all it takes to finish that which I have started. My supervisor, Dr. Nurul Azma Binti Zakaria, and fellow friends are willing to share and guide me along the journey. Thank you. I can never quantify my love for you. God bless you.

## **ACKNOWLEDGEMENTS**

First and foremost, I would like to show my gratitude to all the fantastic individuals who have helped and encouraged me to ensure my initiatives' success. My supervisor, Dr. Nurul Azma Binti Zakaria, deserves special recognition for her diligent and comprehensive supervision throughout the project's completion. For this endeavor, his profound views have brought numerous inspirations and enlightenment.

Next, I would like to offer my heartfelt gratitude to my wonderful family. I am grateful for their unwavering support during this journey. Their support and care gave me confidence and a good attitude while finishing this project. Gratitude also extends to my students, faculty seniors, and anyone who has volunteered to assist me with their skills.

Not to mention, I would like to express my gratitude to my university, Universiti Teknikal Malaysia Melaka (UTeM), for allowing me to put my talents and talents to the test and give me such a fantastic opportunity to show my worth.

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

## **ABSTRACT**

A worldwide health crisis that causes life loss in a few nations across the globe, the Covid-19 pandemic. The Covid-19 pandemic reported a broad variety of symptoms, including as shortness of breath and other symptoms. Necessary action is needed to preserve more lives in this nation or globe. This project involves designing and developing a prototype for easy, succinct, and efficient oxygen saturation and heart rate monitoring utilizing the MAX30100 internet-based sensor (IoT). Specifically, the MAX30100 sensor is designed to measure oxygen saturation and heart rate in the percentage value. C, C++, JavaScript may be used to interface with NodeMCU Microcontroller. Due to the current pulse oximeter, the concept to create this project is very costly, feature restriction, not user-friendly. To finish this project, many actions must be taken as a project process. First, the literature study (prior research) needs to be done to obtain the hardware, software, language, technique utilized in the project. Next, specify the components to utilize and create the hardware and software project. In this stage, the components and design must be suitable to fulfil this project's need to answer the issue statement and achieve the project goal. Next, hardware development starts with the implementation of all software and hardware. Finally, this project's testing and verification will be tested, and the project recorded for verification.

## **ABSTRAK**

Krisis kesihatan di seluruh dunia yang menyebabkan kehilangan nyawa di beberapa negara di seluruh dunia, pandemi Covid-19. Pandemik Covid-19 melaporkan pelbagai gejala, termasuk sesak nafas dan gejala lain. Tindakan yang diperlukan diperlukan untuk memelihara lebih banyak nyawa di negara atau dunia ini. Projek ini melibatkan merancang dan mengembangkan prototaip untuk ketepuan oksigen yang mudah, ringkas dan cekap dan pemantauan degupan jantung menggunakan sensor berdasarkan internet MAOT30100 (IoT). Secara khusus, sensor MAX30100 dirancang untuk mengukur ketepuan oksigen dan denyut jantung dalam nilai peratusan. C, C ++, JavaScript boleh digunakan untuk berinteraksi dengan NodeMCU Microcontroller. Oleh kerana pulse oximeter semasa, konsep untuk membuat projek ini sangat mahal, sekatan ciri, tidak mesra pengguna. Untuk menyelesaikan projek ini, banyak tindakan mesti dilakukan sebagai proses projek. Pertama, kajian literatur (penyelidikan sebelumnya) perlu dilakukan untuk mendapatkan perkakasan, perisian, bahasa, teknik yang digunakan dalam projek. Seterusnya, tentukan komponen yang akan digunakan dan dibuat projek perkakasan dan perisian. Pada peringkat ini, komponen dan reka bentuk mestilah sesuai untuk memenuhi keperluan projek ini untuk menjawab pernyataan masalah dan mencapai matlamat projek. Seterusnya, pengembangan perkakasan dimulakan dengan pelaksanaan semua perisian dan perkakasan. Akhirnya, ujian dan pengesahan projek ini akan diuji dan projek direkodkan untuk pengesahan.

## CHAPTER 1: INTRODUCTION

### 1.1 Introduction

A global health crisis that causes life loss and disrupts economies in a few countries worldwide, the Covid-19 pandemic. People infected with the Covid-19 pandemic reported various symptoms, such as respiratory shortness and other signs. In the exchange of oxygen and carbon dioxide, the breathing system is the organ and other parts involved in breathing. The severely affected patients of COVID-19 require ventilators to survive and meet the oxygen requirement. This project also will monitor people's health.

The DIY Oximeter is an IoT project designed to detect people's heart rate and oxygen saturation because people monitor their health with a laptop and phone. DIY Oximeter will be cheaper compared to the commercial oximeter and smartwatch. It notifies or alerts people when oxygen saturation is below that 94 per cent (Dr Guleria, 2021) that can be an excellent way to check their health. DIY Oximeter also can show and record alert data of previous oxygen saturation. This project is expected to help people who have possibly been infected with Covid-19 by given the alerts to the people and will record the last monitoring health when the oxygen saturation is low because prevention is better than cure. Other than that, this system will reduce the number of cases that involve Covid-19 of a people.

## 1.2 Problem Statement

People may not be sensitive to their health because some people may not be able to buy the commercial oximeter and smartwatch that has been built up to check oxygen saturation in people's bodies. People also may not be sure if their body is healthy because sometimes the oximeter only shows the oxygen saturation data but does not give the alert when their SpO<sub>2</sub> is not in good condition. The current oximeter may not save the data because it builds with hardware only, not including the software. To summarize this, the problem statements for this project are shown in Table 1.1.

**Table 1.1 Summary of Problem Statement**

PS	Problem Statement
PS <sub>1</sub>	The market price of a commercial pulse oximeter is expensive to purchase.
PS <sub>2</sub>	Users are unaware of their oxygen saturation condition in the home and not be able to see the previous data.
PS <sub>3</sub>	Users will not get an alert.

## 1.3 Project Question

They used project research questions to identify questions on monitoring oxygen saturation and heart rate. Based on several studies, it can be concluded that there are some difficulties in determining whether oxygen saturation or Sp<sub>2</sub>O is good or not. Table 1.2 shows the summary of the project question.

**Table 1.2: Summary of Project Question**

PS	PQ	Project Question
PS <sub>1</sub>	PQ <sub>1</sub>	How can you build a low-cost pulse oximeter that gives reliable readings?
PS <sub>2</sub>	PQ <sub>2</sub>	How to determine oxygen saturation condition based on Sp <sub>2</sub> O or heart rate?
