ACKNOWLEDGEMENT

The Faculty would like to extend our gratitude and appreciation to all who have contributed to the success of Academic Handbook Session 2022/2023 completion:

Ir. DR. ZAMANI BIN MD. SANI
DR. AZZIDDIN BIN MOHAMAD RAZALI
Ir. DR. ANUAR BIN MOHAMED KASSIM
DR. AINE IZZATI BINTI TARMIZI
ANIS NIZA BINTI RAMANI
MOHAMAD RIDUWAN BIN MD NAWAWI
DR. MUHAMAD KHAIRI BIN ARIPIN
MOHD WAHYUDI BIN MD HUSSAIN
SITI FATIMAH BINTI KAMARUDIN
NOR-ALIZA BINTI IBRAHIM

And all of the parties involved.

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

VISION

To Be One of the World's Leading Innovative and Creative Technical Universities.

MISSION

UTeM is committed to pioneer and contribute towards the prosperity of the nation and the world by;

1. Promoting knowledge through innovative teaching and learning, research and technical scholarship.
2. Developing professional leaders with impeccable moral values.
3. Generating sustainable development through smart partnership with the community and industry.

MOTTO

Excellence Through Competency.

GENERAL EDUCATIONAL GOALS

1. To conduct academic and professional programmes based on relevant needs of the industries.

2. To produce graduates with relevant knowledge, technical competency, soft skills, social responsibility and accountability.

3. To cultivate scientific method, critical thinking, creative and innovative problem solving and autonomy in decision making amongst graduates.

4. To foster development and innovation activities in collaboration with industries for the prosperity of the Nation.

5. To equip graduates with leadership and teamwork skills as well as develop communication and life-long learning skills.

6. To develop technopreneurship and managerial skills amongst graduates.

7. To instill an appreciation of the arts and cultural values and awareness of healthy life styles amongst graduates.

WELCOMING SPEECH FROM DEAN FACULTY OF ELECTRICAL ENGINEERING

Bismillahir Rahmanir Rahim
Assalamu'alaikum and a Very Good Day

All praises are due to Allah s.w.t, the most Gracious, and with His Mercy the Academic Handbook of Diploma and Bachelor's Degree for the Academic Session of 2022/2023 has been successfully published by the Faculty of Electrical Engineering, Universiti Teknikal Malaysia Melaka.

First, I would like to congratulate all new students on your admission to UTeM and welcome to Faculty of Electrical Engineering. I can assure you that you have come to the right Institution of Higher Learning (IHL) and an exciting learning experience awaits you at this faculty.

In line with the faculty's motto "Towards Academic Excellence", we strive hard to produce a competent, capable, knowledgeable and ethical human capital that is able to assist the government and the industry in pushing our country towards better economy and lifestyle. In order to achieve this, the faculty has implemented Outcome Based Education (OBE) curriculum since July 2010. We hope this approach will better equip our students with the required skills upon their graduation.

This year, the faculty offers three (3) undergraduate programmes, i.e., Diploma of Electrical Engineering (DEK), Bachelor of Electrical Engineering with Honours (BEKG) and Bachelor of Mechatronics Engineering with Honours (BEKM). All programs are recognised by the Board of Engineers Malaysia (BEM) and Malaysia Qualification Agency (MQA). The Diploma of Electrical Engineering (DEK) is accredited by the Engineering Technology Accreditation Council (ETAC), whilst both of our degree programmes are accredited by the Engineering Accreditation Council (EAC).

This handbook provides a brief overview about the faculty, curriculum structure, academic advisory system, university grading system and syllabus contents of various programmes, which serves as a reference for the new intake of Academic Session of 2022/2023. Hopefully, it will provide guidance for students in planning their studies systematically in order to achieve academic excellence and eventually graduate on time with good grades.

Last but not least, I would like to extend my thanks and gratitude to all the committee members for their hard work, support and effort towards publishing this handbook.

Wassalam.
"Towards Academic Excellence"

FACULTY AT A GLANCE

Faculty of Electrical Engineering (FKE) was established in early 2001 and officially began to operate from 22nd June 2001 after obtaining an authorization from Malaysia Ministry of Education. Initially, the faculty's temporary campus was situated at Taman Tasik Utama, Ayer Keroh and later was allocated to the UTeM's main campus at Durian Tunggal.

In order to uphold the academic pillar that being decended to the faculty, a managerial team leaded by Dean was established and assisted by three (3) Deputy Deans, three (3) Heads of Department, three (3) Program Coordinator and two (2) Senior Assistant Registrar. Other than that, the combination of lecturers that excel in various fields provide a strong academic background inside faculty as well as high commitment in educating our new generation to become outstanding graduates that equipped with knowledge, technical competencies and well versed soft skills.

The Faculty of Electrical Engineering offers three (3) Undergraduate Programmes and three (3) types of Postgraduate Programmes:

Undergraduate Programmes:
1. Bachelor of Electrical Engineering with Honours (BEKG)
2. Bachelor of Mechatronics Engineering with Honours (BEKM)
3. Diploma of Electrical Engineering (DEK)

Postgraduate Programmes:
1. Electrical Engineering & Mechatronics Engineering (Research Mode)
   a) Doctor of Philosophy (Ph. D)
   b) Doctor of Engineering (D. Eng)
   c) Master of Science (M.Sc.)

2. Electrical Engineering (Mixed-Mode)
   a) Master of Electrical Engineering (Industrial Power) - MEKP

3. Electrical Engineering (Taught Course Mode)
   a) Master of Electrical Engineering – MEKG
   b) Master of Mechatronics Engineering – MEKH

FACULTY MISSION, MOTTO AND OBJECTIVES

FACULTY'S MISSION

The Faculty's mission is to provide quality technical education and professional services through broad-based knowledge, innovation and creativity based on expertise and latest technology in enhancing excellent work culture, mutual understanding and cooperation while upholding moral values in line with the national aspirations.

FACULTY'S MOTTO

Towards Academic Excellence

FACULTY'S OBJECTIVES

1. To conduct academic programs recognized by professional bodies that meet the global standards.
2. To produce competent and responsible professionals.
3. To provide balanced academic programs in terms of theory and practical based on Outcome Based Educations (OBE).
4. To enhance smart partnerships between the Faculty with the industry through services, consultancies, and research activities.
5. To create a conducive teaching and learning environment.
6. To produce knowledgeable, outstanding visionary individuals instilled with moral values.
7. To promote a culture of publication amongst academics.

CURRICULUM STRUCTURE

DIPLOMA PROGRAMME

During the first year of study, the student will be equipped with fundamental courses such as mathematics, science and computer programming to provide the foundation for learning engineering courses. The student also taking introduction of electrical and electronic courses. After that, during the second year, the student shall continue learning core programme courses and undertake the diploma project. Finally, during the third year, students are required to undergo an Industrial Training for 16 weeks.

BACHELOR PROGRAMMES

The Faculty of Electrical Engineering (FKE) offers full time 4-year undergraduate programmes leading to the degree award of Bachelor of Electrical Engineering with Honours and Bachelor of Mechatronics Engineering with Honours. The curriculum has been developed in-line with the University's and Faculty's missions and the Program Educational Objectives (PEO)s. The academic curriculum aims of producing competence graduates that satisfy the industry needs. In addition, the effectiveness and quality of the curriculum through the educational content, teaching and learning are constantly monitored with appropriate assessment methods.

The academic curriculum of the Bachelor Programmes consists of both engineering and non-engineering courses. The key elements of the curriculum include the laboratory work, industrial training, integrated design project and final year projects. In addition, engineering application, integrated exposure to professional engineering practice, including management and professional ethics are also part of the programme's curriculum. In order to expose the students to engineering practice, technical talks by guest lecturers from industry, industry visits, and courses on professional ethics and conduct, are also included.

The University's compulsory courses included English for Academic Purpose, Academic Writing and English for Professional Interaction, Ethnic Relation, and Tamadun Islam dan Tamadun Asia. On the other hand, students are exposed to the third language, engineering management skills, entrepreneurship, communication skills, co-curricular activities and personality development in order to produce engineers who are competent and able to work independently with positive attitudes.

The University offers professional certification preparatory course to increase the value and marketability of the graduates, relevant to the needs of the industries. The objectives of this course are:

- To increase the student competency in skills that are relevant to his / her future career;
- To increase the student competitiveness in securing jobs after graduation;
- To support the University initiative in producing holistic and balanced graduates in line with the first shift of the Malaysia Education Blueprint (Higher Education) 2015-2025.

The professional certification preparatory course is compulsory for all bachelor degree students registered with the University starting from 2017/2018 intake and onwards. The students are expected to choose, register and complete one (1) professional certification preparation course before the end of their study. The Faculty will offer Basic Hydraulic Technology Certification Course (BEKG 4710) and Programmable Logic Controller (PLC) Level 1 & 2 (BEEE 3210) from session 2019/2020.

As one of the world leading specialists for Drive and Control technology, Rexroth has a unique technologic expertise to be transferred to participants worldwide. Endorsed by the Drive & Control Academy Würzburg in Germany, a Basic Hydraulic Technology certification course provides participants with a basic hydraulic technology. In this certification course, participants will have experienced fundamental knowledge in hydrostatics, design of a hydraulic systems, graphical symbols, hydraulic fluids, hydraulic pumps and motors, hydraulic cylinders and hydraulic valves. Industrial related project will be exposed to the participants in order to imitate the real industrial environment employing hydraulic technologies. The duration of this course is 3 days.

OMRON Electronics is a leading electronics company from Japan that has been established for more than 20 years in Malaysia. In Malaysia, OMRON PLC technology is used by many companies in the manufacturing industry for process control and automation as well as the development of Industrial Revolution 4.0 technology. This course is designed to provide participants with the fundamental and hands on knowledge of Programmable Logic Controller (PLC) that used in the various field of automation industry. Participants would be exposed to theoretical and practical session about Programmable Logic Controller (PLC) from performing wiring diagram for input and output devices and develop a ladder diagram using its programming software for a specific industrial automation application task.

On top of that, faculty offers professional certification preparatory course for Electrical Energy Management that embedded in the Energy Utilization and Conservation course (BEKP 4853). The course is outlined and approved by Suruhanjaya Tenaga and the students will benefit from the full appreciation of the regulation and develop the management skills required for an Energy Manager towards facilitating the green aspiration of our nation. Students who obtained at least grade B+ in the Energy Utilization and Conservation course and CGPA ≥ 2.5 will be awarded with a Certificate of Energy Management. Graduates who hold this certicate can apply to be a Registered Electrical Energy Manager (REEM) certified by the Suruhanjaya Tenaga with the following additional requirements:

i. one (1) year of working experience in the related field and
ii. submit a report related to item (i)

ADMISSION REQUIREMENTS

MINIMUM REQUIREMENTS TO REGISTER IN DIPLOMA PROGRAMME

FOR SPM HOLDERS	
General Requirements	1. Citizen of Malaysia; and 2. Pass in Sijil Pelajaran Malaysia or its equivalent with minimum **FIVE (5)** credits including **Bahasa Melayu/Malaysia** 3. **Pass in History (SPM 2013 and above)**
Programme Specific Requirements	1. Fulfilled the Universities General Requirements with **FOUR (4)** credits **(Gred C)** in the following subjects: • Mathematics • Additional Mathematics • Physics And either one (1) of the following subjects: • Chemistry • Biology • Science • Additional Science • Teknologi Kejuruteraan/Asas Kelestarian • Pengajian Kejuruteraan Elektrik dan Elektronik • Lukisan Kejuruteraan • Pendidikan Seni Visual/Reka Cipta • Sains Komputer • Grafik Komunikasi Teknikal 2. Pass in English Language **AND** 3. The applicant must not a color blind or physically disabled which impair to complete practical assignments.

MINIMUM REQUIREMENTS TO REGISTER IN BACHELOR PROGRAMMES

FOR DIPLOMA/EQUIVALENT HOLDERS	
Universities General Requirements	**Pass in Sijil Pelajaran Malaysia (SPM)**/equivalent with a credit in Bahasa Melayu/ Bahasa Malaysia or Bahasa Melayu/Bahasa Malaysia July paper and Pass in History (SPM 2013 and above) **And** **Diploma or other qualification recognised as equivalent** by the Government of Malaysia and approved by the University's Senate **Or** Pass in **Sijil Tinggi Persekolahan Malaysia (STPM) year 2021 or previous STPM** with at least PNGK 2.00 and: • **C Grade (NGMP 2.00)** in General Studies; and • **C Grade (NGMP 2.00)** in **two (2) other subjects** **Or** Pass in **Matriculation 2019 or previous examination** with **at least a CGPA of 2.00** **Or** Pass in **GCE A- Level with at least 9 points** and applicants is under sponsorship JPA/MARA **Or** Pass in Diploma **International Baccalaureate (IB)** with at least 24 points and applicants is under sponsorship JPA/ MARA. **And** A minimum of **Band 2** in Malaysian University English Test (MUET) **Or** Obtained at least **500 in Test of English as a Foreign Language (TOEFL)** and **Band 5.5 in International English Language Testing System (IELTS)** [For students GCE A-Level & Diploma International Baccalaureate only].

FOR DIPLOMA/EQUIVALENT HOLDERS	
Programme Specific Requirements	**1. Candidates from Diploma (Science Category)** Pass a **Diploma in Engineering** with at least a **CGPA of 3.00** in a related field from a recognized institution and approved by the University's Senate; **and** Credit exemption is subject to the discretion and approval by the Faculty; **and** Passed/ completed studies at Diploma level prior to the application's dateline **Or** Pass a **Diploma in Technology Engineering** with at least **CGPA 3.30** in a related field from a recognized institution and approved by the Univeristy's Senate; and Credit exemption is subject to the discretion and approval by the Faculty; **and** Passed/ completed studies at Diploma level prior to the application's dateline; **and** **Or** Pass in **Sijil Tinggi Persekolahan Malaysia (STPM) year 2021 or previous STPM** with at least PNGK 2.50; **and** Obtained in Sijil Tinggi Persekolahan Malaysia (STPM) with at least **C Grade (NGMP 2.00)** in all of the following subjects: • General Studies • Mathematics (T)/ Mathematics (M) • Chemistry • Physics **Or** • General Studies • Mathematics (T)/ Mathematics (M) • Chemistry • Biology and obtained at least credit (Grade 4B/B) in Physics in Sijil Pelajaran Malaysia (SPM) **Or** Pass in **MOE Matriculation/ UM Foundation/ UiTM Foundation year 2019 or previous STPM** with at least **CGPA 2.50 and**

FOR DIPLOMA/EQUIVALENT HOLDERS	
	Obtained at least Grade C (2.00) in in Matriculation KPM/Asasi Sains UM/Asasi UiTM in each of the following subjects: - • Mathematics/Engineering Mathematics • Physics/Physics (Engineering)/ Engineering Science • Chemistry/Chemistry (Engineering)/Basic Engineering **Or** • Mathematics • Chemistry • Biology and obtained at least credit (Grade 4B/B) in Physics in Sijil Pelajaran Malaysia (SPM) **Or** Pass in GCE A- Level with at least Grade C (2.00) in each of the following subjects: - • Mathematics • Physics; and • Any one (1) subjects in GCE A-Level **Or** Pass in Diploma International Baccalaureate (IB) with at least GRED 4 in each of the following subjects: - • Mathematics • Physics; and • Any one (1) of the subject at Diploma International Baccalaureate (IB) **And** The applicant must not be color blind or physically disabled which impairs to complete practical assignments

FOR MATRICULATION SCIENCE KPM/ASASI SAINS UM/ASASI UiTM HOLDERS	
Universities General Requirements	Pass in **Sijil Pelajaran Malaysia (SPM)**/equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or Bahasa Melayu/Bahasa Malaysia July Paper; and Pass in History (SPM 2013 and above) **and** Pass in MOE Matriculation/UM Science Foundation/UiTM Foundation **with CGPA of at least 2.00; and** Obtained at least **Band 2** in the Malaysian University English Test (MUET).
Programme Specific Requirements	**1. Candidates From KPM Technical Matriculation** Obtained at least CGPA 2.50 in Matriculation/Foundation; **And** Obtained at least Grade C (2.00) in in Matriculation/Foundation in each of the following subjects: • Mathematics • Physics (Engineering) • Chemistry (Engineering)/Basic Engineering **And** The applicant must not be color blind or physically disabled which impairs to complete practical assignments. **2. Candidates from Matriculation Sains KPM/Asasi Sains UM/Asasi UiTM** Obtained at least CGPA 2.50 in Matriculation/Foundation; **And** Obtained at least Grade C (2.00) in Matriculation/Foundation in each of the following subjects: • Mathematics • Chemistry • Physics **Or** • Mathematics • Chemistry • Biology and obtained at least credit (Grade B) in Physics in Sijil Pelajaran Malaysia (SPM) **And** The applicant must not be color blind or physically disabled which impairs to complete practical assignments.

FOR MATRICULATION SCIENCE KPM/ASASI SAINS UM/ASASI UiTM HOLDERS	
Programme Specific Requirements	**3. Candidates from Asasi Kejuruteraan UiTM** Obtained at least CGPA 2.50 in Matriculation/Foundation; **And** Obtained at least Grade C (2.00) in in Matriculation/Foundation in each of the following subjects: • Mathematics • Physics • Chemistry **And** The applicant must not be color blind or physically disabled which impairs to complete practical assignments.

FOR STPM HOLDERS	
Programme Specific Requirements	Pass in **Sijil Pelajaran Malaysia (SPM)**/equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia July Paper and Pass in History (SPM 2013 and above) **And** Pass in **Sijil Tinggi Persekolahan Malaysia (STPM)** with CGPA of at least 2.00 and obtained at least: • C Grade (NGMP 2.00) in **General Studies;** and • C Grade (NGMP 2.00) in **two (2)** other subjects, and Obtained at least **Band 2** in the Malaysian University English Test (MUET).
Programme Specific Requirements	Obtained at least CGPA 2.50 in STPM; **And** Obtained in **Sijil Tinggi Persekolahan Malaysia (STPM)** with at least C Grade (NGMP 2.00) in all of the following subjects: • Mathematics T/Further Mathematics (M) • Physics • Chemistry **Or** • Mathematics T/Further Mathematics (M) • Chemistry • Biology and obtained at least credit (Grade 4B/B) in Physics in Sijil Pelajaran Malaysia (SPM) **And** The applicant must not be color blind and not physically disabled which impairs to complete practical assignments.

GRADING SYSTEM

Student's performance in every course is evaluated based on the grade obtained. Grading system is shown in **Table 1**.

Generally, minimum passing grade for a course is Grade D. However, grade D up to C- are categorized as conditional pass and the students are allowed to improve their grade by repeating the course only once.

Table 1: Grading System and Point

GRADE (ACHIEVEMENT)	RELATIONS BETWEEN MARKS PERCENTAGE AND GRADE POINT	
	MARKS PERCENTAGES	GRADE POINT
A (Excellent)	80 – 100	4.0
A- (Excellent)	75 – 79	3.7
B+ (Honours)	70 – 74	3.3
B (Honours)	65 – 69	3.0
B- (Pass)	60 – 64	2.7
C+ (Pass)	55 – 59	2.3
C (Pass)	50 – 54	2.0
C- (Conditional Pass)	47 – 49	1.7
D+ (Conditional Pass)	44 – 46	1.3
D (Conditional Pass)	40 – 43	1.0
E (Fail)	0 – 39	0.0

GRADUATION REQUIREMENT

PROGRAMME	GRADUATION REQUIREMENT
Diploma of Electrical Engineering	Award of a Diploma will be made in two (2) regular semesters. Students are only eligible to be awarded a Diploma after the following conditions are met: i. Students must obtain Kedudukan Baik (KB) in the last semester. ii. Minimum credit hours requirements for the award of a Diploma is 90 credits which consists of 70 credits of Core Program (P) courses including 8 credits of Industrial Training, 14 credits of Compulsory University (W) courses and 6 credits for Elective (E) courses. iii. Has applied for the award, recommended by the Faculty and approved by the Senate. iv. Other requirements set by the university.
Bachelor of Electrical Engineering with Honours	Award of a Degree will be made in two (2) regular semesters. Students are only eligible to be awarded a Degree after the following conditions are met: i. Students must obtain Kedudukan Baik (KB) in the last semester. ii. Passed all courses required for curriculum requirements: • Minimum credit hour requirements for the award of a Degree is 135 credits hour which consists of 103 credits of Core courses (P), 9 credits of Elective Program (E) courses, 4 credits of Elective University (E) courses, 5 credits of Industrial Training (P) and 14 credits of University Requirements (W) courses. iii. Has applied for the award, recommended by the Faculty and approved by the Senate. iv. Other requirements set by the university.
Bachelor of Mechatronics Engineering with Honours	Award of a Degree will be made in two (2) regular semesters. Students are only eligible to be awarded a Degree after the following conditions are met: i. Students must obtain Kedudukan Baik (KB) in the last semester. ii. Passed all courses required for curriculum requirements: • Minimum credit hour requirements for the award of a Degree is 135 credits hour which consists of 106 credits of Core courses (P), 6 credits of Elective Program (E) courses, 4 credits of Elective University (E) courses, 5 credits of Industrial Training (P) and 14 credits of University Requirements (W) courses. iii. Has applied for the award, recommended by the Faculty and approved by the Senate. iv. Other requirements set by the university.

GRADUATES CAREER PROSPECTS

DIPLOMA IN ELECTRICAL ENGINEERING

Demands for semi-professional level labour forces that are trained in electrical engineering are extremely high especially in the industrial sector. To respond to that, UTeM's Electrical Engineering diploma graduates are groomed with practical and application oriented knowledge so that they will be highly competitive in fulfilling the workforce markets.

BACHELOR IN ELECTRICAL ENGINEERING AND MECHATRONICS ENGINEERING

Vacancies within the industries for engineers that are skilled and practical-oriented is on the rise. Lots of highly trained workforces in the entire engineering sector including Industry Power, Control, Instrumentation and Automation, Power Electronics and Drive and Mechatronics in professional level are required. Job opportunities for UTeM graduates in these fields will be more desirable by the industry once they have been equipped with the technical knowledge and strong practical skills.

Field of works for Bachelor of Electrical Engineering and Mechatronics Engineering graduates include:

- Semiconductor manufacturing industries
- Electrical items manufacturing
- High and Low Voltage components manufacturing
- Renewable Energy sector
- Oil and Gas Industries
- Consultancies Companies
- High technology industries such as aerospace industries
- Automation System manufacturing industries
- Biomedical Engineering Firms
- Software Development Sector
- Research and development Sector

Some of the career fields that are suitable include Process and Manufacturing Engineer, Design and Research Engineer, Consultancies Engineer, Testing and Quality Engineer, System Engineer and Academicians.

SOFT SKILLS (KI)

Soft skills can be defined as the generic skills which have been identified as very critical in the global working environment apart from the fast pace of technological advancement.

The elements of Soft Skills that must be developed and implemented by each student are as follows:

1. Communication Skills (CS)
2. Creative Thinking and Problem Solving Skills (CTPS)
3. Teamwork Skills (TS)
4. Continual Learning and Information Management (LL)
5. Entrepreneurship Skills (ES)
6. Professional Ethics and Moral Values (EM)
7. Leadership Skills (LS)

Structure of Soft Skills Development in Institutional of Higher Learning Education:

1. Soft Skills Development via Formal Teaching and Learning Activities:
   - Stand Alone Course Model
   - Embedded Model
   - Combination of Embedded Model & Stand-Alone Course Model

2. Soft Skills Development via Supporting-Oriented Programme
   - Academic-Focused Supporting Programme
   - Non-Academic-Focused Supporting Programme

3. Soft Skills Development via Campus Activities and Lifestyle
   - Residential College
   - Campus Environment

ACADEMIC ADVISORY SYSTEM

In UTeM students are free to take courses offered by the Faculty at every semester based on their capability, as long as they comply with the rules and regulations set up by the Faculty and university academic rules. Students need to plan their own study carefully with the guide of their Academic Advisor during their study in the university.

CHARACTERISTICS OF THE SEMESTER SYSTEM

- Students are free to take any courses offered in each semester sequentially based on their ability and conditions of course selection determined by the Faculty and university's academics regulations.
- Students should plan programs of study and learning appropriate which will need the advices from Academic Advisor during the studies.
- Students who obtained UM (Ulang Mata pelajaran) status for a given course (Grade E), should retake the course in the following semester or when offered by the faculty.

THE IMPORTANCE OF AN ACADEMIC ADVISOR (PA)

- Students need to be given a proper advice in term of courses taken under the semester system, where they are free to determine the number of courses to be taken based on their capability or in the case the student obtained a Conditional Position in the previous semester. They need to plan carefully to take courses which are suitable for them to carry and fully aware on its implication to their whole study period in the university.
- Semester system is a flexible system for a student with high, moderate or less capability to complete their study based on their own capability comply to the maximum study period set up by the university.
- The Academic Advisor is able to provide an advice not only in the academic matter, but also in the aspects of how the students can adapt themselves to the semester system, culture shock of studying in the university, time management and private matters that may affect the students' study performance.
- In the condition where the student is not with the same batch of other students during the study period due to difference in the courses taken, difficulty may be expected for him/her to discuss on the matter of study with the others. Here, the Academic Advisor is importance to provide a proper guidance.

ROLES AND RESPONSIBILITIES OF STUDENT AND ACADEMIC ADVISOR/PENASIHAT AKADEMIK (PA) IN THE ACADEMIC ADVISORY SYSTEM ARE AS FOLLOW:

Roles/Responsibilities of Academic Advisor/ Penasihat Akademik (PA)	Roles/Responsibilities of Student
• Conduct a meeting with the students at least two times for every semester.	• Always be open minded when meeting with the Academic Advisor.
• Make sure to student understand the academic system in UTeM.	• Attend meeting with the Academic Advisor at least two times for every semester.
• Provide an advice and make sure student's courses registration is based on his/her current academic result.	• Make the Academic Advisor as a mentor and always get an advice on the academic matter.
• Supervise the student study progress and provide guidance in making a good study planning.	• Make sure to have a good understanding on the academic system.
• Provide student to always be motivated in their study etc.	• Provide a copy of examination result to the Academic Advisor at each semester.
• Supervise the student record and file to be always updated – make sure no course is missed to fulfil the requirement for degree award.	• Get the certification of registration form, copy of certificates and reference letter from the Academic Advisor.
• Refer the student to the head of department for further action if necessary.	• Always keep a record on all courses that already been taken during the period of study to prevent missed course and fulfill the requirement for degree award.
• Advice &monitor the student to keep record of their obtained grades for a given course as shown in Appendix A, B & C (Student Audit Form).	• Students are required to keep record of their obtained grades for a given course as shown in Appendix A, B & C (Student Audit Form).

FLOW OF ACADEMIC ADVISORY SYSTEM IN UTeM

1. Academic Advisor/ Penasihat Akademik (PA)
2. Head of Department
3. Deputy Dean (Academic)
4. Dean

LISTS OF THE FACULTY'S EXTERNAL EXAMINER, VISITING PROFESSOR, ADJUNCT PROFESSOR AND INDUSTRIAL ADVISORY PANEL

List of External Examiner

EXTERNAL EXAMINER	QUALIFICATIONS	APPOINTMENT PERIOD	DEPARTMENT
Prof. Ir. Dr. Hazlie Bin Mokhlis	The University of Manchester, UK PhD in Electrical Engineering	01.08.2021 - 31.07.2023	BEKG
Prof. Ir. Dr. Khairul Salleh Bin Mohamed Sahari	Kanazawa University, Japan PhD in Engineering	01.09.2022 - 31.08.2024	BEKM
Prof. Madya Ir. Dr. Ahmad Farid Bin Abidin	Universiti Kebangsaan Malaysia PhD in Electrical Engineering	01.10.2021 - 30.09.2023	DIPLOMA
Prof. Dr. Amir Akramin Bin Shafie	University of Dundee, United Kingdom PhD in Mechatronics Engineering	01.12.2021 - 30.11.2023	MEKH
Prof. Ir. Ts. Dr. Ismail Bin Musirin	Universiti Teknologi MARA PhD in Electrical Engineering	01.12.2021 - 30.11.2023	MEKG

List of Industrial Advisory Panel

INDUSTRIAL ADVISORY PANEL	POSITION	APPOINTMENT PERIOD	DEPARTMENT
Dr. Ir. Kenny Ang Teoh Ong	Post: Director Company: Control Easy Technology Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Mr. Chai Seang EE	Post: Managing Director Company: Hitachi Cable (Johor) Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Mr. Mohammad Faizal Ali	Post: Co-Founder and CEO Company: Vectolabs Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Ir. Dr. Harriezan Ahmad	Post: Factory Manager/Director Company: Distribution Division, TNB	01.09.2021 - 31.08.2023	BEKG

INDUSTRIAL ADVISORY PANEL	POSITION	APPOINTMENT PERIOD	DEPARTMENT
Ir. Mohd Tajudin Romli	Post: Managing Director Company: TRMS Engineering Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Ir. Mohd Yusrizal Mohd Yusof	Post: Managing Director Company: TNBRenewables Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Ir. Rajmal Buang	Post: Director Company: RBW Engineering Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Ir. Ts. Mohd Azlan Othman	Post: Chief of Electrical Engineer Company: JKR Melaka	01.09.2021 - 31.08.2023	BEKG
Ir. Zaki Kudus	Post: Managing Partner Company: AHAR Consultants Sdn. Bhd.	01.09.2021 - 31.08.2023	BEKG
Mr. Mohd Farius Sahari	Post: Senior Manager Company: Samsung SDIEM	01.09.2021 - 31.08.2023	BEKG
Ir. Lin Shon Nyin	Post: Deputy Head Company: Health, Safety and Environment, TNB	01.09.2021 - 31.08.2023	BEKG
Ir. Badrul Hisham Abdul Kahar	Post: Director & Chief Executive Officer Company: Xcel Itech Sdn. Bhd.	01.12.2020 - 30.11.2022	BEKM
Mr. Aminuddin Mohd Tayeb	Post: Managing Director, Company: East Automation & Engineering Sdn. Bhd.	01.12.2020 - 30.11.2022	BEKM
Dr. Muhammad Sufyan Basri	Post: Chief Customer Services Officier Company: Augmented Technology Sdn. Bhd.	01.12.2020 - 30.11.2022	BEKM
Mr. Norazam Ismail	Post: Lean Six Sigma Manager Company: Ansell N.P Sdn. Bhd.	01.12.2020 - 30.11.2022	BEKM
Dr. Hairi Zamzuri	Post: General Manager Company: eMooVit Technology Sdn. Bhd.	01.12.2020 - 30.11.2022	BEKM

INDUSTRIAL ADVISORY PANEL	POSITION	APPOINTMENT PERIOD	DEPARTMENT
Ir. Dr. Badril Hisham Bin Abu Bakar	Post: Deputy Director Company: Engineering Research Centre, MARDI	01.12.2020 - 30.11.2022	BEKM
Ts. Dr. Mohd Hanafee Zin	Post: Research Analyst Company: Aerospace Malaysia Innovation Centre, AMIC	01.12.2020 - 30.11.2022	BEKM
Mr. Awangku Khairul Ridzwan Bin Awangku Jaya	Post: CEO Company: AURO Technologies PLT	01.12.2020 - 30.11.2022	BEKM
Mr. Vasanthan a/l Sakthi Velu	Post: Assistant Project Manager Company: Tan Chong Management Services Corporation Sdn. Bhd.	01.12.2020 - 30.11.2022	BEKM
Ir. Effendy Bin Muhamad @ Muhamad Yasin	Post: Principal Company: Enhill Consultant	01.09.2021 - 31.08.2023	DIPLOMA
Ir. Azizi Ahmad	Post: Manager Company: DAR Energy Sdn. Bhd.	01.09.2021 - 31.08.2023	DIPLOMA
Ir. Mohamad Firdaus Bin Yon	Post: Head (Grid Solution Expertise) Company: TNB	01.04.2021 - 31.03.2023	MEKG
Ir. Azharuddin Bin Md Kassim	Post: CEO/Principal Engineer Company: Prestigious Discovery Sdn. Bhd.	01.08.2021 - 31.07.2023	MEKG
Mr. Poon Kean Yuen	Post: Pengarah Projek Company: Atlantic Blue Sdn. Bhd.	01.08.2021 - 31.07.2023	MEKG
Mr. Muslim Bin Abdullah Zaik	Post: Chief Executive Officer Company: Aeronerve Sdn. Bhd.	01.04.2021 - 31.03.2023	MEKH

DIPLOMA IN ELECTRICAL ENGINEERING (DEK)

This program is intended to produce semi-professional graduates who possess strong engineering knowledge based on skills as assistant engineers. Apart from that, this program is a pathway for students with SPM qualification to further their studies to a higher level in their respective fields, especially the Electrical and Mechatronics Engineering Bachelor's Programme in UTeM.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO) - DIPLOMA PROGRAMME

Programme Educational Objective (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after a few years of graduation. Below are the PEO for the Faculty of Electrical Engineering's Diploma Programme.

NO	PROGRAMME EDUCATIONAL OBJECTIVES (PEO)
	The objectives of this program is to produce graduates that, after three to five years of completing studies,
1.	Graduates will be Assistant Engineers who are knowledgeable and technically competent in related engineering/engineering technology field, as demonstrated through career progression.
2.	Graduates will be Assistant Engineers who are able to communicate professionally with society at large and being ethical and responsible in performing leadership role in an organisation.
3.	Graduates will be Assistant Engineers who have vision in developing their self and career through lifelong learning or involve in techno-preneurs sector.

PROGRAMME OUTCOMES (PO) - DIPLOMA PROGRAMME

Programme Outcome (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the knowledge profile (DK1-DK7) that students acquire throughout the programme.

Below is the list of Programme Outcomes for Faculty of Electrical Engineering's Diploma Programme:

NO	PROGRAMME EDUCATIONAL OBJECTIVES (PEO)
	Upon graduation, graduates should be able to :-
1.	Knowledge: Apply knowledge of applied mathematics, applied science, engineering fundamentals and an engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices.
2.	Problem analysis: Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to their field of activity (DK1 to DK4).
3.	Design/development of solutions: Design solutions for welldefined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations (DK5).
4.	Investigation: Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurements.
5.	Modern Tool Usage: Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations (DK6).
6.	The Engineer and Society: Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems (DK7).
7.	Environment and Sustainability: Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts (DK7).
8.	Ethics: Understand and commit to professional ethics and responsibilities and norms of technician practice.
9.	Individual and Team Work: Function effectively as an individual, and as a member in diverse technical teams.
10.	Communications: Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
11.	Project Management and Finance: Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
12.	Life Long Learning: Recognise the need for, and have the ability to engage in independent updating in the context of specialised technical knowledge.

COURSE IMPLEMENTATION - DEK

The number of credits required to be awarded a Diploma is 90 credits.

This course will take two (2) years and eight (8) months minimum which emphasis on the latest technology and up to date skills. The composition of the credits is as follows:

COMPONENTS		CREDIT HOURS	PERCENTAGE
Compulsory University Course (W)		14	15.56%
Core Course (P)	Engineering	58	77.78%
	Science & Mathematics	12	
Elective (E)		6	6.66%
Total		**90**	**100%**

This course is based on practical and application oriented where the student will be involved in laboratory experiments, computer aided learning, working on practical assignments in electrical engineering workshop. UTeM is the first to conduct this type of Diploma.

CURRICULUM STRUCTURE - DEK

Students are required to keep record of their obtained grades for a given course as shown in Appendix A (Student Audit Form - DEK) for graduation purpose.

COURSE DETAILS FOR DIPLOMA PROGRAMME (DEK)

DEKA 1212
ALGEBRA

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the graph of functions and perform the operation on polynomial using appropriate methods.
2. Solve the linear system and its engineering application using properties of matrix.
3. Evaluate the trigonometric functions and its engineering application using trigonometric properties.

Synopsis

This subject serves as a fundamental mathematics course for engineering students. This subject discusses about the functions and graphs including the unit step function, polynomials including partial fractions and numerical interpolation, matrices and systems of linear equations using analytical and numerical techniques, trigonometry and complex numbers. Through this subject, the students are exposed to various techniques in solving mathematical problems and its application in engineering fields.

DEKE 1123
DIGITAL ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the concept of digital electronics system such as basic numbering system, combinational logic circuit and types of gate.
2. Solve problems based on provided information by using basic gates, MSI, flip-flop and latch.
3. Develop and construct a solution using digital logic circuit.
4. Demonstrate the ability to use appropriate engineering tool in the application of digital logic circuit.
5. Comply with the given project timeline planning.
6. Search, manage and synthesis related information in order to support the proposed solution.

Synopsis

This course will equip students with basic principle, techniques and conventions used in digital electronic circuit design. It will covers topics such as numbering systems and codes, types of basic logic gates, formulation of logic equations and logic circuits schematics, manipulations of logic expression using boolean algebra and DeMorgan' theorem, combinational logic circuits design using SOP, POS and K-Map, basic concept of integrated circuit logic families, MSI logic circuits applications and schematic circuits, and implementations counters and registers using latches and flip flops.

DEKA 1113
PHYSICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain basic concept in physics, covering aspect such as mechanics, fluid mechanics and electric.
2. Use concepts systematically to solve problems in mechanics, fluid mechanics and electric.
3. Demonstrate the ability of communication skills through project presentation.

Synopsis
This course covers three major fields which are mechanics, fluid mechanics and electric. The topics covers in this course are: Forces, Acceleration and Newton's Second Law of Motion, Motion with a Changing Velocity, Circular Motion, Conservation of Energy, Linear Momentum, Fluids, Electric Forces and Fields, Electric Potential, Electric Current and Circuits, Magnetic Forces and Fields, Electromagnetic Induction. Experiments covered Mechanics and Electricity.

DEKC 1113
INSTRUMENTATION & MEASUREMENT

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Understand of electrical measurement and instrumentation principles.
2. Analyze various methods/techniques involve in measurement and instrumentation of electrical engineering.
3. Demonstrate related experiment on measurement and instrumentation of electrical engineering.
4. Work effectively in group to complete the given tasks based on electrical engineering problem.

Synopsis
This subject discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement. It covers most on the measurement devices such as galvanometers, ammeters, voltmeters, AC/DC meters, sensors, transducers, signal conditioning as well as bridges. It also introduces the principle of data acquisation system used in instrumentation.

DEKE 1113
PRINCIPLE OF ELECTRICAL AND ELECTRONICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Analyze electrical circuits using appropriate rules and basic laws.
2. Analyze electronics circuits using appropriate rules and laws.
3. Measure electrical and electronics circuit parameters using appropriate tools.

Synopsis
This course will expose students to the fundamental knowledge in electrical and electronics engineering. It covers topics related to basic laws and introduction to electronics devices that usually used in electrical and electronic circuits. It starts with an introduction to basic element in electrical and electronics such as voltage, current and circuit elements. Then the student will be introduced to basic laws in circuit analysis such as Ohm's law, voltage, and current divider and Kirchoff's law. After that, the electronics devices will be introduced to the student including an introduction to semiconductors, diode, BJT, FET, and its analysis and applications.

DEKP 1111
BASIC ELECTRICAL SKILLS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the knowledge of basic electronic measurement, basic microcontroller programming, and electronic soldering processes.
2. Demonstrate appropriate instruments/ tools handling skills required to solve engineering problems adequetly.
3. Comply with rules, procedure and ethics skills through experiment project.
4. Cooperate effectively as a teamwork during laboratory activities.
   Search, manage and synthesis related information in order to further apprehend their laboratory activities.

Synopsis
In this workshop, students will be exposed to three basic engineering work; Basic Electronic Measurement, Basic microcontroller programming, and Basic introduction to electronic components and soldering process. For the first session, student will be introduced to use several measurement equipment such as voltmeter, ammeter, multimeter, oscilloscope, etc for a given circuit, students need to measure the current and voltage at certain load. After that, student will be exposed to the basic microcontroller programming which is able to control the circuitry design in real time hardware assembling process (arduino circuitry) is carried out and will be assess with a mini project at the end of the session.

DEKP 1213
ELECTRICAL CIRCUIT I

Learning Outcome
Upon completion of this course, the student should be able to:
1. Introduction to basic law in electric circuit and apply method of analysis.
2. Apply and solve circuit theorems in analyzing electrical circuits.
3. Analyze circuits using appropriate simulation and hardware tools.

Synopsis
This subject starts with refresh the student on basics circuit law's using Ohm's law and Kitchhoff's Law. which will cover the active and passive elements, resistive circuit. Student also learn the analytical methods namely mesh and nodal analysis, as well as apply Thevenin's and Norton's Theorems, Superposition Theorem and maximum power transfer in circuit analysis. Power in electrical circuit and maximum power transfers. Basic concepts to two port network and also introduction to PSpice for circuit's analysis. The application of the method will be focusing only on dc circuit analysis.

4. T.L. Floyd, Principles of Electric Circuits, 9th Ed 2013, Pearson Education, Inc.

DEKA 1222
CALCULUS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify limits and continuity of functions using computational methods of limits.
2. Solve derivatives of algebraic, trigonometric, logarithmic and exponential functions using differentiation techniques.
3. Solve integrals of algebraic, trigonometric, logarithmic and exponential functions using integration techniques.
4. Apply the knowledge of calculus to deal with the engineering problems.

Synopsis
This subject enchances two main parts in Calculus which consists of differential and integral which will be solved using analytical and numerical techniques. This subject serves to give students good understanding knowledge the basic concept of derivative and integration in solving application related to mathematics and engineering problems.

DEKE 1213
ANALOGUE ELECTRONICS

Learning Outcomes
Upon completion this course, the students should be able to:
1. Define the characteristics and operation of the BJT, Power Amplifier and Operational Amplifier.
2. Analyse the characteristics and operation of the Active Filter, Voltage Regulator, and Feedback and Oscillator.
3. Conduct and demonstrates practical experiments of BJT, Power Amplifier, Operational Amplifier, Active Filter, Voltage Regulator, and Feedback and Oscillator.
4. Work effectively in group to complete the given tasks based on electrical engineering problem.

Synopsis
This subject serves as an electronic fundamental course for engineering students. The topics that will be covered including the BJT, Power Amplifier, Operational Amplifier, Active Filter, Voltage Regulator, and Feedback and Oscillator. Introduction to the use of P-Spice and Proteus simulation software for circuit designing as well as hardware experiments during laboratory will be implemented.

DEKP 1211
ELECTRICAL WORKSHOP

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Demonstrate appropriate troubleshoot skills on relay control circuit and domestic wiring installation.
2. Ability to apply and use engineering drawing software tools for design electrical system.
3. Demonstrate the ability to awernes the safety, regulation and responsibility through practical competence on the relay control circuit and domestic wiring installation.
4. Demonstrate the ability to work in a team for the practical competence on circuitry design.
5. Demonstrate the ability to work in a team for the practical competence on circuitry design.

Synopsis
This workshop will expose student to relay control circuit, and domestic wiring installation. Concentration is given on the safety aspects and quality of works. Then the students also will be exposed the basic engineering software AutoCAD where to the 2D basic engineering drawing in which involve creating, editing, plotting and electrical services system.

DEKC 1313
MICROPROCESSOR

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Able to describe microprocessor (Motorola 68000) architecture, its operation and the interfacing circuitry of microprocessor-based systems.
2. Develop and construct a microprocessor based system including writing instruction set in assembly language.
3. Demonstrate the ability to work in a team for the microprocessor based project.
4. Present in oral and written regarding output of microcontroller-based system project.
5. Demonstrate the basic skills of project management in managing the microprocessor based project.
6. Demonstrate the element of self learning in the microprocessor based project.

Synopsis
This course is about introduction to microprocessor architecture, instruction set, addressing mode, assembly language programming and interrupt. The course covers the concept of interfacing technique with memory device and peripheral, parallel and serial interfacing, interfacing with ADC/DAC, data sampling technique, system simulation and emulation based on actual microprocessor.

DEKA 1312
SAFETY AND HEALTH FOR ENGINEERS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Demonstrate an understanding of knowledge with the types of hazard and workplace injury prevention, risk management, planning, organization, training and incident investigations.
2. Identify the Occupational Safety and Health knowledge, practices and responsibilities.
3. Collect and sort the relevant to the given talk of safety standards and regulations that must be maintained in compliance with regulatory requirements and within engineering limits.
4. Discuss current engineering safety and health issues and practices that impacting engineering professionals
5. Recognize the important of safety and health that need to be engage during professional work.

Synopsis
The main purpose of this course is to instill the recognition of the need for and the ability to engage in life-long learning among students. Students will be exposed to topics such as Occupational Safety and Health, industrial safety, quality management concept and various quality tools and knowledge of contemporary safety and health issues in related to engineering fields. Presentation case study by the student with a given topic of safety and health will also be included.

DEKC 2123
AUTOMATION

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain and apply the concept of Automation, Programmable Logic Controller (PLC) and their components.
2. Analyze and solve well-defined problems based on provided information by using PLC, Pneumatic, Hydraulic and other automation components.
3. Construct and demonstrate automation system based on design requirement, symbols and schematic diagram.
4. Demonstrate an understanding and able to evaluate the sustainability and impact of the automation system design.
5. Demonstrate the ability to work in a team for the practical competence on PLC, Pneumatic and Hydraulic circuitry design.

Synopsis
This course will introduce a fundamental of the automation in manufacturing sector, their components such as actuators, sensors as well linear and rotary transportation devices. It will also cover on programmable logic controller (PLC) as the main controller including its definition, main hard components, PLC programming languages, interfacing PLC with computers. At the end of this course, students will able to solve automation problems and capable to integrate PLC hardware and software with their components.

DEKC 2113
CONTROL SYSTEM ENGINEERING

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe fundamental knowledge of control system and the transient response of a linear time invariant system.
2. Develop a mathematical model for a linear time invariant system.
3. Analyze a linear time invariant system in time and frequency domain.
4. Search, manage and synthesize information to solve control problems in frequency domain using root locus and/or bode plot techniques.
5. Demonstrate experiments of control systems as well as to analyze and interpret data.

Synopsis
This subject will discuss about the concepts in control system; open and closed loop system; transfer function; signal flow graphs; feedback control system; modeling for electrical system, mechanical system; analysis in time and frequency domain responses and also stability in time and frequency domain.

DEKE 2123
POWER ELECTRONICS

Learning Outcomes

Upon completion this course, the students should be able to:
1. Explain the semiconductor power switches and analyze the performance of rectifiers, choppers and inverters in power converter application.
2. Demonstrate the ability of performing experimental works involving power electronics converters and devices.
3. Demonstrate the ability of communication skills through project presentation.

Synopsis

This course is about the basic principles of power electronics, semiconductor power switches single and three- phase inverter, the application of semiconductor devices in power electronics converters such as AC to DC, AC to AC, DC to DC and DC to AC converters, circuits as DC drives, AC drives and snubbers.

DEKA 2333
DIFFERENTIAL EQUATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:
1. Describe the fundamental concepts of the first and second order differential equations, Laplace transform and Fourier Series.
2. Solve differential equation using an appropriate technique.
3. Apply the knowledge of differential equation to deal with the engineering problems.

Synopsis

This subject consists of 5 chapters: First order linear differential equations, Second order linear differential equations with constants coefficients, Laplace transform, Fourier series and Partial Differential Equations. The syllabuses are developed based on these three different stages which are exposing the learner's on the fundamental concept of differential equation, various techniques to solve different equation and lastly, apply the various solving techniques to the learner's engineering problem.

DEKP 2113
ELECTRICAL CIRCUIT II

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the basic principles of AC single phase system and apply Mesh, Nodal, Thevenin, Norton and Two Port Network theorems to solve related problem.
2. Apply transient analysis on first order and second order electric circuits and conduct steady state analysis to solve AC circuit.
3. Demonstrate the ability to use appropriate engineering tool to analyse transient response and steady state parameters of AC circuit.
4. Search, manage and synthesize information related to AC electrical system.

Synopsis
This subject covers the transient analysis for first order and second order electric circuits. Then, the students will be exposed to the principle of AC voltage and current generations, RMS, average value and RLC circuits analysis. Furthermore, the basic concept and principles to conduct Nodal and Mesh analysis, Thevenin's, Norton's and Superposition Theorems on single phase AC system will be covered in this course.

DEKE 2113
ELECTRICAL MACHINES

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain various types, physical construction and equivalent circuit diagrams of electrical machines. Analyze electrical machines parameters such as torque, power, efficiency and speed.
2. Demonstrate and examine the performance of electrical machines and motor starters installation during laboratory session.
3. Discover on energy efficient machine and motor starters methods for environment and sustainability applications.

Synopsis
Introduction to DC and AC type of electrical machines which cover physical construction, equivalent electrical circuit diagrams and motor starters methods as well. The machine performances like torque, speed and efficiency are investigated. The energy efficiency of machine according to the standard will also be covered.

DEKA 2342
ENGINEERING MATHEMATICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Recognise the multivariable function and extend the principle ideas of calculus in such function.
2. Solve the mathematical problems that involve vector calculus.
3. Apply the knowledge of engineering mathematics to deal with engineering problems.

Synopsis
This subject consists of three chapters: Multivariable Functions, Double Integral and Vector-valued Functions. The syllabus is extended from subject Calculus which emphasizing the concepts of the functions with several variables, double integrals of functions in Cartesian and polar coordinates system and also vector-valued function.

References

DEKP 2213
POWER SYSTEM

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify the principle of basic components and its representation in single and three phase electrical power systems.
2. Explain the fundamental knowledges of per- unit method, the operating principles of the power transformers and transmission lines.
3. Analyze the fundamental knowledges of power flows and symmetrical faults analysis for electrical power system.
4. Utilize appropriate engineering tools for analysing electrical power system.
5. Search and manage to explain information related to power system issues.

Synopsis
The aim of this course is to introduce the basis of electrical power engineering in relation to energy generation, transmission and distribution system. Then, basic principle and application of per unit method for generating the impedance diagram from simple electrical network will be introduced. The student also will be exposed to the fundamental and operating principles of power transformer and transmission line. Furthermore, basic principle of Gauss Seidel and Newton-Raphson methods for power flow analysis will be discussed. Finally, the course will cover the symmetrical fault level and short circuit current calculations for simple electrical network using per-unit method.

DEKP 2214
DIPLOMA PROJECT

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply engineering design to solve electrical engineering problem.

2. Conduct investigation using equipment tool and methods.
3. Demonstrate responsibilities awareness for safety and health.
4. Identify and analyze electrical engineering problem.
5. Apply ethical principles in project implementation.
6. Present the results in written and in oral format effectively.
7. Identify basic entrepreneurship skills in project management.
8. Engage in independent and lifelong learning.

Synopsis

This subject gives students an opportunity to practice the knowledge that they have learnt. At the end of semester, students are required to present their project achievement in oral presentation and submit a comprehensive project report. Student's performance will be evaluated base on project achievement and project report.

References

Engineering, science and other scientific/ technical resources i.e. books, journals, articles and patern.

DEKP 2233
BUILDING MAINTENANCE AND MANAGEMENT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze relevant regulation and standard related to building maintenance and management sector.
2. Design the solution of energy management for building maintainace purpose.
3. Use appropriate engineering tools for the practical competence on building maintenance and management.
4. Apply the technical knowledge of energy audit for building energy management.
5. Understand the impact of energy usage in building towards environment and sustainability.
6. Show the ability to update technical knowledge related to building energy management.

Synopsis

This course covers the concept of building services and systems for mechanical, electrical, plumbing engineering, building floor plans and building regulations, by laws and code of practice. This includes communication lines, escalators and lifts, fire detection and protection system, water drainage and plumbing. The students are also exposed to energy conservation and energy efficiency for environmental protection. Finally, the students will be introduced to concept of the lightning protection, low voltage (LV) systems, distribution boards and switchgear, heating, ventilation and air conditioning (HVAC), security and alarm systems.

DEKC 2213
INDUSTRIAL ROBOTIC

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify, apply and analysis of basic knowledge of industrial robot system component including motion profile and mechanical aspect.
2. Apply specific robotic programming and simulations for industrial robots used in industrial automation systems.
3. Demonstrate ability to use modern tool in industrial automation system.
4. Demonstrate ability to use robotic technologies in a safety manner.
5. Demonstrate ability to use robotic technologies in a sustainable operation.
6. Demonstrate the life long learning in industrial robot system.

Synopsis
Introduction to robotics, classification of robots, basic components of robot systems, basic concepts of kinematics and dynamics, mechanical structure of robot systems, robot drives and motion control system using stepper motor, servo motor, servo amplifier and pneumatics, sensory devices such as position, force and torque, basic robot programming and industrial robot applications. Experiments will include robot programming in an industrial application setting.

DEKP 2223
RENEWABLE ENERGY AND APPLICATIONS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Analyze the existing government policy on renewable energy and related matters to sustainability.
2. Design a renewable energy system to suit with specific need, criteria and conditions.
3. Apply an approriate technique on the installation and measurement procedure of renewable energy system.
4. Demonstrate knowledge of the impact of utilizing renewable energy towards society, in terms of health, safety and legal.
5. Demonstrate the ability of communication skills through presentation.

Synopsis
The subject intends to expose to the students the most recent development on the sustainable electrical resources. This subject also introduces the students various form of sustainable energy resources and their connection to the electrical network. The students also exposed to different types of photovoltaic materials, characteristics and the design procedure to create a photovoltaic system. In addition, there will be a brief intro to the other sustainable energy applications such as wind turbine, hydro, biomas, etc.

DEKU 3118
INDUSTRIAL TRAINING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply appropriate techniques and technical knowledge which is relevant for student field of study.
2. Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
3. Demonstrate soft skill especially communication skill at all level.
4. Work affectively as an individual, team members and as a leader as well.
5. Acquire new knowledge, life-long learning and aware to new technology.

Synopsis

All Diploma students are required to undergo industrial training as part of their curiculum to complete their two and half (2 1/2) years course after semester 4 of studies for a 16- weeks period of training at respective industrial companies. It is compulsory for all students to undergo the Industrial Training Programme. In general, the aim of industrial training are to give exposure, experience and professional skills to various aspects of engineering discipline, in particular in electrical engineering related industries. The students are also expected to be familiarized with efficient, accountable and ethical conduct as they will be supervised directly under the company's personnel as well as supervisors from the faculty. Apart from that, the assessment will be made by the appointed faculty supervisors & the industry supervisors. A PO survey is also embedded inside the assessment form by the industry supervisors. There will also be a survey by the students prior to completion of their training. After completing the industrial training, students have to submit a formal report following the faculty format. Evaluation will be based on faculty supervisor report, industrial supervisor report and student logbook toward grading whether pass or fail.

SERVICE COURSES
(FKM, FPTT, PPB, FTMK, & CO-CURRICULUM UNIT)

DMCG 1323
INDTRODUCTION TO MECHANICAL SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Define the general terms in basic mechanical system engineering.
2. Explain the general principles of static and mechanics.
3. Analyze the mechanical properties of materials.
4. Describe the basic concepts of thermodynamics.
5. Conduct and demonstrate the basic practical works of mechanical system.

Synopsis

Introduction to basic concepts in static and mechanics as a study of physical sciences, system of units, scalars and vectors, free body diagram, various types of structures, stress, strain, principles of dynamics based on kinetic and kinematics and basic concepts of thermodynamics.

DLLW 1112
FOUNDATION ENGLISH

Learning Outcomes

1. Interpret information from various types of oral texts.
2. Express ideas and thoughts orally in group discussions.
3. Distinguish different types of reading texts of varying length and complexity.
4. Produce an article based on non-linear texts in pairs.
5. Apply appropriate grammar elements in quizzes.

Synopsis

This course is designed to help students to improve their proficiency in the English language and to communicate effectively in both spoken and written forms. Five main aspects: listening, speaking, reading, writing and grammar are taught in an integrated approach to build confidence among the learners to become efficient speakers of English in their tertiary education.

DLLW 2122
ENGLISH FOR EFFECTIVE COMMUNICATION

Learning Outcomes

1. Demonstrate interpersonal skills through speeches and role-play based on a situational context.
2. Explain product descriptions and manual instructions in group.

3. Apply appropriate course-verb agreement, tenses, active and passive voices as well as transitional markers in written examination.

Synopsis

This course is designed to provide students with the necessary communication skills to communicate effectively. The skills covered are speaking, reading and writing. The elements of grammar are taught to complement the topics covered in this course. The documents covered are product descriptions and manual instructions. Students demonstrate interpersonal skills through speeches and role-play. The elements of problem-based learning (PBL) are especially exercised during the oral presentation of the product and manual descriptions as well as role-play.

DLLW 3132
ENGLISH FOR MARKETABILITY

Learning Outcomes

1. Produce a reflective writing, resume, job application letter/ online job application letter and short report.
2. Response appropriately to questions during mock interview session.
3. Analyse possible solutions based on the given problem in a group discussion.
4. Use appropriate types of communication using a variety of sentences based on the workplace contexts.

Synopsis

This course aims to introduce and expose students to the basic tenets of communication specifically the oral and written communication required at the workplace. Students will be provided with the opportunity to produce a reflective writing, resume, job-application letter, e-message and report. They will also be able to participate in an interview, and to discuss and explain information in group discussions. Students will be exposed to situations where they learn to function as individuals and team members by communicating in spoken and written forms using appropriate language in a variety of workplace contexts.

DITG 1113
COMPUTER PROGRAMMING

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the fundamental principle of problem solving, programming techniques and programming structures in program development.
2. Explain problem solutions based on the principles of problem solving, programming technique and programming structures.
3. Produce program codes by applying suitable programming structure and techniques.

Synopsis
This course covers the introductory topics in programming using computer language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

DTMW 1012
FUNDAMENTALS OF ENTERPRENEURSHIP ENCULTURATION

Hasil Pembelajaran
Di akhir kursus ini pelajar akan dapat:
1. Menerap budaya keusahawanan berdasarkan teori keusahawanan, revolusi usahawan, sejarah pembangunan usahawan dan perkembangan keusahawanan di Malaysia.
2. Memperakui dan mengaplikasikan kemahiran keusahawanan seperti kreativiti, inovasi, pro-aktif, mengambil risiko, mengenalpasti peluang, pemasaran dan rangkaian untuk memasuki/ menembusi pasaran.
3. Melaksanakan penganjuran seminar keusahawanan dan kerja lapangan perniagaan di samping membuat pembentangan projek perniagaan serta berkongsi pengalaman berkaitan pelaksanaan projek perniagaan kumpulan masing-masing.

Sinopsis
Kursus ini akan membekalkan pelajar dengan motivasi dan kemahiran utama keusahawanan. Di samping itu, pelajar juga akan mendapat kemahiran tentang prinsip-prinsip dan amalan yang diperlukan untuk memulakan, mengembangkan dan memperkukuhkan sesebuah perniagaan. Aktiviti pengajaran, pembelajaran dan aplikasi yang menerapkan teori dan amalan akan membantu pelajar menguasai kompetensi yang perlu sebelum menceburkan diri dalam bidang perniagaan. Kursus ini juga membantu pelajar membentuk jaringan/rangkaian perniagaan melalui perbincangan perniagaan, simulasi dan seminar. Pelajar akan didedahkan dengan isu-isu yang berkaitan dengan pemasaran, pengurusan strategi dan risiko. Di samping itu, pelajar akan dibekalkan dengan kemahiran yang perlu untuk menyediakan penyata aliran tunai dan asas dalam membangunkan/ menyediakan perancangan perniagaan.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO) - BACHELOR PROGRAMME

Programme Educational Objective (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 3 to 5 years of graduation. Three main concepts for PEO for the Faculty of Electrical Engineering's Bachelor Programme consist of Apply engineering knowledge and contribution to respected field, the achievement in technical career as well as lifelong learning.

NO	BACHELOR OF ELECTRICAL ENGINEERING WITH HONOURS (BEKG)
	The objectives of this programme are to produce graduates who:
1.	Practise electrical engineering knowledge creatively and innovatively in broad application.
2.	Attain a successful career, acquire leadership quality, able to work independently, act professionally and practise ethical conduct.
3.	Engage with life-long learning and adapt to constantly evolving technology and entrepreneurial skills in decision making.

NO	BACHELOR OF MECHATRONICS ENGINEERING WITH HONOURS (BEKM)
	The objectives of this programme are to produce graduates who:
1.	Practise mechatronics engineering knowledge creatively and innovatively in broad applications.
2.	Attain a successful career, possess leadership qualities, able to work independently, act professionally and practise ethical conduct.
3.	Engage with life-long learning and adapt to constantly evolving technology and entrepreneurial skills in decision making.

PROGRAMME OUTCOMES (PO) - BACHELOR PROGRAMME

Programme Outcome (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of Programme Outcomes for Faculty of Electrical Engineering's Bachelor Programme:

NO	PROGRAMME OUTCOMES (PO)
1.	**Engineering Knowledge** - Apply knowledge of mathematics, natural science, engineering fundamentals and an engineering specialisation as specified in WK1 to WK4 respectively to the solution of complex engineering problems.
2.	**Problem Analysis** - Identify, formulate, conduct research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences (WK1 to WK4).
3.	**Design/Development of Solutions** - Design solutions for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations (WK5).
4.	**Investigation** - Conduct investigation of complex engineering problems using research-based knowledge (WK8) and research methods, including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions.
5.	**Modern Tool Usage** - Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, with an understanding of the limitations (WK6).
6.	**The Engineer and Society** - Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice and solutions to complex engineering problems (WK7).
7.	**Environment and Sustainability** - Understand and evaluate the sustainability and impact of professional engineering work in the solutions of complex engineering problems in societal and environmental contexts (WK7).

8.	**Ethics** - Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice (WK7).
9.	**Communication** - Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
10.	**Individual and Team Work** - Function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings.
11.	**Life Long Learning** - Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
12.	**Project Management and Finance** - Demonstrate knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, to manage projects in multidisciplinary environments.

BACHELOR OF ELECTRICAL ENGINEERING WITH HONOURS (BEKG)

The Bachelor of Electrical Engineering with Honours (BEKG) programme is designed to produce electrical engineers who are able to work in various electrical engineering disciplines. Graduates are developed through a balanced mix of core and elective engineering courses with a combination of theoretical, practical and soft skill elements so that they become holistic engineers.

PROGRAMME IMPLEMENTATION - BEKG

This programme would take four (4) years minimum and consist of at least 135 credit hours. The programme will emphasis on Electrical Engineering with the composition of the credits are as follows:

COMPONENTS		CREDIT HOURS	PERCENTAGE
Compulsory University Course (W)		12	8.90%
Co-Curriculum (W)		2	1.48%
Core Course (P)	Programme	96	71.11%
	Engineering Seminar	1	0.74%
	Industrial Training	5	3.70%
	Final Year Project	6	4.44%
Elective E	University	4	2.96%
	Programme	9	6.67%
Total		**135**	**100%**

This programme emphasizes on theoretical and tutorials, computer-aided learning, and problem based learning (PBL). It also encourages active and cooperative learning activities other than carrying out assignments, job workshops, industrial training and final year project.

CURRICULUM STRUCTURE - BEKG

Students are required to keep record of their obtained grades for a given course as shown in Appendix B (Student Audit Form - BEKG) for graduation purpose.

COURSE DETAILS FOR BACHELOR PROGRAMME (BEKG)

BEKB 1131
ENGINEERING PRACTICE I

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Construct and demonstrate the operation of a basic electric circuits using basic electrical components.
2. Perform measurement and troubleshooting of electrical circuit operation using digital oscilloscope.
3. Construct, operate and troubleshoot a typical domestic lighting and ventilation (fan) system based on Malaysian standard installation practice.
4. Demonstrate comprehension of results and observation through a short report.
5. Work in a group during the lab implementation and present the work results.

Synopsis
Electrical Engineering Practice I is designed to provide the student with the knowledge to construct, operate, and troubleshoot simple electrical circuits using basic components, measuring instruments and techniques with proficiency. Some of the components and instruments used are, but not limited to, breadboard, wires, resistors and variable power supply. Students will be exposed to practice the various functions and use of typical electrical engineering tools, such as multimeter and oscilliscope for measurement and troubleshooting of circuit operation and performance. Finally, the students will construct a basic domestic lighting and fan wiring based on the Malaysian standard regulations.

ENGINEERING PRACTICE II
Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify and describe the basic characteristics and operations of diode, BJT and FET.
2. Investigate the basic characteristics and operation of digital components such as basic gates and it's combinational, adder and flip- flops.
3. Apply the basic of design concept of relay control circuit.
4. Apply the basic microcontroller programming language for dynamic mechanism application.
5. Work in a group during implementation of relay and microcontroller programming and present the work results.

Synopsis
This course will let students to practice with simulation software tool to solve simple engineering problem. Students also will be introduced with analog components, digital components, electrical and electronic circuitry, relay control, and microcontroller programming using hardware development board.

BEKB 2331
ELECTRICAL ENGINEERING LABORATORY I

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Evaluate the reliability and continuity of the components in three-phase Direct On-Line and forward reverse motor starter.
2. Measure the electrical characteristics of single-phase RLC circuit using appropriate measurement equipment precisely.
3. Identify and design basic characteristics and operation of digital components such basic comparator and 3-bit synchronous counter clearly.
4. Identify and describe BJT amplifier, oscillator, 555 timer and the series/shunt voltage regulators.
5. Write and present technical report systematically.
6. Demonstrate soft skill such as spirit of teamwork.

Synopsis
There are four different types of modules to be covered in this course. The first module is using the LabVolt trainer where students can perform experiments of single-phase RLC load combinations. The students can accurately calculate electrical quantities such as voltage, current and power using the necessary measuring equipment. Then second module is then known as the Motor starter, and students can perform tests on a three-phase Direct On-Line (D.O.L) motor starter and Direct On-Line (D.O.L) Forward-Reverse motor starter. The objectives is that the student should be able to evaluate the reliability and continuity of the components. The third module is known as digital electronics, where students will design and implement the basic comparator , the code converter, and the design of a 3-bit synchronous counter based on flip-flop. Last module is known as analogue, which students are expected to investigate the parameters used in BJT amplifier, to understand the behaviour of oscillator and 555 timer and to know how the series and shunt voltage regulators operate as part in a power supply.

BEKB 2431
ELECTRICAL ENGINEERING LABORATORY II

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the performance characteristics of different configurations of DC motor.
2. Analyse the performance of synchronous and induction machine.
3. Conduct measurement on single-phase transformer and three-phase system with RLC loads.
4. Analyse the performance of the open-loop and closed-loop system according to specifications.
5. Write and present technical report systematically.
6. Demonstrate soft skill such as spirit of teamwork.

Synopsis

The modules involved in this laboratory are designed to horn students practical skills in using common electrical engineering equipment and tools based on hardware experiment and simulation works. Students are practically exposed to common measurement for single-phase and three-phase system, investigate the characteristics and driving operation of DC, synchronous and induction motors, as well as evaluating the behaviour of open- loop and closed-loop control system. The modules are mapped with courses such as Electrical Systems, Electrical Machines and Control System Engineering taken by students during their 2nd and 3rd year of study.

BEKB 3551
ELECTRICAL ENGINEERING LABORATORY III

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Demonstrate the use of engineering simulation software, equipment and tools in generation, transmission, distribution and power system fault problems.
2. Investigate the method to improve the output voltage performance of three-phase inverter.
3. Investigate and design PID controller to control the positioning of the motor.
4. Demonstrate ability to write technical reports related to the experimental works being conducted.
5. Function effectively in a team.

Synopsis

In this course students will be exposed to two engineering simulation software; PSCAD and MATLAB/Simulink. The PSCAD will be used in the Power System Module while the MATLAB/Simulink will be used in the Power Electronics and Control System modules. For control system module, there are real application integration between MATLAB/ Simulink with stepper motor where the PID controller will be used to ensure the trajectory of the motor stop at the desired angle. The students will also investigate and analyze the harmonics performance of a three phase inverter in hardware. Besides that, students need to do some practical with hardware for power system delivery. Along the laboratory session students will also be evaluated in term of their ability to function well in team.

BEKB 3673
INTEGRATED DESIGN PROJECT

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Design solutions by synthesizing electrical engineering knowledge that will solve complex electrical engineering problem in accordance to relevant standards and with appropriate consideration for public health and safety, cultural, societal, environmental and sustainability factors.
2. Utilize modern engineering and IT tools in facilitating solution to complex electrical engineering problems with an understanding of the limitations.
3. Evaluate the impact of the designed product, components or processes, in terms of safety, environmental and sustainability factors.
4. Demonstrate effective teamwork skills in completing the electrically integrated design project.
5. Apply project management and financial knowledge effectively in completing the electrically integrated design project.

Synopsis
Integrated design project is a capstone project where student have to design project where students have to design an electrical and electronic engineering project including project management, project planning, project feasibility study, design selection, design costing and sizing, analysis and evaluation. The course focuses on the implementation and integration of product/conceptual design development to produce a comprehensive final technical report, including engineering proposals and drawings, specifications and bills of quantities, cost estimates of development projects given to students, working in groups. Apart from basic electrical and electronic design, students are also required to integrate their knowledge of other engineering such as (but not limited to) circuit design and analysis, including component selections, project scheduling techniques and sustainable development considerations into their overall project work. At the end of this course, the students will be able to comprehend the needs and requirements for product design procedures and are able to appreciate the importance of integration and synthesis of various of electrical engineering knowledge.

BEKC 2433
SIGNALS AND SYSTEMS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the basic knowledge of signals and systems for continuous-time and discrete-time signals.
2. Analyze the linear time-invariant (LTI) systems in time- domain and frequency-domain.
3. Analyze the LTI systems using Z-Transform method.

Synopsis

This course will discuss about the introduction to signals and systems; classification of signals and systems; linear time- invariant systems and convolutions; Fourier series and Fourier transform; Fourier analysis for continuous-time and discrete- time signals; and Z-transforms method.

BEKC 2453
COMMUNICATION SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic principles of analogue & digital communication, data and computer network.
2. Analyse the analogue and digital communication techniques that are typically used in communication systems.
3. Explain the concept of computer system network.

Synopsis

Topics covered are: Introduction to Telecommunications, Transmission Modes, Power Measurements, Electromagnetic Frequency Spectrum, Bandwidth and Information Capacity, Amplitude Modulation Transmission & Reception, Single-Sidebands Communications Systems, Angle Modulation Transmission & Reception, FM Stereo, Noise in Telecommunication Systems, Digital Communication, Digital Transmission, PCM, Digital Modulation/ Demodulation, ASK, FSK, PSK, Data Communication & Computer Network. Frequency Division Multiplexing, Time Division Multiplexing, Space Division Multiplexing.

BEKC 3543
MICROPROCESSOR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe and explain microprocessor based system (Motorola 68000) architecture, its operation interfacing circuitry and its supporting components.
2. Write and apply the 68K Microprocessor instruction set operation in assembly language.
3. Describe and distinguish the concept of the Motorola 68000 microprocessor system and design memory and peripheral device interface.
4. Develop and construct a microprocessor based system in solving any related problems.
5. Demonstrate the ability to work in a team for the microprocessor-based system project.
6. Present in oral and prepare the technical report for the microprocessor-based system project.

Synopsis

This course is about hardware and microprocessor handling, type of microprocessor systems, system handler and timing diagrams. The course covers the concept of MC68000 microprocessor software architecture, programming, assembly language and basic instruction, data transferring instruction, program control and subroutine, arithmetic and logic operations. It touches most on programming techniques, designing a microcomputer system, interfaces with memory and I/O devices. Students will experience PBL approach in this course where a PO-PBL will be introduced to the student.

BEKC 3523
CONTROL SYSTEMS ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic features and configuration of control systems and derive the mathematical model of physical system in frequency and time domains.
2. Analyse control system performance and stability of linear control system in time and frequency domains.
3. Employ root locus method and its role in control system design.
4. Analyse the asymptotic approximation Bode plots performances for first order and second order systems.

Synopsis

This course introduces the students to the fundamental ideas and definition of control systems such as block diagrams, plants or processes, open-loop and closed-loop control systems, transfer functions and transient and steady state responses. Students will be taught on how to obtain mathematical models for actual physical systems such as electrical, mechanical, electromechanical and simple fluid flow systems in transfer function and state space equation. Methods of system representation such as block diagram representation and signal flow graphs will be examined. The students will also be exposed to techniques of analysing control systems such as time domain analysis and stability. Besides, the student will be taught on the Root locus method and system performance analyse using Bode diagrams. Finally, an introduction to the design and analysis of control systems using MATLAB will also be given.

BEKC 3663
CONTROL AND INSTRUMENTATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply and analyze the appropriate instrumentation elements for a data acquisition system.
2. Design compensators and controllers for control systems in time and frequency domain.
3. Design a controller and observer for a state variable feedback system.

Synopsis

This course divides the contents into two parts; Control System and Instrumentation. Control system part introduces students to the controller design of Linear Time Invariant (LTI) Systems by using Root Locus, Ziegler Nichols and state variable feedback systems. In state variable feedback systems, students will study the controllability and observability of LTI systems in state-space form and design a state feedback controller with full-state feedback observer by using pole placement approach. Instrumentations part exposes students to the concepts of data acquisition system (such as sensors & transducers, signal conditioning & processing, A/D and D/A conversion, interfacing standards and data presentation).

BEKC 4743
INTELLIGENT CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Utilize the simulation tools for AI applications such as Simulink and MATLAB for appropriate industrial case studies.
2. Design basic fuzzy logic or neural network systems according to the engineering problem.
3. Demonstrate and analyze the performance of fuzzy logic and/or neural network using Simulink/ MATLAB or other specified tools.

Synopsis

Artificial Intelligence (AI) is a field of study concerns on allowing machines to imitate human's thinking or behaviour. By applying AI techniques, machines would be able to solve complex engineering problems such as predicting numbers of defect products in factory, optimizing a water tank system, classifying patients based on symptoms of a disease and etc. In this course students will be focusing on two popular subtopics in Artificial Intelligence area which is Neural Network and Fuzzy Logic. Students will be exposed towards the concept of Neural Network and/or Fuzzy Logic and its implementation methods in controlling engineering system using appropriate tools such as SIMULINK/MATLAB.

BEKC 4683
DIGITAL CONTROL SYSTEMS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Transform continuous-time signals into discrete-time signals and to represent LTI digital control systems in z- domain.
2. Analyze the stability and performance of digital control systems.
3. Design a discrete compensator using root locus technique, analytical technique and frequency response method, as well as to design a discrete state feedback controller and observer using a pole-placement method.

Synopsis
This course consists of discussions about an introduction to digital control systems, the relationship between continuous- time and discrete –time control systems, digital system coding, sampling process, quantization and z-transform, and digital control system representations. The notions of controllability, observability, and stability of digital control systems and analyses in time, frequency, and z domains are also included in this subject. The design of digital PID controllers, lead-lag compensators, and state feedback and observer gain via a pole placement are covered in this subject. The analyses and design of digital control systems are performed using MATLAB and Simulink. Students are encouraged to gain scientific knowledge of contemporary issues related this subject.

BEKE 2333
ANALOGUE ELECTRONICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the knowledge of electrical principle in BJT/FET amplifier, power amplifier, oscillator, active filter and voltage regulator.
2. Analyze the BJT/FET amplifier, power amplifier, oscillator, active filter and voltage regulator.
3. Design the analogue circuit system for signal amplification.
4. Exhibit technical writing to design the analogue circuit system for signal amplification.

Synopsis
This course is about the basic principle of analog electronic circuits mostly performing the concepts of amplification. The course subjects contain the concepts of amplifier, BJT and FET are the devices usually used in amplifiers, small signal amplifier, power amplifiers (class A and class AB), oscillator, active filters and voltage regulators.

BEKE 3533
ELECTRICAL MACHINES

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Understanding on basic principle of electromechanical energy conversion and operation of electrical machines.
2. Analyze dynamic parameters and performances of electrical machines in terms of torque density, power efficiency and speed.
3. Design an electrical machine based on given requirements and constraints.

Synopsis
Introduction to selected type of both DC and AC electrical machines which cover physical construction, equivalent electrical circuit diagrams and working principles. The machine performances like torque, speed and efficiency are investigated. The starting and control techniques are also investigated for a better machine selection of appropriate application.

References
1. Stephen J. Chapman, Electric Machinery Fundamentals, 4th ed., McGraw-Hill, 2012.

BEKE 3543
POWER ELECTRONICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Demonstrate the principle, theory and concept of power electronic devices, rectifiers, dc to dc converters and inverters.
2. Develop and design power rectifiers, dc to dc converters and inverters by incorporating the power electronic devices and components for various engineering applications.

Synopsis
This course will discuss the characteristics of power switching devices so that the suitable devices and components can be selected in designing the power electronic converters. Various topologies of power electronic converters such as rectifiers, dc- dc choppers (non-isolated and isolated), dc-ac inverter (single and three phase) and their principle operation will be discussed. The performance parameters of the power converters, i.e. average and rms values, power, efficiency, total harmonic distortion (THD) and etc. will be analyzed through the mathematical calculation and simulation using PSpice and Matlab. In addition, several switching techniques including pulse width modulation (PWM) and their effect on the converter performance will also be covered.

BEKE 3673
INDUSTRIAL POWER ELECTRONICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Understand and analyze the application of power electronics in renewable energy, power system, industrial appliances and transportation.
2. Explain the operation, function and interaction between the components and the sub-systems used in power electronic applications.
3. Model, analyze and design the power electronic application system.

Synopsis
This course will discuss the principles of power generation, power application, and power quality improvement by means of power electronic devices. The basic operation and design of power supply and gate driver will be reviewed at glance. Subsequently, students will be given fundamental knowledge on how to design common power electronic systems used in industrial applications. The basic operation and designed of switched mode power supply (SMPS), power electronics in solar applications, high voltage direct current (HVDC), flexible AC Transmission Systems (FACTS), electric/ hybrid vehicles and active filter will be exposed to the students.

BEKE 3663
POWER ELECTRONICS SYSTEM

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Analyse converter output performances for various modulation control strategies.
2. Design control algorithm or modulation technique and control circuit for improving converter output performances.
3. Apply and perform project-based learning using modern engineering tools.

Synopsis
This course will discuss on essential parts in power electronic systems, development of control strategies of power electronic systems (e.g. firing control unit and some modulation techniques for controlled rectifiers, choppers and inverters), design of control algorithms/circuits and analyse the converter outputs performances. Students will perform a project-based learning to improve output converter performances using modern engineering tools.

BEKE 4753
ELECTRICAL DRIVES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyse the characteristics and dynamic modeling of electrical machine and drives.
2. Analyze the performance parameters of the electrical drives.
3. Design control strategy to drive the machine for optimum performance.
4. Operate as a team member or leader in a team project.
5. Engage in an independent and life long learning.

Synopsis

This course will discuss the electric drives, switch-mode converters, quadrants operation, current-controlled converters, modeling and transfer function of DC motor, converters of DC drive, closed-loop control of DC drives. It also covers the basic operations and dynamic modeling of Induction Motor, including scalar control, vector control and implementation of motor drive using microprocessor.

BEKE 4763
MODERN ELECTRICAL DRIVES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain power electronics conversion in AC drives.
2. Analyze the dynamic motor of 3 phase AC machine.
3. Design the controller and evaluate the performance of AC drive systems.

Synopsis

This course will discuss the electric drives components, machine reference frame principle, vector transformation, direct vector control of synchronous motor and induction motor drives, dynamic modeling of AC motors, three-phase PWM Voltage Source Inverter fed AC motor drives and direct torque induction motor drives. Closed-loop speed control, current control and voltage control strategies including hysteresis current control, ramp- comparison and space- vector modulation. Students will experience POPBL approach in this course.

BEKE 4873
ELECTRICAL MACHINE DESIGN

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Demonstrate fundamental understanding of the interaction of the electromagnetic and mechanical engineering disciplines related to electrical machine design.
2. Identify of the differences in construction, performance and operation between the main topologies of electrical machines.
3. Select and employ techniques to design an electrical machine and select the appropriate materials for the application at hand.

Synopsis

This module is a continuation of the material covered in electrical machines. The module will cover the machine sizing considering power electronic and mechanical issues, magnetic materials including soft and hard materials and winding design, operating principle and basic design principles of different machine types and topologies including surface and buried permanent magnet radial machines, axial flux and reluctance machines.

BEKG 1123
PRINCIPLES OF ELECTRICAL AND ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic principles of electrical and electronics components, terminologies, configuration, laws and rules.
2. Apply appropriate circuit analysis methods to solve DC (resistive) circuits problems.
3. Analyze circuits containing semiconductor devices.

Synopsis

This course will discuss about the basic principles of electrical and electronics, such as fundamental knowledge on electric element, principles of electricity, units associated with basic electrical quantities, symbol and components. Then the study on how to apply circuit theory to the solution of simple circuits and networks by the application of Ohm's law and Kirchhoff's laws, and the concepts of potential and current dividers in solving DC series and parallel circuit is explained.

Then, the behaviour of semiconductors and the way in which they are employed in diodes will be discussed. The semiconductor theory and devices, the atomic structures, energy band, P-type and N-type and how these materials are employed to form devices such as diode and BJTs are mentioned. Then the application and calculation of diode, DC biasing of Bipolar Junction Transistor (BJT), DC biasing of Field Effect Transistor (FET) and Operational-Amplifier (Op-Amp) circuits are explained.

BEKG 1233
PRINCIPLES OF INSTRUMENTATION AND MEASUREMENT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the principle, various terms and standards in measurement.
2. Explain the principle of measurement devices.
3. Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.
4. Explain the operation, function and applications of the transducers/sensors.

Synopsis

This course discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement. It covers most on the measurement devices such as galvanometers, ammeters, voltmeters, wattmeter, temperature, force and torque and pressure measurement as well as accelerator meter. It also introduces oscilloscope and sensors for instrumentation application.

BEKG 2433
ELECTRICAL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the major components of an electrical power system (generation, transmission, and distribution system).
2. Calculate the AC voltage and current characteristic in AC circuits.
3. Analyze the single and three phase circuits by emphasizing on complex power and power factor correction.
4. Analyze the magnetic, single phase transformer and three phase transformer equivalent circuits.

Synopsis

This course introduces students to topics such as alternating current circuit analysis, phasor representation, RMS value, average power, reactive power, active power, apparent power, power factor and power factor correction for single phase and

balance three phase system. In addition, magnetic circuit, construction and operation of transformer will be discussed in this subject.

BEKG 2443
ENGINEERING MATHEMATICS 2

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of multivariable functions, multiple integrals and vector calculus.
2. Solve the mathematical problems that involve function of several variable, multiple integrals and vector calculus.
3. Apply the knowledge of advanced engineering mathematics to deal with the engineering problems.

Synopsis

This course consists of three chapters: Function of Several Variables: Functions of Two or More Variables, Limit and Continuity, Partial Derivatives, Total Differential, Chain Rule, Implicit Differentiation and Local Extrema. Multiple Integrals: Double Integral, Double Integral Over Non- Rectangular Regions, Double Integral in Polar Coordinates, Triple Integral, Triple Integral in Cylindrical and Spherical Coordinates and Moment and Centre of Gravity. Vector Calculus: Vector fields, Line integral, Green's theorem, Curl and Divergence, Parametric surfaces and their Areas, Surface integrals, Stoke's theorem and Divergence theorem.

BEKM 4863
INDUSTRIAL ROBOTICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the solution of complex kinematics and dynamics problem.
2. Design a robotic manipulator work cell for manufacturing purposes.
3. Explain the working principles of robot manipulator drive, flexible manufacturing system and quality control in industrial robotic network.

Synopsis

This course is an introduction to the basic principle of robotic technology in industry. Robotic systems fundamental which includes forward and reverse kinematics of the basic robotic are introduce. Fundamental mathematics,

scientific and engineering knowledge will be applied in this course to the solution of complex robotic problems. In developing the solution of integration of robotic components, the robotic actuation and drive systems are introduced, i.e. pneumatic and hydraulic systems, mechanical actuation systems, and electrical actuation systems. Student will be exposed to industrial field topics such as production system and integration of industrial robotic in flexible manufacturing system. The quality production will be analyze using six sigma and DMAIC procedure.

BEKP 2453
ELECTROMAGNETIC THEORY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply vector analysis in order to solve problems regarding electromagnetic phenomena.
2. Identify the principles of static electric and magnetic fields as well as formulating and analyzing electrostatics and magnetostatic problems.
3. Investigate static and dynamic electromagnetic fields by utilizing the Maxwell's equation.

Synopsis

This course begins by teaching about vector calculus, an essential mathematical tool for gaining a quantitative understanding of the electromagnetic phenomena. It is then followed by the study of electrostatic fields, covering Coulomb's Law, Gauss's Law, conductors, dielectrics, and electric boundary conditions. Next, magnetostatic fields are covered; its sub-topics include Biot-Savart's Law, Ampere's Law, magnetic forces and torque, and magnetic boundary conditions. After that, the course will examine the situations in which electric and magnetic fields are dynamic (i.e. varies with time) using Maxwell's equations.

BEKC 3673
INDUSTRIAL CONTROL AND AUTOMATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the principles and fundamentals of industrial control systems and automations system.
2. Analyze complex structure of control processes based on pneumatic and hydraulic applications, as well as by using feedback and feedforward control systems.
3. Design automated PLC based systems with consideration for specific needs.

Synopsis

This course will cover sensors, instrumentation and control systems commonly used in the industry. The instrumentation part includes topics such as sensors, signal conditioning and conversion, transducers & actuators, and data acquisition. The industrial control portion covers the evaluation and types of control systems, centralized system, distributed control systems (DCS), fieldbuses, PID controllers and their operations. It will include other common control systems such as feedforward, cascade, ratio, time- delay compensation, sequence control. Besides, it will cover appropriate controllers for process control industries, too.

BEKP 3683
DISTRIBUTION SYSTEM DESIGN

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze and breaking down the information of design parameters into component parts.
2. Create the design of low voltage system by using standard design procedures.
3. Apply the concept and technical specification of low voltage protection system.
4. Apply the Acts, Regulations and Standard related to electrical installation and its safety.

Synopsis

This course presents the principles and design of electrical distribution system. It covers various issues of distribution system which includes regulations and standards related to electrical installation. Characteristics and specifications for circuit breakers, cable size selection, and method of earthing and earthing arrangement are described in detail. The students are also exposed to the use of standard design procedures and the type of testing and troubleshooting required for low voltage systems. The students will also be exposed on the concepts of protection and its devices in low voltage system.

BEKP 4773
POWER SYSTEM ANALYSIS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Develop the Per-Unit system from one line diagram and analyzed the power flow analysis using Gauss Seidel and Newton Raphson method.
2. Investigate the balanced and unbalanced faults in Power System and the stability of synchronous machine.

Synopsis

The Power System Analysis covers transient/ dynamic nature of power systems such as fault analysis, load flow and stability analysis. The analysis on balanced and unbalanced faults in power systems are discussed.

Solutions for unbalanced faults are approached using fundamentals of symmetrical components. The course also covers the fundamental concept of the behavior of synchronous machines after a disturbance, i.e., steady-state and transient

BEKP 4843
RENEWABLE ENERGY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Interpret the government policy in relation to renewable energy development both technically and economically.
2. Analyse the selected forms of distributed generators and their associated connection impacts to the electrical grid
3. Design the grid-connected solar photovoltaic system and evaluate the system performance accordingly

Synopsis

The course intends to expose the students the most recent renewable energy development both technically and economically. This includes context, drivers and the up-to- update government policy. In addition, this course also introduces the students various form of renewable energy resources and their associated impact to the electricity systems. The students will also be exposed to different types of photovoltaic technology. Finally, this course includes the detail design of grid-connected PV systems and the performance evaluation.

BEKP 4853
ENERGY UTILIZATION AND CONSERVATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify and analyze energy consumption for different type of electricity tariff, demand side tariff initiative, penalty in electricity bill and correction strategy for different sector.
2. Design and establish a Sustainable Energy Management System (SEMS) strategy for an organization.
3. Conduct and implement procedural energy auditing and interpret data through measurement & verification practices with economic aspect for energy management project.
4. Apply energy policies, regulation, act, energy efficient, green and renewable technologies toward energy utilization and conservation.

Synopsis

This course introduces energy utilization and conservation through the understanding of its energy policies, regulation and act such as electricity supply act 1990 (act 447) and electricity regulation 1994, energy commission act 2001 (act 610) and efficient management of electrical energy regulation (Emeer) 2008 at distribution level. The syllabus covers the

important of energy efficient equipment, green and renewable technologies towards utilization and conservation. Furthermore, analysis of different electricity tariff categories and energy auditing procedure will be conducted and implemented. Finally, this course will also cover the evaluation of the economic aspect in energy management project through measurement and verification practices.

BEKP 4873
POWER SYSTEM PROTECTION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the basic principles of power system protection.
2. Analyze the use of Current Transformer (CT), Voltage Transformer (VT), fuse and circuit breaker for protection through technical justification.
3. Design the coordination for protection system scheme.
4. Design appropriate protection schemes for electrical equipment such as transformer, generator and motor.

Synopsis

This course introduces the fundamental of power system protection and relaying, protection principle and coordination in power system network. Detail explanation on various type of protection schemes such as overcurrent protection, transformer protection, distance protection and differential protection. In addition, the theory and applications of the main components used in power system protection and device such as protection relay, circuit breaker (CB), CTs, VTs, will be discussed.

BEKP 4883
HIGH VOLTAGE ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify and analyze the conduction and breakdown theory in gas, solid and liquid dielectrics.
2. Explain the fundamental knowledge of generation and measurement of high voltage AC, DC and impulse.
3. Examine the high voltage testing, insulation coordination and diagnostics on materials and electrical apparatus.
4. Analyze the overvoltage phenomenon in electric power system.

Synopsis

This course is intended to give students deep knowledge about high voltage engineering it focusses on the characteristics of conduction and breakdown in gas, solid and liquid dielectrics. Generation of high voltages AC, DC and impulses, their measurements and testing techniques on materials and electrical apparatus according to standard are also covered. Students are also exposed to overvoltage phenomenon in electric power systems.

BEKU 1123
ELECTRICAL CIRCUIT I

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyse electrical circuit using Ohm's Law and Kirchhoff's Laws.
2. Apply Mesh and Nodal methods for DC and AC circuit analysis.
3. Analyze DC an AC circuits using Superposition, Thevenin, Norton and Maximum Power Transfer Theorems.

Synopsis

This course introduces the students to Ohm's Laws, Kirchhoff's Laws and use them to calculate current, voltage and power in electrical circuitries. Students also learn the analytical methods namely mesh and nodal analysis, as well as apply Thevenin theorem, Norton theorem, Superposition, and the Maximum Power Transfer in circuit analysis. The applications of the above tools will cover both dc and ac circuits.

3. Nilsson and Riedel, Electric Circuits, Prentice Hall, Electric Circuits (9th Edition), 2010.

BEKU 2333
ELECTRICAL CIRCUIT II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze first order and second order circuit for transient and steady state response.
2. Apply Laplace transforms method to analyze circuit response in frequency domain.
3. Analyze the frequency response of RLC circuits and the characteristics of RLC filters.
4. Analyze various topology of two-port network in electrical circuit analysis.

Synopsis

This course exposes student to the application of several techniques in analyzing electrical circuits, such as the Laplace transform and two ports network. The students are required to use appropriate tools to analyze transient and frequency response in electrical circuit.

BEKU 3695
INDUSTRIAL TRAINING

Learning Outcomes
Upon completion of this course, the students should be able to:
1. Apply appropriate techniques and technical knowledge which is relevant for student field of study.
2. Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
3. Demonstrate soft skill especially communication skill at all level.
4. Work affectively as an individual, team members and as a leader as well.
5. Acquire new knowledge, life-long learning and aware to new technology.

Synopsis
All bachelor degree students are required to undergo industrial training as part of their curriculum to complete their four (4) years course for the Bachelor of Electrical Engineering (BEKG) and Bachelor of Mechatronics Engineering (BEKM). It is compulsory for all degree program students to undergo the Industrial Training Programme.In general, the aim of industrial training are to give exposure, experience and professional skills to various aspects of engineering discipline, in particular in electrical engineering related industries. The students are also expected to be familiarized with efficient, accountable and ethical conduct as they will be supervised directly under the company's personnel as well as supervisors from the faculty. Apart from that, the assessment will be made by the appointed faculty supervisors & the industry supervisors.

BEKU 4792
FINAL YEAR PROJECT 1

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Conduct proper literature survey and identify the problems, objectives and scope of project clearly.
2. Select, plan and execute a proper methodology in problem solving.
3. Present the project proposal in written and in oral format effectively.
4. Work systematically and commit to professional ethics.

Synopsis
This course is the first part of the Final Year Project which requires two semesters to complete. For the first semester as of this subject, student(s) and supervisor(s) are expected to have two-way communications which later comes to an agreement of project topic leading to project supervision and project learning process collectively. At the end of the semester, students are required to deliver first year progress report which generally covers abstract, problem statement, objectives, scope of works, literature review, proposed methodology, early results, and general conclusion. Sessions for oral presentation is also held to measure student's level of understanding and capability on carrying specified project.

References
Depend on each student project's references.

BEKU 4861
ENGINEERING SEMINAR

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify the professional engineering knowledge, practices and responsibilities.
2. Collect and sort relevant information with regards to the given technical talk.
3. Discuss current engineering issues and practices that impacting engineering professionals.

Synopsis
The main purpose of this course is to instill the recognition of the need for and the ability to engage in life-long learning among students. Through presentation by invited speakers from the industry and academia, students will be exposed to topics such as professional engineering bodies and knowledge of in contemporary issues in related engineering fields. Presentation by successful alumni describing how their careers developed after obtaining their undergraduate degrees will also be included.

BEKU 4894
FINAL YEAR PROJECT II

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify, formulate, research literature and analyze problem.
2. Conduct investigation using research-based knowledge and methods.
3. Apply ethical principles in project implementation.
4. Present the results in written and in oral format effectively.
5. Identify basic entrepreneurship skills in project management.
6. Apply reasoning informed by contextual knowledge.
7. Engage in independent and lifelong learning.

Synopsis
This course is the second part of Final Year Project I, in second semester. Students will continue their project from FINAL YEAR PROJECT I (BEKU 4792) during the second semester, and they should accomplish the projects completely either in hardware, software or both. Students needs to write-up a good final report (in thesis format), as a part of the course's assessment.

References
Depend on each student project's references.

BENG 1413
DIGITAL ELECTRONICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the number system, basic concept and terminology of digital circuits that form complex electronic systems.
2. Analyze the basic circuits based on combinational and sequential components.

Synopsis
The outcome of this course is to deliver knowledge, understanding and application of the digital electronics. The course begin with the introductory concepts of digital technology, number systems and codes. Then, logic gates and Boolean algebra will be explored. Apart from that, combinational logic circuits and functions of combinational logic will be introduced. Students will also be enlightened with latches and flip-flops. Finally, this course will also introduce integrated circuit technology where students also will be explored to semiconductor technology for the project assignment. This course will also expose the students to current application in the digital electronics industry.

BENG 2143
ENGINEERING STATISTICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the concepts of data description and probability, normal and sampling distributions, estimation and hypothesis testing, ANOVA, regression and non- parametric tests to solve mathematical problems.
2. Analyze engineering data using descriptive statistics.
3. Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression.

Synopsis

The outcome of this course is to deliver statistical techniques and tools for data analysis. The course begins with data description. Then, students will be exposed to normal and sampling distributions, estimation and hypothesis testing for one and two populations. In addition, ANOVA, simple linear regression, multiple linear regression and polynomial regression will be taught in this course. Apart from that, students will learn non-parametric statistics. Finally, students will apply their knowledge using statistical software application which are widely used in the industry.

BENG 4322
ENGINEER AND SOCIETY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply ethical principles and commitment, to professional ethics, responsibilities and norms of engineering practice.
2. Apply reasoning informed by contextual knowledge to assess health, safety and legal issues and its subsequent responsibilities, relevant to professional practice.
3. Understand the needs for sustainable development and the impact of engineering solutions on society and environment.

Synopsis

This course will discuss about:
Ethics and professionalism, engineers and society, professional ethics, code of ethics, ethics dealing with human relations, BEM, IEM, regulations on professional conduct, route to professional status, engineers as an employee or employer, decision making, competence of practicing engineering, accountability, liability, engineer's legal liability specified in contract law, engineers and the environment, sustainability, etc.

SERVICE COURSES (FTMK)

BITG 1233
COMPUTER PROGRAMMING

Learning Outcomes

In the end of the course, student will be able to:
1. Identify the fundamental principles of problem solving, programming techniques and structures in program development.
2. Explain the principles of problem solving and programming techniques to solve given problems.
3. Construct computer program codes by applying suitable programming structures and techniques.

Synopsis

This course covers the introductory topics in programming using C++ language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

SERVICE COURSES (FKM)

BMCG 1013
DIFFERENTIAL EQUATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:
1. Describe the basic concept of first and second order differential equations, Laplace Transform and Fourier series.
2. Select an appropriate technique to solve problems involving differential equations.
3. Apply the concept of differential equations in solving engineering problems.

Synopsis

This course provides an introductory knowledge to differential equations and its applications. The students are introduced to the first order differential equations and solve using analytical methods of separable variable and linear equations and also using numerical methods such as Euler's method and second order Runge-Kutta method. Upon completion, the students are then introduced to the second order linear differential equations with constant coefficients and learn the methods of solving and its applications. The course is extended to the following chapters which include Laplace transform, Fourier series and partial differential equations and solving using numerical methods which is finite difference method (Parabolic, Hyperbolic).

BMCG 1523
ENGINEERING GRAPHICS AND COMPUTER AIDED DESIGN

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the engineering graphics fundamentals.
2. Construct technical drawing using manual sketching and computer aided design.
3. Communicate by using engineering drawings.

Synopsis

The course concentrates on manual drafting and Computer Aided Drafting (CAD) software. For manual drafting, students will be exposed to the basic drafting tools, techniques and the application in producing various types of engineering drawing. For computer aided design, CAD engineering drawing software is exercised to produce engineering drawing. The students will be exposed to CAD interface, editing commands, coordinate system, template preparation and layer to produce various types of engineering drawing.

BMCG 2432
INTRODUCTION TO MECHANICAL ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe basic concepts and fundamental principles of mechanical engineering mechanics.
2. Apply basic concepts and fundamental principles to solve mechanical engineering problems.
3. Analyze basic problems in mechanical engineering.

Synopsis

This course consists of basic principles of:
Static: General principle, Force vector and Equilibrium of Particle.
Dynamics: Apply Newton's 2nd Law in Kinematics and Kinetics of Particle.
Mechanics: Principle of Stress & Strain and Torsion.
Thermodynamics: Property table of pure substance, Closed and open system with respect to first law of thermodynamics and refrigeration cycles.

BMFG 1313
ENGINEERING MATHEMATICS 1

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the fundamental concepts of matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector- valued functions.
2. Solve the mathematical problems that involve matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector-valued functions by using an appropriate technique.
3. Apply the knowledge of engineering mathematics to deal with the engineering problems.

Synopsis
This course consists of three chapters: Functions of Several Variables, Multiple Integrals and Vector-valued Functions. The syllabus is developed by introducing the concepts of the functions with severable variables, integration and also vector- valued function, followed by learning various techniques in solving the problems and its application in physical and engineering fields.

BMFG 1213
ENGINEERING MATERIALS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain the basic concepts of engineering materials in terms of interatomic bonding and crystal structure.
2. Analyze the properties of engineering materials based on its structure.
3. Describe the processing methods for engineering materials.

Synopsis
This course introduces basic concepts of engineering materials that covers introduction to engineering materials, interatomic bonding, crystalline structure and imperfections and diffusion in solid. Introduction to the binary phase diagrams are also provided. Explanation on different types of engineering material (i.e. metal, ceramic, polymer, composites and functional), its mechanical properties, basic processing and applications are also included.

BMFG 3213
ENGINEERING ECONOMY AND MANAGEMENT

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain the principles and terminology of engineering economy, concepts of time value of money, and risk planning.
2. Apply the concepts, principle and techniques in project management and engineering economy.
3. Analyze complex problems and scenario using engineering economy factors (F/P, P/F, P/A, A/P, F/A, A/F, P/G, A/G factors).
4. Evaluate and select between alternatives using suitable methods such as Present Worth, Future Worth, Annual Worth Analysis; Rate of Return and Breakeven & Payback Analysis.
5. Evaluate the project risk in engineering project.

Synopsis
The course covers engineering economy and managing project & risk. Engineering economy discusses about the time value of money and interest relationship; engineering economy factors; nominal and effective interest rates; worth analysis; breakeven and payback analysis; which are useful to define certain project criteria that are utilized by engineers and project managers to select the best economic choice among several alternative. Management of risk incorporates the concepts of probability and statistics in the evaluation of alternatives. This allows management to determine the probability of success of failure of the project.

SERVICE COURSES
(FPTT, PPB, IPTK & CO-CURRICULUM UNIT)

BTMW 4012
TECHNOLOGY ENTERPRENEURSHIP

Learning Outcomes
In the end of the course, student will be able to:
1. Recognize the importance of entrepreneurship, the role of entrepreneurship in today's society, and the technical knowledge of the entrepreneurial process.
2. Explain the basic concepts of interdisciplinary competences in management and create technology- based businesses.
3. Present a business plan project and develop an entrepreneurial profile.

Synopsis
The course provides students with technological knowledge about entrepreneurship as well as the skills to turn such knowledge into practice. The teaching and learning (T&L) activities include case study and field work with the aim to inculcate entrepreneurship values and entrepreneurship acculturation with a view to successfully launch and subsequently manage their enterprises. Students will be exposed with the support systems available or government agencies in starting new ventures, including the tactics commonly employed by entrepreneurs starting a business. The course allows students to critically evaluate business in terms of technical feasibility, investment potential, and risks.

BLHC 4032
CRITICAL AND CREATIVE THINKING

Learning Outcomes
In the end of the course, student will be able to:
1. Identify the basic principles of critical and creative thinking skills to solve everyday problems.
2. Provide feedback on issues related to the development of critical and creative thinking skills.
3. Solve problems of case studies on current issues related to their field of study.
4. Analyze future market requirements and propose a solution-based products.

Synopsis
This course is designed to expose students to the principle foundation in critical and creative thinking. Students will apply the methods of critical thinking and creative problem- solving through a student-centered approach including approaches of problems based learning (PBL). Students will be guided in the final project where the analysis of future market requirements will be implemented and proposed solutions are based on the product market requirements from multiple perspectives and thinking outside the box.

BLLW 1172
COMMUNICATIVE MALAY LANGUAGE I

Hasil Pembelajaran
Pada akhir kursus ini, pelajar akan dapat:
1. Memberikan respon terhadap perbualan biasa dan situasi-situasi lain.
2. Mengaitkan bunyi-bunyi atau ucapan dalam Bahasa Melayu dari segi nahu, fonologi dan kemahiran lisan tentang diri sendiri, keluarga, rakan-rakan and aktiviti harian.
3. Membincangkan secara mudah tentang sesuatu topik semasa.
4. Membina ayat dan bertutur dalam bahasa Melayu dengan gramatis.

Sinopsis
Kursus ini memperkenalkan susuk tatabahasa bahasa Melayu. Pelajar didedahkan dengan aspek-aspek nahu, klausa, terminologi, binaan ayat, penjodoh bilangan dan unsur sastera. Diharapkan pelajar dapat menguasai pertuturan atau berkomunikasi dengan baik dan mudah berdasarkan kemampuan pelajar asing.

BLLW 1212
ARABIC LANGUAGE 1

Learning Outcomes
In the end of the course, student will be able to:
1. Use the basic Arabic grammar correctly and apply the information from the text
2. Construct sentences and apply selected vocabulary in a report.
3. Demonstrate communication skills.

Synopsis
This basic Arabic course adopts the communicate approach and introduces the phonology, grammar, vocabulary and writing system. Students will be exposed to basic reading materials in the languages.

BLLW 1232
JAPANESE LANGUAGE 1

Learning Outcomes
In the end of the course, student will be able to:
1. Use grammar and classify the features of Japanese phonology correctly.
2. Demonstrate correct pronunciation.
3. Construct sentences and demonstrate writing skills.

Synopsis
This course is designed for students who do not have any background in Japanese. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. The grammar introduced is related to the language used daily by the Japanese. In addition, two types of Japanese language writing systems; Hiragana and Katakana are also introduced. Students are also exposed to elementary reading materials.

BLLW 1222
MANDARIN LANGUAGE 1

Learning Outcomes
In the end of the course, student will be able to:
1. Demonstrate the ability to converse in Mandarin with correct and accurate pronunciation and intonation.
2. Use the rules of Chinese writing and the theory of word and sentence formation.
3. Interpret the information in the simple text.

Synopsis
This course is designed for students who do not have any background in Mandarin. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. This course aims to help students to obtain enough exposure of the Mandarin phonetics (Han yu pin yin). The grammar introduced is related to the language used daily by Chinese. Particular care is also taken to ensure that the complexity of the dialogues is gradually developed using simple to complex sentences.

BLHW 2752
MALAYSIAN CULTURE

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Discuss issues related to Malaysian culture.
2. Present issues related to Malaysian culture.
3. Reflect the scenario of cultural diversity in Malaysia.
4. Describe an element in Malaysian culture.

Synopsis
This course exposes international students to the socio-cultural background of Malaysia which includes ethnic composition, religions, traditions and values. Other elements like music, arts, cuisine, costume, ethnic games, celebrations and national festivals are also highlighted. Student Centered Learning (SCL) methods such as group discussion and presentation will be used to assist international students in developing their understanding and appreciation of Malaysian culture.

BLHW 1762
PHILOSOPHY AND CURRENT ISSUES

Learning Outcome
In the end of this course, the students are able to;
1. Explain the current issues related to philosophy, National Education Philosophy and National Ideology.
2. Analyze the current issues based on main scholarly thought and various philosophical theories.
3. Examine the current issues according to philosophical comparative studies between dialogue and culture.

Synopsis
This course will discuss on the concept of knowledge, ethics and civilization which emphasize on comparative available systems, social development and multi-cross cultural activities in Malaysia. Besides, this course is stressing on current and contemporary issues discussion related to economy, politic, social, culture and environment based on ethical and civilizational approach. This course will cover the comparative system, developmental phase, social development and cross cultural activities in order to produce a man with positive values.

BLHW 2772
APPRECIATION OF ETHICS AND CIVILISATIONS

Hasil Pembelajaran

Pada akhir kursus ini, pelajar akan dapat:

1. Menjelaskan konsep etika daripada perspektif peradaban yang berbeza.
2. Membandingkan sistem, tahap perkembangan, kemajuan sosial dan kebudayaan merentas bangsa.
3. Membincangkan isu kontemporari berkaitan ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban.

Sinopsis

Kursus ini menerangkan tentang konsep etika daripada perspektif peradaban yang berbeza. Ia bertujuan bagi mengenal pasti sistem, tahap perkembangan, kemajuan dan kebudayaan sesuatu bangsa dalam mengukuhkan kesepaduan sosial. Selain itu, perbincangan berkaitan isu-isu kontemporari dalam aspek ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban dapat melahirkan pelajar yang bermoral dan profesional. Penerapan amalan pendidikan berimpak tinggi (HIEPs) yang bersesuaian digunakan dalam penyampaian kursus ini. Di hujung kursus ini pelajar akan dapat menghubungkaitkan etika dan kewarganegaraan berminda sivik.

BACHELOR OF MECHATRONICS ENGINEERING WITH HONOURS - BEKM

The Bachelor of Mechatronics Engineering with Honours (BEKM) is a synergistic combination of several engineering disciplines; namely electrical & electronic, mechanical, control, and computer systems design. This program aims to produce graduates who are competent in creating, designing and producing mechatronics products that consist of mechanical and electronic systems which require control of the computer system.

PROGRAMME IMPLEMENTATION - BEKM

This programme would take four (4) years minimum and consist of at least 135 credit hours. The programme emphasise on Mechatronics Engineering with the composition of the credits are as follows:

COMPONENTS		CREDIT HOURS	PERCENTAGE
Compulsory University Course (W)		12	8.89%
Co-Curriculum (W)		2	1.50%
Core Course (P)	Programme	99	73.33%
	Engineering Seminar	1	0.74%
	Industrial Training	5	3.70%
	Final Year Project	6	4.44%
Elective (E)	University	4	2.96%
	Programme	6	4.44%
Total		**135**	**100%**

This programme emphasizes on theoretical and tutorials, computer-aided learning, and problem-based learning (PBL). It also encourages active and cooperative learning activities other than carrying out assignments, job workshops, industrial training and final year project.

CURRICULUM STRUCTURE - BEKM

Students are required to keep record of their obtained grades for a given course as shown in Appendix C (Student Audit Form - BEKM) for graduation purpose.

COURSE DETAILS FOR BACHELOR PROGRAMME (BEKM)

BEKB 1131
ENGINEERING PRACTICE I

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Construct and demonstrate the operation of a basic electric circuits using basic electrical components.
2. Perform measurement and troubleshooting of electrical circuit operation using digital oscilloscope.
3. Construct, operate and troubleshoot a typical domestic lighting and ventilation (fan) system based on Malaysian standard installation practice.
4. Produce lab reports that confirm to standard engineering technical report.
5. Work in a group during the lab implementation and present the work results.

Synopsis
The Electrical Engineering Practice I is designed to provide the student with the knowledge to construct, operate, and troubleshoot simple electrical circuits using basic components, measuring instruments and techniques with proficiency. Some of the components and instruments used are, but not limited to, breadboard, wires, resistors and variable power supply. Students will be exposed to practice the various functions and use of typical electrical engineering tools, such as multimeter and oscilliscope for measurement and troubleshooting of circuit operation and performance. Finally, the students will construct a basic domestic lighting and fan wiring based on the Malaysian standard regulations.

BEKB 1231
ENGINEERING PRACTICE II

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the basic microcontroller programming language for dynamic mechanism application.
2. Construct and demonstrate relay control circuits.
3. Identify and describe basic characteristics and operation of digital components such as basic gates and it's combinational, adder and flip- flops clearly.
4. Investigate the basic characteristics and operations of diode, BJT and FET.
5. Exhibit soft skills such as communication skills and teamwork.

Synopsis
This course exposes students to practice with Arduino programming to solve simple engineering problem. Students also will be introduced to basic relay control circuit which covers on timer and hold circuits, digital electronics and electronics devices applications.

BEKC 2421
CONTROL SYSTEM ENGINEERING LABORATORY

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Design experiments according to the requirement of Control and Instrumentation System Engineering experiments. (PO4)
2. Analyze and interpret data and synthesize information related to Control and Instrumentation System Engineering experiments. (PO4)
3. Demonstrate practical competence in using Control and Instrumentation System Engineering software and apparatus. (PO5)
4. Report the findings in a way that is appropriate to the targeted audience. (PO9)

Synopsis
This laboratory provides students with practical activities related to signal and system as well as control and instrumentation theories. Students will carry out experiments regarding AC and DC bridges using oscilloscope, as well as modelling of open and closed loop system by using Lab-Volt Temperature Process Control Trainer. The simulation part covers practical application involving Real-time implementation based on problem-based learning design using MATLAB, SIMULINK, and Control System Toolbox, as well as simulation of Discrete- Time & Continuous-Time Signal and Fourier series using Symbolic Toolbox. Student will be exposed to methods to conduct and report investigation work including design of experiment, analysis of data, synthesis of information and evaluation of findings.

BEKC 2433
SIGNALS & SYSTEMS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the basic knowledge of signals and systems for continuous-time and discrete-time signals.
2. Analyze the linear time-invariant (LTI) systems in time-domain and frequency-domain.
3. Analyze the LTI systems using Z-Transform method.

Synopsis
This course will discuss about the introduction to signals and systems; classification of signals and systems; linear time- invariant systems and convolutions; Fourier series and Fourier transform; Fourier analysis for continuous-time and discrete- time signals; and Z-transforms method.

BEKC 2453
COMMUNICATION SYSTEMS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the basic principles of analogue & digital communication, data and computer network.
2. Analyse the analogue and digital communication techniques that are typically used in communication systems.
3. Explain the concept of computer system network.

Synopsis
Topics covered are: Introduction to Telecommunications, Transmission Modes, Power Measurements, Electromagnetic Frequency Spectrum, Bandwidth and Information Capacity, Amplitude Modulation Transmission & Reception, Single-Sidebands Communications Systems, Angle Modulation Transmission & Reception, FM Stereo, Noise in Telecommunication Systems, Digital Communication, Digital Transmission, PCM, Digital Modulation/ Demodulation, ASK, FSK, PSK, Data Communication & Computer Network. Frequency Division Multiplexing, Time Division Multiplexing, Space Division Multiplexing.

BEKC 3533
INTRODUCTION TO CONTROL SYSTEMS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the basic features and configuration of control systems and derive the mathematical model of physical system in frequency and in time domain.
2. Analyze control system performance and stability of linear control system in time and frequency domain.
3. Able to employ root locus method and its role in control system design.
4. Analyze the asymptotic approximation bode plots performances for first order and second order systems.

Synopsis
This course will introduces the students to the fundamental ideas and definition of control systems such as block diagrams, plants or processes, open-loop and close loop control systems, transfer functions, and transient and steady state responses. Students will be taught how to obtain mathematical models for actual physical systems such as electrical, mechanical, electromechanical and simple fluid flow systems in transfer function and state space equation. Methods of system representation such as block diagram representation and signal flow graphs will be examined. The students will also be exposed to techniques of analysing control systems such as time domain analysis and stability. Besides, the student will be taught on the design techniques such as Root locus and Bode plot. Finally, an introduction to the design and analysis of control systems using MATLAB will also be given.

BEKC 3543
MICROPROCESSOR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe and explain microprocessor (Motorola 68000) architecture and its operation. Able to illustrate the interfacing circuitry of microprocessor-based systems and its supporting components.
2. Write and apply the 68k Microprocessor instruction set operation in assembly language.
3. Describe and distinguish the concept of the Motorola 68000 microprocessor system with memory and peripheral device interface.
4. Develop and construct a microprocessor-based system and solve the problem related and prepare the technical report.

Synopsis

This course is about hardware and microprocessor handling, type of microprocessor systems, system handler and timing diagrams. The course covers the concept of MC68000 microprocessor software architecture, programming, assembly language and basic instruction, data transferring instruction, program control and subroutine, arithmetic and logic operations. It touches most on programming techniques, designing a microcomputer system, interfaces with memory and I/O devices. Students will experience PBL approach in this course where a PO-PBL will be introduced to the student.

BEKC 3643
CONTROL SYSTEM ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Understand and interpret control systems characteristics and specifications.
2. Analyze the problems of a system and point out the proposed solution.
3. Design and construct the compensators in time domain, frequency domain and state variable fedback systems.

Synopsis

This subject addresses compensator design in control systems engineering. In particular, the design of active and passive compensators via root locus technique; passive compensator via frequency response technique; state feedback controller design using pole placement technique; integral control and observer design via pole placement technique. The

compensator design concentrates on systems that can be modeled by Ordinary Differential Equations (ODEs), and that satisfy certain linearity and time-invariance conditions. Student must have sufficient knowledge in differential equations, basic concepts of control systems and signals & systems.

3. Ogata, K., Modern Control Engineering, 5th Edition, Pearson, 2010.

BEKC 4753
PLC & AUTOMATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the principles and fundamentals of programmable logic controllers (PLCs) and elements of automations system.
2. Use tools and equipments for PLC programming that related to industrial applications.
3. Design a basic automated PLC based system with consideration for specific needs.
4. Demonstrate communication skill through team work activities effectively.

Synopsis

This course will expose students with knowledge and skills of PLC including its principles and fundamental, main hard components, PLC programming languages, interfacing PLC with computers, integrating PLC hardware and software to design an automation system, introduction to automation system in manufacturing process, computer-integrated manufacturing (CIM) and industrial communication networking.

BEKC 4683
DIGITAL CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Transform continuous-time signals into discrete-time signals and to represent LTI digital control systems in z- domain.
2. Analyze the stability and performance of digital control systems in time, frequency, and z domains.
3. Analyze the digital control systems represented in state space model.
4. Design a digital PID controller and digital lead-lag compensators using root locus and frequency response methods, and state feedback using a pole-placement method.

Synopsis

This subject consists of discussions about an introduction to digital control systems, the relationship between continuous- time and discrete –time control systems, digital system coding, sampling process, quantization and z-transform, and digital control system representations. The notions of controllability, observability, and stability of digital control systems and analyses in time, frequency, and z domains are also included in this subject. The design of digital PID controllers, lead-lag compensators, and state

feedback and observer gain via a pole placement are covered in this subject. The analyses and design of digital control systems are performed using MATLAB and Simulink. Students are encouraged to gain scientific knowledge of contemporary issues related this subject.

BEKC 4873
ARTIFICIAL INTELLIGENCE

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Utilize the simulation tools for AI applications such as Simulink and MATLAB for appropriate industrial case studies.
2. Design basic fuzzy logic or neural network systems according to the engineering problem.
3. Demonstrate and analyze the performance of fuzzy logic and/or neural network using Simulink/ MATLAB or other specified tools.

Synopsis

Artificial Intelligence (AI) is a field of study concerns on allowing machines to imitate human's thinking or behaviour. By applying AI techniques, machines would be able to solve complex engineering problems such as predicting numbers of defect products in factory, optimizing a water tank system, classifying patients based on symptomps of a disease and etc. In this course students will be focusing on two popular sub topics in Artificial Intelligence area which is Neural Network and Fuzzy Logic. Students will be exposed towards the concept of Neural Network and/ or Fuzzy Logic and its implementation methods in controlling engineering system using appropriate tools such as SIMULINK/MATLAB.

BEKC 4883
ADVANCED MANUFACTURING SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the principles of manufacturing operation in advanced manufacturing system.
2. Investigate the operation of manufacturing system in advanced manufacturing industries.
3. Design an assembly line for production system using manufacturing system approach.

Synopsis

This subject is introduction to industrial field topics such as production system, manufacturing system, manufacturing operation, manufacturing models and metrics besides exposure to manual assembly lines

and automated assembly lines which applicable in industry. The analysis of quality control and quantitative analysis in FMS bottleneck models in this and product design using CAD/CAM in production system.

BEKE 2422
ANALOGUE ELECTRONICS APPLICATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the operation of small signal analysis and power amplification for electronics analogue devices.
2. Analyze the BJT, power amplifier, active filter, oscillator and voltage regulator.
3. Design active filter circuit, oscillator and voltage regulator in solving electrical engineering problem.

Synopsis

This course contains the application of electronic analogue devices in solving electrical engineering problems; focuses on small signal analysis (BJT), power amplification, active filter, oscillator and voltage regulator. In power amplification, three classes of the power amplifier are introduced which are power amplifier class A, class B and class AB. The active filter covers the usage of transistor or op-amps with RC circuit in producing the low-pass filter, high-pass filter, band- pass filter and band- stop filter. The wave generation using op-amp and timer 555 is applied in the oscillator part. Finally, the concept of voltage regulator based on transistor for linear shunt and series regulator as well as the integrated circuit voltage regulator is covered.

BEKG 1123
PRINCIPLES OF ELECTRIC AND ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic electrical and electronics principles, circuit schematics and components.
2. Solve basic electric DC circuits using electrical and electronics principles.
3. Explain the operating principles of semiconductor devices for Diode, BJT, FET and Op Amp.
4. Analyze the operating principles of semiconductor devices and electrical and electronics to solve the Diode, BJT, FET and Op- Amp circuits.

Synopsis

This course will discuss about the basic principles of electrical and electronics; such as fundamental knowledge on electric element, principles of electricity, units associated with basic electrical quantities, symbol and components. Then the study on how to apply circuit theory to the solution of simple circuits and networks by the application of Ohm's law and Kirchhoff's laws,

and the concepts of potential and current dividers in solving DC series and parallel circuit is explained. Then, the behaviour of semiconductors and the way in which they are employed in diodes will be discussed. The semiconductor theory and devices covers the atomic structures, energy band, P-type and N-type and how these materials are employed to form devices such as diode and BJTs. Then the application and calculation of diode, DC biasing of Bipolar Junction Transistor (BJT),DC biasing of Field Effect Transistor (FET) and Operational-Amplifier (Op-Amp) circuits is explained.

BEKG 1233
PRINCIPLES OF INSTRUMENTATION AND MEASUREMENT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the principle, various terms and standards in measurement.
2. Explain the principle of measurement devices
3. Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.
4. Explain the operation, function and applications of the transducers/sensors.

Synopsis

This course will discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement. It covers most on the measurement devices such as galvanometers, ammeters, voltmeters, wattmeter, temperature, force and torque and pressure measurement as well as accelerator meter. It also introduces oscilloscope and sensors for instrumentation application.

BEKG 2433
ELECTRICAL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the major components of an electrical power system (generation, transmission, and distribution system).
2. Calculate the AC voltage and current characteristic in AC circuits.
3. Analyze the single and three phase circuits by emphizing on complex power and power factor correction.
4. Analyze the magnetic, single phase transformer and three phase transformer equivalent circuits.

Synopsis

This subject introduces students to topics such as alternating current circuit analysis, phasor representation, RMS value, average power, reactive power, active power, apparent power, power factor and power factor correction for single phase and balance three phase system. In addition, magnetic circuit, construction and operation of transformer will be discussed in this subject.

BEKG 2452
NUMERICAL METHODS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Use various numerical methods to find roots for nonlinear equations and solve for linear systems.
2. Determine polynomials using interpolation and curve fitting.
3. Apply numerical methods in differentiation, integration, ordinary differential equations and partial differential equations to solve the mathematical problems.
4. Implement numerical methods in solving engineering problems.

Synopsis

Topics covered: Errors; Solution of Nonlinear Equations; Solution of Linear Systems; Interpolation and Curve Fitting; Eigenvalues and Eigenvectors; Numerical Differentiation; Numerical Integration; Solution of Ordinary Differential Equations; Solution of Partial Differential Equation.

BEKM 2321
MECHANICAL ENGINEERING LABORATORY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Conduct investigation on the experiments which includes statics and mechanics of material, dynamics and mechanisms, and fluid mechanics correctly using mechanical resources.
2. Analyze data gathered during experiments using software tools.
3. Communicate effectively through technical report writing.

Synopsis

This mechanical laboratory experiments will cover three courses, Statics and Mechanics of Material, Dynamics and Mechanisms and Fluid Mechanics.

Axially loaded test, shear and torsion tests will cover the Statics and Mechanics of Material course. Laboratory experiments for Dynamics and Mechanisms consists of accelerated rotational movement, belt drives and gear efficiency and Fluid Mechanics will cover Bernoulli theorem and Reynolds number.

BEKM 2342
INTRODUCTION TO MECHATRONICS SYSTEM

Learning Outcomes

Upon completing this course, the student should be able to:

1. Explain basic concept of mechatronics systems.
2. Explain the working principles of mechatronics systems.
3. Analyze selection and integration of mechatronics components.
4. Identify and analyse basic mechatronics system.

Synopsis

This course introduces the concept of mechatronics system and its element and integration. Topics that are covered includes the following: Introduction to sensors and transducers, performance terminology, static and dynamic characteristics. Example of relevant sensors, selection of sensors. Inputting data by switches. Introduction to signal conditioning, operational amplifier, protection, filtering, wheatstone bridge, digital signal, multiplexers, data acquisition, digital signal processing, pulse modulation. Displays, data presentation elements, magnetic recording, displays, data acquisition systems, testing and calibration. Introduction to actuation systems, introduction to pneumatic and hydraulic systems, directional control valves, pressure control valves, cylinders, process control valves, rotary actuators. Introduction to mechanical systems, types of motion, kinematic chain, cams, gear trains, ratchet and pawl, belt and chain drives, bearings, mechanical aspects of motor selection. Introduction to electrical systems, mechanical switches, solid-state switches, solenoids, D.C. motors, A.C. motors, stepper motors. Mathematical models, mechanical system building blocks, electrical system building blocks, fluid system building blocks, thermal system building blocks. System model of engineering systems, rotational- translational systems, electromechanical systems and hydraulic-mechanical systems. Brief description of mechatronics system related topics: system transfer function, frequency response, closed loop controller, digital logic, microprocessor, assembly language, C language, input/output systems or interfacing, programmable logic controllers, communication systems, fault finding.

BEKM 3453
MICROCONTROLLER TECHNOLOGY

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the knowledge of microcontroller's architecture, operations of peripherals and subsystems.
2. Analyze control Direct Current (DC), servo and stepper motors using microcontroller and relevant driver circuits.
3. Design the application of Analog to Digital Converter with LCD display/Keypad/RS232/ EEPROM modules.
4. Utilize the microcontroller based system application software or hardware for Problem Based Learning.
5. Exhibit technical writing and explain to design of the Problem Based Learning amplification.

Synopsis
Basic concept of microcontroller in terms of the architecture, usage and the differences between microcontroller and microprocessor. Exploring the available PIC Modules such as Timers, Analog to Digital Converter, Pulse Width Modulation, EEPROM, USART and interrupt capabilities for external or internal peripheral and hardware controlling. Students will practically implement the knowledge to apply in the project oriented Problem Based Learning.

BEKM 3543
ELECTROMECHANICAL SYSTEM

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Comprehend the basic principle of electromechanical energy conversion and operation of electrical machines.
2. Investigate and analyze the torque speed characteristics of electric motors and their corresponding drive requirements.
3. Design the drive for electrical motors according to application requirements and appropriate mechanical model.

Synopsis
This course focuses on the applications of electrical machines as primary mover for mechanical systems. Students are introduced to the basic principle of electromagnetics and the constructions of electrical machines. Then, an emphasis is put on electric motors and how to control them. Finally, students are exposed to general steps required in analyzing a drive system for mechanisms, modelling the mechanism's dynamics and selecting appropriate motor and its drive for the application.

BEKM 3641
MECHATRONICS ENGINEERING LABORATORY I

Learning Outcomes
Upon completion of this laboratory course, the student should be able to:
1. Design and analyze a controller for mechatronics system by using PLC.
2. Design and demonstrate the appropriate solution to actuate a mechatronics system by using pneumatic and hydraulic circuits.
3. Analyze and evaluate the accuracy of the integrated PLC and electropneumatic system performance by using statistical method.
4. Exhibit technical writing to solve complex problem.

Synopsis
In this lab session, students are exposed to the lab works of major fluid power technologies; pneumatics and hydraulics as well as the lab works in automation using Programmable Logic Controller (PLC). In fluid power technology, students will learn the operation of a single acting and double acting cylinder, the application of electro-pneumatic and electro- hydraulic control technology, the application of pressure relief valve and flow control valve as well as the logic "AND" and "OR" operation. In automation, the students will be enlightened to draw the ladder diagram, perform console programming and mnemonic code using PLC as well as designing and executing timer and counter application. Finally, students will carry out the pneumatic and hydraulic control programming using PLC.

BEKM 3653
INTEGRATED DESIGN PROJECT

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Design solutions by synthesizing electrical engineering knowledge that will solve complex electrical engineering problem in accordance to relevant standards and with appropriate consideration for public health and safety, cultural, societal, environmental and sustainability factors.
2. Utilize modern engineering and IT tools in facilitating solution to complex electrical engineering problems with an understanding of the limitations.
3. Evaluate the impact of the designed product, components or processes, in terms of safety, environmental and sustainability factors.
4. Demonstrate effective teamwork skills in completing the electrically integrated design project.
5. Apply project management and financial knowledge effectively in completing the electrically integrated design project.

Synopsis
Electrical engineering project is integrated design project where student have to design project where students have to design an electrical and electronic engineering project including project management, project planning, project feasibility study, design selection, design costing and sizing, analysis and evaluation. The course focuses on the implementation and integration of product/conceptual design development to produce a comprehensive final technical report, including engineering proposals and drawings, specifications and bills of quantities, cost estimates of development projects given to students, working in groups. Apart from basic

electrical and electronic design, students are also required to integrate their knowledge of other engineering such as (but not limited to) circuit design and analysis, including component selections, project scheduling techniques and sustainable development considerations into their overall project work. At the end of this course, the students will be able to comprehend the needs and requirements for product design procedures and are able to appreciate the importance of integration and synthesis of various of electrical engineering knowledge.

BEKM 4751
MECHATRONICS ENGINEERING LABORATORY II

Learning Outcomes

Upon completion of this laboratory course, the student should be able to:

1. Identify and describe robot specification and workspace properly.
2. Design procedures to manipulate robot movement by using teach pendant/console and RoboTalkTM programming software.
3. Design procedure to develop a robotic gripper and test it using Rhino robot.
4. Analyze and evaluate the accuracy, repeatability and reliability of the robot performances by using statistical method.

Synopsis

In this course, students are exposed to the lab works related to the development and application of mechatronics/robotic system. Firstly, student will learn the robotic system specification. After that, students will design procedures to develop a robotic gripper and program the robot to a specific task. In the design process, students will be exposed to the engineering tools such as Solid Work, teach pendant/console programming and RoboTalkTM software. Student design should take into account the appropriate sensor, controller and actuator for their design for safety purpose. At the end of the lab work, students will analyze and evaluate the accuracy, repeatability and reliability of the robot performances by using statistical method.

BEKM 4763
ROBOTICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply knowledge in physics and mathematics to the solution of complex kinematics and dynamics.
2. Analyze the effects of controller gains on the motion of a robotics system.
3. Design robot trajectories based on safety and environmental needs.

Synopsis
This subject introduces robotic fundamentals including kinematics (forward, reverse, jacobian, and singularity), dynamics and trajectory generation of robots. Fundamental mathematics, scientific and mechatronics engineering knowledge will be applied in this subject to the solution of complex robotic problems. In developing the solution of the robotics problem, student will be exposed to influential factors that might affect the design of the solution including safety and environmental factors. Throughout the semester, student will be exposed to robotics simulation software to enhance their understanding of robotics knowledge.

BEKM 4783
MACHINE VISION

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the application areas, restrictions, and structure of machine vision systems.
2. Identify the operation of digital images: capture them and extract basic visual information from images. (P03)
3. Analyze and apply the basics of machine learning and approaches to decision making.
4. Implement an algorithm using an image processing and image understanding tools.
5. Exhibit soft skills such as communication skills, spirit of teamwork and life-long learning.

Synopsis
This course is to introduce the theory, applications and techniques of machine vision to students, and to provide students with an understanding of the problems involved in the development of machine vision systems. The course begins with low level processing and works its way up to the beginnings of image interpretation. This approach is taken because image understanding originates from a common database of information. The learner will be required to apply their understating of the concepts involved through the process of building applications that manipulate bi-level and grey scale images through the use of suitable packages (e.g. Matlab or OpenCV).

BEKM 4823
DATA COMMUNICATIONS & COMPUTER NETWORKING

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain and apply the schemes and methods used for tasks in data communication of computer network.
2. Describe and analyze the coding schemes, transmission modes, transmission methods, communication modes, error detection methods, flow control, and error control in a network.
3. Classify the OSI model, IEEE 802.x model, transmission media, network services, repeater, bridges, router and gateways.
4. Describe and analyze the network operation and technology of LAN, wireless Lan, Wan and routing.
5. Design a basic network configuration for local area network (LAN).

Synopsis
Topics covered are: Introduction to Computer Network, Data Communications, Network Structure, Local Area Network, Wide Area Network, Interconnection, Internetworking. That include the network models / topology / type and technology and its application. Characteristics of analog signals, digital signals, coding schemess, transmission modes, transmission methods, communication modes, bandwidth and signal transmission, digital signal encoding, error detection method, error and flow control, datalink control, multiplexing, synchronous & asynchronous transmission. Standard organization and OSI model, LAN topology, wired & wireless LAN, circuit switching, packet switching and comparison. Interconnection issues and architecture. Repeater, bridge, router & gateway. Structure of network layer. Internet Protocol, TCP/IP ans ISO Internet Protocol.

BEKU 1123
ELECTRIC CIRCUIT 1

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Analyse electrical circuit using Ohm's Law and Kirchhoff's Laws.
2. Apply Mesh and Nodal methods for DC and AC circuit analysis.
3. Analyze DC an AC circuits using Superposition, Thevenin, Norton and Maximum Power Transfer Theorems.

Synopsis
This course introduces the students to Ohm's Laws, Kircchoff's Laws and use them to calculate current, voltage and power in electrical circuitries. Students also learn the analytical methods namely mesh and nodal analysis, as well as apply Thevenin theorem, Norton theorem, Superposition and the Maximum Power Transfer in circuit analysis. The applications of the above tools will cover both dc and ac circuits.

3. Nilsson and Riedel, Electric Circuits, Prentice Hall, Electric Circuits (9th Edition), 2010.

BEKU 1231
ELECTRICAL & ELECTRONICS ENGINEERING LABORATORY

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Measure the electrical characteristics of single-phase and three-phase ac circuit precisely.
2. Construct the combination of logic circuit and ICs using suitable and appropriate components.
3. Perform simulations of RLC circuits in order to study their characteristics.
4. Exhibit good communication skills through technical writing.

Synopsis
This course will expose students to perform experiments to support the theory such as to observe the capacitor charge and discharge process, build and analyze the second order circuit using pspice. The experiments also include the single phase and three phase circuits with resistive and inductive loads and measurement of voltage, current, power, power factor and single phase transformer. Lastly student will conduct experiments with logic circuit integration, ics and flip- flops circuit.

4. Addison-Wesley, Prentice Hall. Hughes, Electrical Technology, 10th Ed. Prentice Hall.

BEKU 2333
ELECTRICAL CIRCUIT II

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Analyze first order and second order circuit for transient and steady state response.
2. Apply Laplace transforms method to analyze circuit response in frequency domain.
3. Analyze the frequency response of RLC circuits and the characteristics of RLC filters.
4. Analyze various topology of two-port network in electrical circuit analysis.

Synopsis
This course exposes student to the application of several techniques in analyzing electrical circuits, such as the Laplace transform and two ports network. The students are required to use appropriate tools to analyze transient and frequency response in electrical circuit.

References
1. K.A. Charles,N.O. Sadiku, Fundamentals of Electric Circuits, 6th Ed. McGraw Hill, 2016.

BEKU 3695
INDUSTRIAL TRAINING

Learning Outcomes
Upon completion of this course, the students should be able to:
1. Apply appropriate techniques and technical knowledge which is relevant for student field of study.

2. Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
3. Demonstrate soft skill especially communication skill at all level.
4. Work affectively as an individual, team members and as a leader as well.
5. Acquire new knowledge, life-long learning and aware to new technology.

Synopsis

All bachelor degree students are required to undergo industrial training as part of their curriculum to complete their four (4) years course for the Bachelor of Electrical Engineering (BEKG) and Bachelor of Mechatronics Engineering (BEKM). It is compulsory for all degree program students to undergo the Industrial Training Programme.In general, the aim of industrial training are to give exposure, experience and professional skills to various aspects of engineering discipline, in particular in electrical engineering related industries. The students are also expected to be familiarized with efficient, accountable and ethical conduct as they will be supervised directly under the company's personnel as well as supervisors from the faculty. Apart from that, the assessment will be made by the appointed faculty supervisors & the industry supervisors.

BEKU 4861
ENGINEERING SEMINAR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the professional engineering knowledge, practices and responsibilities.
2. Collect and sort relevant information with regards to the given technical talk.
3. Discuss current engineering issues and practices that impacting engineering professionals.

Synopsis

The main purpose of this course is to instill the recognition of the need for and the ability to engage in life-long learning among students. Through presentation by invited speakers from the industry and academia, students will be exposed to topics such as professional engineering bodies and knowledge of in contemporary issues in related engineering fields. Presentation by successful alumni describing how their careers developed after obtaining their undergraduate degrees will also be included.

BEKU 4792
FINAL YEAR PROJECT 1

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Conduct proper literature survey and identify the problems, objectives and scope of project clearly.
2. Select, plan and execute a proper methodology in problem solving.
3. Present the project proposal in written and in oral format effectively.
4. Work systematically and commit to professional ethics.

Synopsis

This course is the first part of the Final Year Project which requires two semesters to complete. For the first semester as of this subject, student(s) and supervisor(s) are expected to have two way communications which later comes to an agreement of project topic leading to project supervision and project learning process collectively. At the end of the semester, students are required to deliver first year progress report which generally covers abstract, problem statement,

objectives, scope of works, literature review, proposed methodology, early results and general conclusion. Sessions for oral presentation is also held to measure student's level of understanding and capability on carrying specified project.

References
Depend on each student project's references.

BEKU 4894
FINAL YEAR PROJECT II

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Identify, formulate, research literature and analyze problem.
2. Conduct investigation using research based knowledge and methods.
3. Apply ethical principles in project implementation.
4. Present the results in written and in oral format effectively.
5. Identify basic entrepreneurship skills in project management.
6. Apply reasoning informed by contextual knowledge.
7. Engage in independent and lifelong learning.

Synopsis
This course is the second part of Final Year Project I, in second semester. Students will continue their project from FINAL YEAR PROJECT I (BEKU 4792) during the second semester, and they should accomplish the projects completely either in hardware, software or both of them. Students needs to write-up a good final report (in thesis format), as a part of the course's assessment.

References
Depend on each student project's references.

SERVICE COURSES (FKEKK)

BENG 1413
DIGITAL ELECTRONICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Describe the number system, basic concept and terminology of digital circuits that form complex electronic systems.
2. Analyze the basic digital circuits based on combinational and sequential components.
3. Communicate effectively through effective report writing or oral presentation.

Synopsis
The outcome of this course is to deliver knowledge, understanding and application of the digital electronics. The course begin with the introductory concepts of digital technology, number systems and codes. Then, logic gates and Boolean algebra will be explored. Apart from that, combinational logic circuits and functions of combinational logic will be introduced. Students will also be enlightened with latches and flip-flops. Finally, this course will also introduce integrated circuit technology where students also will be explored to semiconductor technology for the project assignment. This course will also expose the students to current application in the digital electronics industry.

BENG 2143
ENGINEERING STATISTICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply the concepts of data description, normal and sampling distributions, estimation and hypothesis testing, ANOVA, regression and non-parametric tests to solve mathematical problems.
2. Analyze engineering data using descriptive statistics.
3. Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression.

Synopsis
Topics covered: Data description and probability, Normal and Sampling Distributions, Estimation and Hypothesis Testing for one and two populations, ANOVA, Simple Linear Regression, Multiple Linear Regression, Polynomial Regression, Non-parametric Statistics and Software application (SPSS).

BENG 4322
ENGINEER AND SOCIETY

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply ethical principles and commitment, to professional ethics, responsibilities and norms of engineering practice.
2. Apply reasoning informed by contextual knowledge to assess health, safety and legal issues and its subsequent responsibilities, relevant to professional practice.
3. Understand the needs for sustainable development and the impact of engineering solutions on society and environment.

Synopsis
This course will discuss about:
Ethics and professionalism, engineers and society, professional ethics, code of ethics, ethics dealing with human relations, BEM, IEM, regulations on professional conduct, route to professional status, engineers as an employee or employer, decision making, competence of practicing engineering, accountability, liability, engineer's legal liability specified in contract law, engineers and the environment, sustainability, etc.

SERVICE COURSES (FTMK)

BITG 1233
COMPUTER PROGRAMMING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the fundamental principles of problem solving, programming techniques and structures in program development.
2. Explain the principles of problem solving and programming techniques to solve given problems.
3. Construct computer program codes by applying suitable programming structures and techniques.

Synopsis

This course covers the introductory topics in programming using C++ language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

SERVICE COURSES (FKM)

BMCG 1013
DIFFERENTIAL EQUATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic concept of first and second order differential equations, Laplace Transform and Fourier series.
2. Select an appropriate technique to solve problems involving differential equations.
3. Apply the concept of differential equations in solving engineering problems.

Synopsis

This course provides an introductory knowledge to differential equations and its applications. The students are introduced to the first order differential equations and solve using analytical methods of separable variable and linear equations and also using numerical methods such as Euler's method and second order Runge-Kutta method. Upon completion, the students are then introduced to the second order linear differential equations with constant coefficients and learn the methods of solving and its applications. The course is extended to the following chapters which include Laplace transform, Fourier series and partial differential equations and solving using numerical methods which is finite difference method (Parabolic, Hyperbolic).

BMCG 1123
STATICS & MECHANICS OF MATERIAL

Learning Outcomes
Upon completion of this course, the student should be able to:
1. State the basic concept of force and material mechanics.
2. Identify the force and stress on a mechanical system.
3. Analyze the force and stress on a mechanical system.

Synopsis
Statics

Introduction to basic concepts in statics and mechanics as a study of physical sciences, system of units, scalars and vectors, free body diagram, forces system resultants and moments, equilibrium of a particle, equilibrium of a rigid body, structural analysis, center of gravity and centroid.

Material Mechanics

Introduction to various type of structures, type of supports, concepts and definition of stress, strains, torsion, shear force and bending moment, theory on axial loading, torsion, pure bending and beam deflection, and combination of loads.

BMCG 1253
DYNAMICS & MECHANISM

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Apply and analyze the principle of kinematics of a particle.
2. Apply and analyze the principle of kinematics of a rigid body.
3. Understand and apply the concept of belt amd gear system.
4. Analyze gyroscopic effect and fundamental vibration problem of a system.

Synopsis
This course consist of two parts, Dynamics and Mechanics of Machines. A Dynamics topic introduces the basis principle of mechanics of particles and rigid bodies, kinetics for systems of particles, kinematics of rigid bodies. For Mechanics of Machine, the course will cover of Friction- based power transmission system, balancing system including gyroscope and vibration. It will introduce to students the principles and simple applications.

BMCG 1523
ENGINEERING GRAPHICS AND CAD

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Explain the engineering graphics fundamentals.
2. Construct technical drawing using manual sketching and computer aided design.
3. Communicate by using engineering drawings.

Synopsis
The course concentrates on manual drafting and Computer Aided Drafting (CAD) software. For manual drafting, students will be exposed to the basic drafting tools, techniques and the application in producing various types of engineering drawing. For computer aided design, CAD engineering drawing software is exercised to produce engineering drawing. The students will be exposed to CAD interface, editing commands, coordinate system, template preparation and layer in order to produce various types of engineering drawing.

BMCG 2372
FLUID MECHANICS

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Define basic concept in fluid mechanics.
2. Apply fluid mechanics equations in solving problems related to fluid mechanics.
3. Analyze problems related to fluid mechanics and solve them in a systematic manner.

Synopsis
This course introduces students the basic physical properties of fluid and the definition of pressure and head. Then, the derivation of hydrostatic equation and its application in pressure measurement, static forces analysis on immersed surface and buoyancy analysis are presented. For fluid dynamics, the introduction to fluid dynamics and fluid flow analysis followed by the derivation of flow equations, the application of energy equation and Bernoulli equation in the calculation of flow velocity, discharge, and head lost in piping systems are discussed. In the final chapter, the knowledge of dimensional analysis and its application are instilled.

BMCG 3643
HYDRAULIC & PNEUMATIC SYSTEMS

Learning Outcome

Upon completion of this course, the student should be able to:

1. Explain the common hydraulic and pneumatic components, their use, symbols, and their applications in industry.
2. Analyze mathematical models of hydraulic and pneumatic circuits to study the performance of the system.
3. Design hydraulic and pneumatic system manually and using related computer software.
4. Simulate and troubleshoot the circuit of the hydraulic and pneumatic system.

Synopsis

This course covers the introduction of hydraulic and pneumatic systems, types of pump, compressor, working principles, types of valve, actuator, and performance of the fluid power system. The understanding enhanced to the fluid power system ancillaries, sensors, fluid power circuit design, and electrical control. The computer software is used to design and simulate the fluid power circuit. The programmable logic controller has been utilized one step ahead to control the pneumatic robotic and mobile hydraulics.

BMCG 3653
THERMODYNAMICS & HEAT TRANSFER

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe basic terms of thermodynamics and use property tables to define the state of the systems.
2. Apply the concept of First Law of Thermodynamics in Closed Systems and Control Volumes.
3. Apply the concept of Second Law of Thremodynamics to determine the performance of heat engines, refrigerators and heat pumps.
4. Implement the concept of heat transfer such as conduction, convection and radiation through plates, cylinders and spheres including electronics system such as transistor and electric wire.

Synopsis

This course covers the basic concepts and definitions of engineering thermodynamics, energy, work and heat, properties of pure substances (relationships of P-v, T-v, P-T and Ts diagrams), First Law of Thermodynamics and Second Law of thermodynamics. It also will cover the different modes of heat transfer, definition of conduction, convection, radiation, thermal conductivity, Fourier's law of conduction, heat transfer coefficients, Newtons's law of cooling, Steffan- Boltzman constant, emissivity of black bodies, heat transfer through plates, cylinders and spheres.

SERVICE COURSES (FKP)

BMFG 1313
ENGINEERING MATHEMATICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector- valued functions.
2. Solve the mathematical problems that involve matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector- valued functions by using an appropriate technique.
3. Apply the knowledge of engineering mathematics to deal with the engineering problems.

Synopsis

This course consists of three chapters: Functions of Several Variables, Multiple Integrals and Vector-valued Functions. The syllabus is developed by introducing the concepts of the functions with severable variables, integration and also vector- valued function, followed by learning various techniques in solving the problems and its application in physical and engineering fields.

BMFG 1213
ENGINEERING MATERIALS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic concepts of engineering materials in terms of interatomic bonding and crystal structure.
2. Analyze the properties of engineering materials based on its structure.
3. Describe the processing methods for engineering materials.

Synopsis

This course introduces basic concepts of engineering materials that covers introduction to engineering materials, interatomic bonding, crystalline structure and imperfections and diffusion in solid. Introduction to the binary phase diagrams are also provided. Explanation on different types of engineering material (i.e. metal, ceramic, polymer, composites and functional), its mechanical properties, basic processing and applications are also included.

SERVICE COURSES
(FPTT, PPB, IPTK & CO-CURRICULUM UNIT)

BTMW 4012
ENTERPRENEURSHIP TECHNOLOGY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Recognize the importance of entrepreneurship, the role of entrepreneurship in today's society, and the technical knowledge of the entrepreneurial process.
2. Explain the basic concepts of interdisciplinary competences in management, and create technology- based businesses.
3. Present a business plan project and develop an entrepreneurial profile.

Synopsis

The course provides students with technological knowledge about entrepreneurship as well as the skills to turn such knowledge into practice. The teaching and learning (T&L) activities include case study and field work with the aim to inculcate entrepreneurship values and entrepreneurship acculturation with a view to successfully launch and subsequently manage their enterprises. Students will be exposed with the support systems available or government agencies in starting new ventures, including the tactics commonly employed by entrepreneurs starting a business. The course allows students to critically evaluate business in terms of technical feasibility, investment potential, and risks.

BLHC 4032
CRITICAL AND CREATIVE THINKING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the basic principles of critical and creative thinking skills to solve everyday problems.
2. Provide feedback on issues related to the development of critical and creative thinking skills.
3. Solve problems of case studies on current issues related to their field of study.
4. Analyze future market requirements and propose a solution based products..

Synopsis

This course is designed to expose students to the principles foundation in critical and creative thinking. Students will apply the methods of critical thinking and creative problem- solving through a student-centered approach including approaches of problems based learning (PBL). Students will be guided in the final project where the analysis of future market requirements will be implemented and proposed solutions are based on the product market requirements from multiple perspectives and thinking outside the box.

BLLW 1172
MALAY COMMUNICATION I

Hasil Pembelajaran
Pada akhir kursus ini, pelajar akan dapat:
1. Memberikan respon terhadap perbualan biasa dan situasi-situasi lain.
2. Mengaitkan bunyi-bunyi atau ucapan dalam Bahasa Melayu dari segi nahu, fonologi dan kemahiran lisan tentang diri sendiri, keluarga, rakan-rakan and aktiviti harian.
3. Membincangkan secara mudah tentang sesuatu topik semasa.
4. Membina ayat dan bertutur dalam bahasa Melayu dengan gramatis.

Sinopsis
Kursus ini memperkenalkan susuk tatabahasa bahasa Melayu. Pelajar didedahkan dengan aspek-aspek nahu, klausa, terminologi, binaan ayat, penjodoh bilangan dan unsur sastera. Diharapkan pelajar dapat menguasai pertuturan atau berkomunikasi dengan baik dan mudah berdasarkan kemampuan pelajar asing.

BLLW 1212
ARABIC

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Use the basic Arabic grammar correctly and apply the information from the text.
2. Construct sentences and apply selected vocabulary in a report.
3. Demonstrate communication skills.

Synopsis
This basic Arabic course adopts the communicate approach and introduces the phonology, grammar, vocabulary and writing system. Students will be exposed to basic reading materials in the languages.

BLLW 1232
JAPANESE

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Use grammar and classify the features of Japanese phonology correctly.
2. Demonstrate correct pronunciation.
3. Construct sentences and demonstrate writing skills.

Synopsis
This course is designed for students who do not have any background in Japanese. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. The grammar introduced is related to the language used daily by the Japanese. In addition, two types of Japanese language writing systems; Hiragana and Katakana are also introduced. Students are also exposed to elementary reading materials.

BLLW 1222
MANDARIN

Learning Outcomes
Upon completion of this course, the student should be able to:
1. Demonstrate the ability to converse in Mandarin with correct and accurate pronunciation and intonation.
2. Use the rules of Chinese writing and the theory of word and sentence formation.
3. Interpret the information in the simple text.

Synopsis
This course is designed for students who do not have any background in Mandarin. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. This course aims to help students to obtain enough exposure of the Mandarin phonetics (Han yu pin yin). The grammar introduced is related to the language used daily by Chinese. Particular care is also taken to ensure that the complexity of the dialogues is gradually developed using simple to complex sentences.

BLHW 1762
PHILOSOPHY AND CURRENT ISSUES

Learning Outcome
Upon completion of this course, the student should be able to:
1. Explain the current issues related to philosophy, National Education Philosophy and National Ideology.
2. Analyze the current issues based on main scholarly thought and various philosophical theories.

3. Examine the current issues according to philosophical comparative studies between dialogue and culture.

Synopsis

This course will discuss on the concept of knowledge, ethics and civilization which emphasize on comparative available systems, social development and multi-cross cultural activities in Malaysia. Besides, this course is stressing on current and contemporary issues discussion related to economy, politic, social, culture and environment based on ethical and civilizational approach. This course will cover the comparative system, developmental phase, social development and cross cultural activities in order to produce a man with positive values.

BLHW 2772
APPRECIATION OF ETHICS AND CIVILISATIONS

Hasil Pembelajaran

Pada akhir kursus ini, pelajar akan dapat:

1. Menjelaskan konsep etika daripada perspektif peradaban yang berbeza.
2. Membandingkan sistem, tahap perkembangan, kemajuan sosial dan kebudayaan merentas bangsa.
3. Membincangkan isu kontemporari berkaitan ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban.

Sinopsis

Kursus ini menerangkan tentang konsep etika daripada perspektif peradaban yang berbeza. la bertujuan bagi mengenal pasti sistem, tahap perkembangan, kemajuan dan kebudayaan sesuatu bangsa dalam mengukuhkan kesepaduan sosial. Selain itu, perbincangan berkaitan isu-isu kontemporari dalam aspek ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban dapat melahirkan pelajar yang bermoral dan profesional. Penerapan amalan pendidikan berimpak tinggi (HIEPs) yang bersesuaian digunakan dalam penyampaian kursus ini. Di hujung kursus ini pelajar akan dapat menghubungkaitkan etika dan kewarganegaraan berminda sivik.

DR. SAIFULZA BIN ALWI @ SUHAIMI
Senior Lecturer
Ph.D. in Electrical & Comp. Engineering, Yokohama National University, Japan
M.Eng. Inst. of Tech. Japan,
B.Eng. (Hons) Control Engineering & Science, Kyushu Inst. of Tech
Area of Interest: *Industrial Automation & Discrete Event System*
saifulza@utem.edu.my
+606-270 2166
B/2-5

DR. MAASPALIZA BINTI AZRI
Senior Lecturer
Ph.D. in Power Electronics, University of Malaya
M.Eng. (Power), UPM
B.Eng. (Electrical Engineering), UiTM
Area of Interest: *Power Electronics Converter, Renewable Energy*
maaspaliza@utem.edu.my
+606-270 2185
A/2-20

IR. DR. ELIA ERWANI BINTI HASSAN
Senior Lecturer
Ph.D. in Electrical Engineering, UiTM
M.Eng. (Electrical Engineering), UTM
B.Eng. (Electrical Engineering), UiTM
Area of Interest: *PO Attainment Calculation*
erwani@utem.edu.my
+606-270 2249
A/1-21

DR. AUZANI BIN JIDIN
Senior Lecturer
Ph.D. Electrical Engineering UTM
M.Sc., B.Eng. in Electrical Engineering, UTM
Area of Interest: *Power Electronics & Motor Drives*
auzani@utem.edu.my
+606-270 2188
A/3-3

DR. FAZLLI BIN PATKAR
Senior Lecturer
Ph.D. Electrical Engineering, Liverpool John Moores University, UK
M.Eng. (Electrical-Power), UTM
B.Eng. (Electrical), UTM
Area of Interest: *Power Electronics & Motor Drives*
fazlli@utem.edu.my
+606-270 2191
B/3-19

DR. AZRIȚA BINTI ALIAS
Senior Lecturer
Ph.D. in Electrical Engineering, Universiti Malaya
M.Eng. (Electrical), UTM
B.Eng. in Electrical (Control & Instrumentation), UTM
Area of Interest: *Control Design & Application, Power Converters*
azrita@utem.edu.my
+606-270 2160
A/1-3

DR. RAHIFA BINTI RANOM
Senior Lecturer
Ph.D. (Mathematics), University of Southampton, UK M.Sc. (Mathematics), UTM
B.Sc. (Industrial Mathematics), UTM
Area of Interest*: Applied Mathematics, Numerical Analysis, Mathematical Modelling, Asymptotic Analysis*
rahifa@utem.edu.my
+606-270 2217
A/G-4

DR. JURIFA BINTI MAT LAZI
Senior Lecturer
Ph.D. in Electrical Engineering, UTeM
M.Eng. (Electrical Engineering), UTM
B.Eng. (Electrical Engineering), UTM
Area of Interest: *Machine Drives & Power Electronics, PMSM Drives, Sensorless Drives, Power System*
jurifa@utem.edu.my
+606-270 2131/+6019-3844707
A/1-20

DR. WAHIDAH BINTI ABD. HALIM
Senior Lecturer
Ph.D. Electrical Engineering, UM
M.Sc. Electrical Power Engineering, UPM
B.Eng. Electrical Engineering, UTM
Area of Interest: *Power Electronics Converter, Renewable Energy*
wahidahhalim@utem.edu.my
+606-270 2190
A/2-2

DR. AZIAH BINTI KHAMIS
Senior Lecturer
Ph.D. in Electric, Electronics and Systems, UKM.
M.Sc. in Power Distribution Engineering, Newcastle University, UK.
Bachelor Electrical and Electronics Engineering, UPM
Area of Interest: *Intelligent Application of Power System Study, Distributed Generation, Microgrid*
aziah@utem.edu.my
+606-270 2142
B/G-3

DR. MOHD HENDRA BIN HAIRI
Senior Lecturer
Ph.D. in Electrical Engineering, The University of Manchester
M.Eng. in Electrical Engineering, UTM
B.Eng. in Electrical Engineering, USM
Area of Interest: *Power systems (protection)*
hendra@utem.edu.my
+606-270 2133
A/2-22

Ir. DR. MD HAIRUL NIZAM BIN TALIB
Senior Lecturer
Ph.D. in Electrical Engineering, UTeM
M.Sc. Electrical Engineering, University of Nottingham, UK
B.Eng. Electrical Engineering, UTM
Area of Interest: *Power Electronics, Motor Drives and Fuzzy Logic*
hairulnizam@utem.edu.my
+606-270 2189/+60196676223
A/1-6

DR. ZULHANI BIN RASIN
Senior Lecturer
Ph.D. (Electrical Engineering), The University of New South Wales, Australia
M.Eng. in Electrical (Electronics & Communications), UTM
B.Eng. (Electrical Engineering), University of Electro-Communication, Tokyo
Area of Interest: *Photovoltaic inverter, EV drives and energy storage management*
zulhani@utem.edu.my
+606-270 2200
B/2-21

DR. AZZIDDIN BIN MOHAMAD RAZALI
Senior Lecturer
Ph.D. in Electrical Engineering, Memorial University of Newfoundland, Canada.
M.Eng., B.Eng. in Electrical Engineering, UTM
Area of Interest: *Power Electronics, Machine Drives and Power Quality*
azziddin@utem.edu.my
+606-270 2196
A/3-19

DR. KYAIRUL AZMI BIN BAHARIN
Senior Lecturer/Laboratory Coordinator
Ph.D. in Electrical Engineering (Solar Energy Forecasting), UTM
M.Eng. Sc Electrical Engineering (Power Systems) UNSW, Australia
Bachelor of Electrical Engineering (Industrial Power), KUTKM
Area of Interest: *Solar Energy, Grid-Connected Photovoltaics, Smart Grid*
kyairulazmi@utem.edu.my
+606-270 2141
B/2-6

DR. HYREIL ANUAR BIN KASDIRIN
Senior Lecturer /Dirctor Office of Academic Planning & Development
Ph.D. in Control Systems & Artificial Intelligence, University of Sheffield, United Kingdom
M.Sc. in Engineering (Control Systems), The University of Sheffield
B.Eng. (Hons) Electrical Engineering (Communication), UiTM
Area of Interest: *Control Systems and Artificial Intelligence*
hyreil@utem.edu.my
+606-270 2785

Ir. DR. NORAZHAR BIN ABU BAKAR
Senior Lecturer
Ph.D. in Electrical Engineering, Curtin Uni., Australia
M.Sc. (Eng.) in Control Systems, University of Sheffield
B.Eng. (Hons) in Electronic and Electrical Engineering, University of Leeds
Diploma in Electrical Eng. (Power), UiTM
Area of Interest: *Power Transformer, Condition Monitoring, Advance Control System*
norazhar@utem.edu.my
+606-270 2175
A/G-1

DR. NORHAFIZ BIN SALIM
Senior Lecturer
Ph.D. in Power (Renewable Energy), Yokohama National University (YNU), Japan
M.Eng. in Electrical Engineering (Power), UTM
B.Eng. in Electrical Engineering (Power Industry), UTeM
Area of Interest: *Renewable Energy, Power System, Voltage Stability, Frequency Stability*
norhafiz@utem.edu.my
+606-270 2146
B/G-8

DR. NURUL AIN BINTI MOHD SAID
Senior Lecturer
Ph.D. in Electrical Engineering, UNSW, Sydney.
M.Sc. in Electrical Power Engineering with Business, University of Strathclyde, UK
B.Eng. (Electrical Engineering), UTM
Area of Interest: *Power Electronics, Electric Motor Drives*
nurulain@utem.edu.my
+606-270 2207
B/1-5

DR. MOHD ZULKIFLI BIN RAMLI
Senior Lecturer
Ph.D. in Electrical Engineering, UTM
M.Eng. in Electrical Engineering, UTM
B.Eng. in Electrical Engineering (Mechatronics), UTM
Area of Interest: *Power Electronics Converter, Renewable Energy and Power Quality*
mohd.zulkifli@utem.edu.my
+606-270 2199
B/G-2

Ts. DR. MOHAMAD FANI BIN SULAIMA
Deputy Director of Smart Environment Center/Senior Lecturer
Ph.D. in Electrical Engineering (Demand Side Management), Universiti Teknologi MARA (UiTM)
M.Eng. in Engineering (Industrial Electronic & Control), Universiti Malaya (UM)
B.Eng. in Engineering (Electrical & Electronic), Tokai University Japan
Dip. in Technical Japanese (Electrical & Electronic)-Japanese Associate Degree Program (JAD), UNISEL
Area of Interest: *Demand Side Management, Energy Efficiency, Demand Response, Measurement & Verification, Power Distribution Network, Optimization Algorithms, Control & Instrumentation*
fani@utem.edu.my
+606-270 2251
A/3-18

DR. MOHD RUZAINI BIN HASHIM
Senior Lecturer
Ph.D. in Automation, Control and System Engineering, University of Sheffield, UK
M.Sc. (Eng.) Electronic and Electrical Engineering, University of Leeds
Bachelor of Engineering (Hons) Electrical, UiTM
Diploma in Electrical Eng. (Electronic), UiTM
Area of Interest: *Optimization algorithm, Control, Electronic, Automation*
ruzaini@utem.edu.my
+606-270 2174
A/G-3

DR. INTAN AZMIRA BINTI WAN ABDUL RAZAK
Senior Lecturer
Ph.D. in Electric & Electronic Eng. Universiti Tenaga Nasional (UNITEN)
M.Eng. (Electric-Power), UTM
B.Eng. (Electrical Engineering-Industrial Power), KUTKM
Area of Interest: *Power System Planning*
intan.azmira@utem.edu.my
+606-270 2239
A/3-4

DR. EZREEN FARINA BINTI SHAIR
Senior Lecturer
Ph.D. (Electronic Engineering), UPM
M.Eng. (Electrical – Mechatronics and Automatic Control), UTM
B.Eng. (Electrical – Control and Instrumentation), UTM
Area of Interest: *Bio-signal Processing, Machine Learning, Artificial Intelligence, Control System, Instrumentation*
ezreen@utem.edu.my
+606-270 2182
A/1-9

DR. NUR HAKIMAH BINTI AB AZIZ
Senior Lecturer
Ph.D. in Electronics and Electrical Engineering, University of Strathclyde, UK
M.Eng. in Electrical Power Engineering, UniSA, Australia
B.Eng. in Electrical Engineering, UTM
Area of Interest: *Condition Monitoring, Dielectric Ageing, Diagnostics and Prognostics*
hakimah@utem.edu.my
+606-270 2134
A/G-22

Ir. DR. SHARIN BIN AB. GHANI
Senior Lecturer
Ph.D. in Electrical Engineering, Universiti Teknologi Malaysia (UTM)
M.Eng. in Electrical Engineering, Universiti Tenaga Nasional (UNITEN)
B.Eng. (Hons) in Electrical Engineering (Power Electronic and Drive), (UTeM)
Area of Interest: *Condition Monitoring of Power Equipment, High Voltage Engineering, Eco-Friendly Electrical Insulation, Electrical Installation Design, and Design of Experiments*
sharinag@utem.edu.my
+606-270 2203
B/G-10

Ts. DR. MOHD SHAHRIL BIN AHMAD KHIAR
Senior Lecturer
Ph.D. in Electrical and Electronics (High Voltage), University of Southampton, United Kingdom Master of Electrical Engineering, Universiti Tenaga Nasional (UNITEN)
B.Sc. in Electrical Engineering (Electrical and Electronics), Korea University, Korea
Diploma in Electrical System Engineering, Dong Yang Technical College, South Korea
Area of interest: *High Voltage Engineering & Insulation; Condition Monitoring for Power Equipment; Asset Management, Sensors, Design of Experiments*
mohd.shahril@utem.edu.my
+606-270 2147
B/G-17

DR. MUHAMAD KHAIRI BIN ARIPIN
Senior Lecturer
PhD (Electrical Engineering), UTM
M.Sc. in Automation & Control, University of Newcastle upon Tyne
B.Eng. (Electrical – Instrumentation & Control), UTM
Dip. in Electrical Engineering (Power), UTM
Area of Interest: *Vehicle Dynamics Control, Control System Design, Instrumentation & Industrial Automation*
khairiaripin@utem.edu.my
+606-270 2162
B/1-3

Ir. IMRAN BIN SUTAN CHAIRUL
Senior Lecturer
Master of Electrical Engineering, Universiti Tenaga Nasional (UNITEN).
B.Eng. (Hons) in Electrical Engineering (Industrial Power), UTeM
Area of Interest: *Vegetable-based Transformer Dielectric Liquids, Transformer Diagnostics and Condition Monitoring, Renewable Energy*
imransc@utem.edu.my
+606-270 2206
B/G-9

MOHAMAD RIDUWAN BIN MD NAWAWI
Senior Lecturer
M.Sc. in Advanced Control and System Engineering, University of Manchester, UK
B.Eng. (Hons) Electronic Engineering, University of Surrey, UK
Area of Interest: *Control System Engineering, Nonlinear System, Process Control*
riduwan@utem.edu.my
+606-270 2176
B/3-4

DR. ARFAH BINTI AHMAD
Lecturer
Ph.D. (Electrical Engineering and Computer Science), UWA, Australia
M.Sc. (Statistics), UKM
B.Sc. (Statistics), UKM
Area of Interest: *Statistical Data Analysis, Statistical Modelling and Forecasting, Data compression, Survey & Sampling*
arfah@utem.edu.my
+606-270 2238
B/1-16

SITI AZURA BINTI AHMAD TARUSAN
Lecturer
M.Eng. in Engineering (Industrial Electronic & Control), Universiti Malaya (UM)
B.Eng. (Electrical Engineering), Universiti Teknologi Malaysia (UTM)
Area of Interest: *Power Electronics & Drives*
sitiazura@utem.edu.my
+606-270 2208
B/1-15

NUR ASMIZA BINTI SELAMAT
Lecturer
M.Eng. (Electrical-Mechatronics & Automatic Control), UTM
Bachelor of Engineering (Electrical), UTM
Area of Interest: *Control system engineering, Modeling, Optimization technique*
nurasmiza@utem.edu.my
+606-270 2179
A/G-16

NUR HAZAHSHA BINTI SHAMSUDIN
Senior Lecturer
M.Eng. in Engineering (Electrical Energy and Power System), UM
B.Eng. in Electrical Engineering (Power), UiTM
Dip. In Electrical Engineering (Communication) UiTM
Area of Interest: *Distribution System Optimization and Power Quality*
nurhazahsha@utem.edu.my
+606-270 2152
A/1-1

DEPARTMENT OF MECHATRONICS ENGINEERING
ACADEMIC

DR. AINAIN NUR BINTI HANAFI
Head of Department / Senior Lecturer
Ph.D. in Electrical Engineering, University of Newcastle, Australia
M.Sc. in Control System, University of Sheffield
B.Eng. (Electrical Engineering), Universiti Teknologi MARA
Area of Interest: *Control systems, nonlinear systems, fault tolerant control*
ainain@utem.edu.my
+606-270 2165
A/1-4

ASSOCIATE PROF. Ts. DR. MUHAMMAD FAHMI BIN MISKON
Associate Professor
Ph.D. in Electrical and Computer Engineering (Robotics), Monash University, Australia
M.Sc. in Electrical Engineering (Mechatronics) University of Newcastle, UK
B.Eng. in Electrical Engineering (Mechatronics), UTM
Area of Interest: *Wearable robots, Artificial intelligence*
fahmimiskon@utem.edu.my
+606-270 1545
B/2-4

ASSOCIATE PROF. Ir. DR. AHMAD ZAKI BIN SHUKOR
Coordinator of Postgraduate Studies/ Associate Professor
Ph.D. (Robotics and Motion Control), Yokohama National University, Japan
M.Eng. (Electrical Power Engineering) University of South Australia, Adelaide
B.Eng. (Electrical-Mechatronics Engineering), UTM
Area of Interest: *Embedded Control Design & Application, Mobile Robots*
zaki@utem.edu.my
+606-270 2211
B/2-24

ASSOCIATE PROF. DR. MUHAMMAD HERMAN BIN JAMALUDDIN
Associate Professor
Doctor of Engineering (Haptics), Yokohama National University, Japan
M.Sc. in Electrical Engineering (Mechatronics System), UTeM
B.Eng. in Electrical Engineering (Mechatronics), UTM
Area of Interest: *Haptics, Mechatronics, Embedded System, Robotic, Electronics, Information & Communication Technology (ICT) Design & Application*
herman@utem.edu.my
+606-270 2213
B/1-4

ASSOCIATE PROF. DR. MARIAM BINTI MD. GHAZALY
Deputy Director of CAES/ Associate Professor
D.Eng. & M.Eng. (Mechano-Micro Engineering), Tokyo Institute of Technology, Japan
M.Eng. (Electrical-Mechatronics and Automatic Control Engineering), UTM
B.Eng. in Electrical Engineering, UTM
Area of Interest: *Precision Motion Systems, Control System, Actuator Design*
mariam@utem.edu.my
+606-270 2216
A/2-6

ASSOCIATE PROF. DR. CHONG SHIN HORNG
Associate Professor
Ph.D. in Mechano-Micro Engineering (Precision & Control Engineering), Tokyo Institute of Technology, Japan
M.Eng. in Electrical Engineering, UTM
B.Eng. in Electrical Engineering (Instrumentation & Automation), UTM
Area of Interest: *Motion Control, Mechatronics Application, Precision Engineering*
horng@utem.edu.my
+606-270 2159
A/2-21

ASSOCIATE PROF. DR. AHMAD ANAS BIN YUSOF
Associate Professor
Ph.D. in Mechanical and Civil Engineering, Gifu University, Japan
M.Eng. in Mechanical, Universiti Teknologi Malaysia
B.Eng. in Mechanical, Universiti Teknologi Malaysia
Area of Interest: *Robotics, Mechatronics, Thermal-Fluids*
anas@utem.edu.my
+606-270 4356
B/3-1

Ir. DR. FARIZ BIN ALI @ IBRAHIM
Senior Lecturer
Ph.D. (Robotics) in Yokohama National University, Japan
M.Eng. (Electrical Engineering), University of South Australia, Adelaide, Australia
B.Eng. (Electrical Engineering-Mechatronics) UTM
Area of Interest: *Robotics, Humanoid*
fariz@utem.edu.my
+606-270 2212
B/2-2

Ir. DR. ZAMANI MD SANI
Senior Lecturer
Ph.D. Engineering, Multimedia University, Malaysia
M.Sc. Electrical & Electronics Engineering (Real- Time Vision System), USM
B.Eng. (Electrical & Electronics Engineering), USM
Area of Interest: *Image Processing and Artificial Intelligence*
zamanisani@utem.edu.my
+606-270 2232
A/3-16

DR. MOHD RUSDY BIN YAACOB
Coordinator Industry & Community CollaborationCenter/ Senior Lecturer
Ph.D. in Mechanical Engineering, Technical University of Denmark, Denmark
M.Sc. in Mechatronics Engineering, University of Siegen, Germany
B.Eng. (Hons) in Mechatronics Engineering, IIUM
Area of Interest: Experimental Fluid Mechanics, Fluid Power
rusdy@utem.edu.my
+606-270 2222

Coordinator Smart Environment Centre (Censei)/ Senior Lecturer
Ph.D. in Electrical Engineering, Universiti Malaya (UM)
M.Eng. Industrial Electronic & Control, Universiti Malaya (UM)
B.Eng. (Electrical), Universiti Teknologi MARA (UiTM)
Area of Interest: *Optical sensor, Optoelectronics, Nanophotonics & Instrumentation*
mohd.hafiz@utem.edu.my
+606-270 2243/+60122641770
B/3-9

Ts. DR. MOHAMAD FAIZAL BIN BAHAROM
Senior Lecturer
Ph.D. in Electrical Engineering, Universiti Malaya (UM)
M.Eng. in Electrical Engineering Universiti Teknologi Malaysia (UTM)
B.Eng. in Electrical Engineering (Power Industrial), UTeM
Area of Interest: *Fibre Optic Laser, Energy Efficiency, Green Buildings*
mohamad.faizal@utem.edu.my
+606-270 2151/+60139866632
B/2-15

DR. AHMAD AIZAN BIN ZULKEFLE
Senior Lecturer
Phd. in Renewable Energy, Universiti Kebangsaan Malaysia (UKM)
M.Sc. in Electrical Engineering & Power Electronics, University of Bradford, United Kingdom
B.Eng. in Electrical Engineering, Universiti Teknologi Malaysia (UTM)
Diploma in Electrical Power, Universiti Teknologi Malaysia (UTM)
Area of Interest: *Fabrication and Characterization of Thin Film Solar Cell*
aizan@utem.edu.my
+606-2702196
B/3-2

DR. NOR HIDAYAH BINTI RAHIM
Senior Lecturer
Ph.D. in Electrical Engineering, Universiti Teknologi Malaysia (UTM)
Master of Electrical Engineering, Universiti Tenaga Nasional (UNITEN)
B.Eng. in Electrical Engineering, Universiti Teknologi Malaysia (UTM)
Area of Interest: *High Voltage Engineering, Dielectric Materials*
hidayah.rahim@utem.edu.my
+606-270 2148
B/3-15

DR. NUR ZAWANI BINTI SAHARUDDIN
Senior Lecturer
Ph.D. in Electrical Engineering (Power System Islanding), Universiti Tenaga Nasional (UNITEN)
M.Eng. in Electrical Engineering (Electrical Energy and Power System), Universiti Malaya (UM)
B.Eng. in Electrical Engineering (Industrial Power), UTeM
Diploma in Electrical Engineering, UTeM
Area of interest: *Power System Islanding, Distribution system and Fault Analysis*
nurzawani@utem.edu.my
+606-2702149
A/1-8

Ir. ALIAS BIN KHAMIS
Senior Lecturer
M.Sc. in Electrical Engineering, Universiti Putra Malaysia (UPM)
B.Eng. in Electrical Engineering, Universiti Teknologi MARA (UiTM)
Area of Interest: *Electrical Power Engineering, Energy Utilization and Conservation*
alias@utem.edu.my
+606-2702135/+60173766059
A/G-2

IRMA WANI BINTI JAMALUDIN
Senior Lecturer
M.Sc. (Mathematics), UTM
B.Sc. (Industrial Mathematics), UTM
Area of Interest: *Algebra and Analysis, Applied Mathematics*
irma@utem.edu.my
+606-2702218
A/G-5

MUSA BIN YUSUP LADA
Senior Lecturer
M.Sc. in Electrical Engineering, Universiti Teknikal Malaysia Melaka (UTeM)
B.Eng. (Hons) in Electrical Engineering (Power Electronic & Drives), Universiti Teknikal Malaysia Melaka (UTeM)
Area of Interest: *Power Electronics Converter, Active Power Filter, Renewable Energy*
musayl@utem.edu.my
+606-270 2292
B/3-5

DR. AINE IZZATI BINTI TARMIZI
Lecturer
Ph.D. in Electronic and Electrical Engineering, University of Southampton
M.Sc. in Electrical and Electronic Engineering, University of Strathclyde
B.Eng. in Electrical Engineering, Universiti Teknologi Malaysia (UTM)
Area of interest: *EMC in Substation and Smart Grid, Lightning*
aineizzati@utem.edu.my
+606-270 2154
A/3-8

MOHD FAIRUS BIN ABDOLLAH
Lecturer
M.Eng. in (Electrical-Mechatronics and Automatic Control), Universiti Teknologi Malaysia (UTM)
B.Eng. in Electrical, Universiti Teknologi Malaysia (UTM)
Area of Interest: *Control & Instrumentation*
mfairus@utem.edu.my
+606-2702167
B/G-21

ANIS NIZA BINTI RAMANI
Lecturer
M.Eng. in Electrical Engineering (Power), Universiti Teknologi Malaysia (UTM)
B.Eng. in Electrical Engineering (Power Industrial), UTeM
Area of Interest: *Power System, High Voltage and Grounding*
anisniza@utem.edu.my
+606-2702140
A/2-10

MOHD SAIFUZAM BIN JAMRI
Lecturer
M.Eng. in Electrical Engineering (Power), Universiti Teknologi Malaysia (UTM)
B.Eng. (Hons) in Electrical Engineering, UTeM
Area of Interest: *Power Electronics & Drives*
saifuzam@utem.edu.my
+606-270 2201
A/2-17

NORHASLINDA BINTI HASIM
Lecturer
M.Eng. (Electrical – Mechatronics and Automatic Control), Universiti Teknologi Malaysia (UTM)
B.Eng. in Electrical Engineering, Universiti Teknologi MARA (UiTM)
Area of Interest: *Motion Control & Precision Engineering*
norhaslinda@utem.edu.my
+606-270 2170
B/G-19

ARFAH SYAHIDA BINTI MOHD NOR
Lecturer
M.Eng. in Electrical (Mechatronics and Automation Control), Universiti Teknologi Malaysia (UTM)
B.Eng. in Electrical (Instrumentation and Control), Universiti Teknologi Malaysia (UTM)
Area of Interest: *Control System and Instrumentation*
arfahsyahida@utem.edu.my
+606-270 2181
B/3-8

ATIKAH BINTI RAZI
Lecturer
M.Eng. in Electrical Engineering (Industrial Electronics & Control), Universiti Malaya (UM)
B.Eng. in Electrical Engineering (Power), Universiti Teknologi Malaysia, (UTM)
Area of interest: *Micro-inverter, Solar PV Inverter, Off-grid PV*
atikah@utem.edu.my
+606-270 2244/+60193337929
A/2-8

SYAHAR AZALIA BINTI AB SHUKOR
Lecturer
M.Eng. in Electrical Engineering (Power), Universiti Teknologi Malaysia (UTM)
B.Eng. (Hons) in Electrical Engineering (Power Electronics & Drives), UTeM
Dip. in Electrical Engineering, UTeM
Area of Interest: *Power Electronics Application, Renewable Energy System*
syaharazalia@utem.edu.my
+606-270 2241
B/G-1

NUR RAFIQAH BINTI ABDUL RAZIF
Lecturer
M.Sc. in Mathematics, Universiti Teknologi Malaysia (UTM)
BSc in Industrial Mathematics, Universiti Teknologi Malaysia (UTM)
Area of Interest: *Data Forecasting, Time Series Analysis*
nurrafiqah@utem.edu.my
+606-270 2246
A/G-17

NORHAZILINA BINTI BAHARI
Lecturer
M.Eng. in Electrical Engineering (Power), Universiti Teknologi Malaysia (UTM)
B.Eng. (Hons) in Electrical Engineering, UTeM
Diploma in Electrical Engineering (Communication), Universiti Teknologi Malaysia (UTM)
Area of Interest*: Renewable Energy, Power Electronics & Motor Drives*
hazilina@utem.edu.my
+606-270 2202
A/G-9

MASHITAH BINTI CHE RAZALI
Lecturer
M.Eng. in Electrical Engineering, Universiti Teknologi Malaysia (UTM)
B.Eng. in Electrical (Instrumentation and Control), Universiti Teknologi Malaysia (UTM)
Area of Interest: *Process Control, Control Design and Applications*
mashitah@utem.edu.my
+606-270 2247
A/1-15

STUDY LEAVE

Ir. MOHD KHAIRI BIN MOHD ZAMBRI
Senior Lecturer
M.Eng. in Electrical Engineering (Electrical Energy and Power System), Universiti Malaya (UM)
B.Eng. in Electrical Engineering (Industrial Power), UTeM
Area of Interest*: Power system engineering (transient analysis & power quality)*
khairi_z@utem.edu.my
+606-270 2163
B/3-16

NURLIYANA BINTI BAHARIN
Lecturer
M.Eng. In Electrical Engineering, Universiti Tenaga Nasional (UNITEN)
B.Eng. in Electrical, Universiti Teknologi Malaysia (UTM)
Area of Interest: *Power System, High Voltage*
liyana@utem.edu.my
+606-270 2245
A/1-10

TECHNICAL

SUBKI BIN MAT KAHAR
Senior Assistant Engineer
subki@utem.edu.my
+606-270 2194
Advanced Digital Signal Processing Research Lab
Makmal Mesin Elektrik 1
Makmal Elektrik & Elektronik 2

MOHD ARIF BIN MOHD NOR
Senior Assistant Engineer
arif@utem.edu.my
+606-270 2214
Underwater Technology Research Lab
Bengkel Mekatronik
Makmal Sistem Perlindungan

AHAMAD FUAD BIN JAAPAR
Assistant Engineer
fuad@utem.edu.my
+606-270 2193
Makmal Teknologi Elektrik
Bilik Pasca Siswazah 1 & 2

MOHD FIRDAUS BIN GHAZALI
Assistant Engineer
mfirdaus@utem.edu.my
+606-270 2138
Robotics and Industrial Automation Research Lab
Bengkel Kuasa Industri

MOHD YUSRI BIN JAMIL
Senior Assistant Engineer
yusri@utem.edu.my
+606-270 2252/+60196239973
Solar PV System and Smart Grid Research Lab
Makmal Sistem Kuasa 2

MOHD SYAKRANI BIN AKHBAR
Senior Assistant Engineer
syakrani@utem.edu.my
+606-270 2118
Makmal Pneumatik & Hidraulik
Makmal Kecekapan Tenaga

SAHRIL BIN BAHAR
Assistant Engineer
sahril@utem.edu.my
+606-270 2195
Electric Vehicle Drives Research Lab
Makmal Sistem Kuasa 1

MOHD FADHIL BIN IBRAHIM
Assistant Engineer
mohdfadhil@utem.edu.my
+606-270 2204
Power Electronic and Drives Research Lab
Makmal Elektronik Kuasa

AZLIANI BINTI MD NGARI
Assistant Engineer
azliani@utem.edu.my
+606-270 2168
Makmal Sistem Kawalan
Motion Control Research Lab

SYED ALIF BIN SYED ARIFFIN
Assistant Engineer
aliff@utem.edu.my
+606-270 2205
Rehabilitation Engineering and Assistive Technology (REAT)
Makmal Elektrik & Elektronik 1

NORLIAH BINTI MAHAT
Assistant Engineer
norliahmahat@utem.edu.my
+606-270 2225
Makmal Robotik & Automasi
Makmal Simulasi Elektronik Kuasa

SITI FATIMAH BT KAMARUDIN
Assistant Engineer
sitifatimah@utem.edu.my
+606-270 2169
Makmal Simulasi CIA
Bengkel CIA & Mekatronik

ABD RAHIM BIN BABA
Assistant Engineer
abdrahim@utem.edu.my
+606-270 2129
Electrical Machine Design Research Lab
Makmal Aplikasi Elektronik Kuasa

MOHD WAHYUDI BIN MD HUSSAIN
Assistant Engineer
wahyudi@utem.edu.my
+606-270 2155
High Voltage Engineering Research Laboratory
Makmal Mesin Elektrik 2

MOHD HELMAN BIN ABD. RAHMAN
Assisteant Engineer
helman@utem.edu.my
+606-270 2224
Makmal Mikropemproses

MOHD FAUZI BIN ROSLAN
Assistant Engineer
fauziroslan@utem.edu.my
+606-270 2226
Makmal Instrumentasi & DSP
Makmal Sistem Mekatronik

NORHISHAM BIN ABU SEMAN
Assistant Engineer
norhisham@utem.edu.my
+606-270 2157
Energy and Power System Research Lab
Makmal PLC & Kawalan Proses

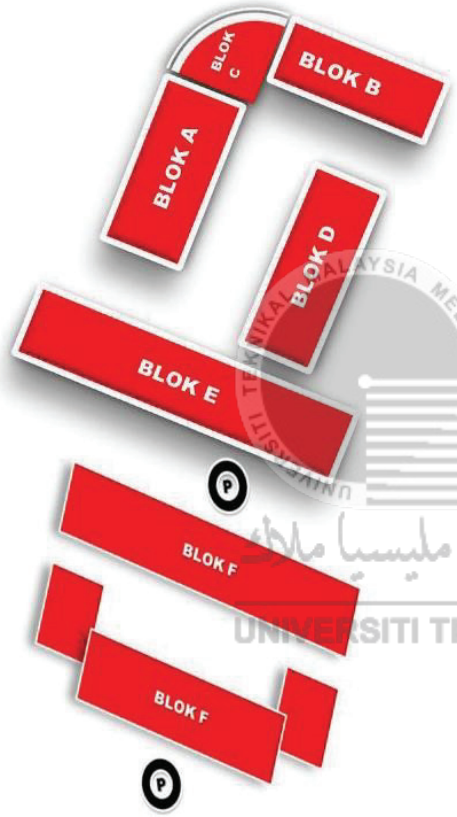
FKE'S BUILDING MAP



BLOCK A

Ground Floor	Lecturers' rooms, Lecture Room 2
1st Floor	Ladies prayer room, Lecturer rooms, Seminar room
2nd & 3rd Floor	Lecturer rooms

BLOCK B

Ground Floor	Lecturers' rooms, Lecture Room 1
1st Floor	Lecturers' rooms, Discussion Room 1 & 2
2nd Floor	Lecturers' rooms, Discussion room 4 & 5
3rd Floor	Lecturers' rooms

BLOCK C

Ground Floor	Faculty lobby, Lecturers' rooms
1st Floor	Faculty administration office, Dean, Deputy Dean/Head of Department
2nd Floor	FKE meeting room, ISO files room, waiting room.
3rd Floor	Lecturers' rooms.

BLOCK D

Ground Floor	Power electronic and drive lab.
1st Floor	Robotic and industry automation research lab, Mechatronics and CIA lab.
2nd Floor	Electrical Technology lab 1, Post graduate room 1

BLOCK E

Ground Floor	Power systems Labs 1 & 2, Pneumatic and hydraulic Lab, Power electronic lab, Lecture Rooms 3 & 8, Students prayer room(male).
1st Floor	Power electronic and drive lab research room, Post graduate room 2, Final year project room, Lecture Rooms 4, 9 & 10, Students prayer room (female), CIA simulation lab, Energy Efficiency lab.
2nd Floor	Power electronic applications lab, Power electronic simulation lab, Lecture rooms 5 ,10 & 12 Mechatronics system lab, Control systemlab.
3rd Floor	Energy and power system lab, Lecture Rooms 6 ,13 & 14, Briefing room 7, PLC & Process control lab, Robotic and automation lab.

BLOCK F

Ground Floor	Power industry workshop, Engineering practices workshop, Electrical machine labs 1 & 2, High voltage lab, Generation and transmission lab, Protection system lab, Machine drive lab.
2nd Floor	Electrical & Electronic Labs 1 & 2, Lecture Room 15 & 16.
3rd Floor	Microprocessor Lab, Instrumentation and DSP Lab, Motion Control Research Lab.

LIST OF LABORATORIES

TEACHING AND LEARNING LABORATORIES (UNDERGRADUATE)

NO	LABORATORY / WORKSHOP NAME	ROOM NO.	EQUIPMENTS
1	Power System Laboratory 1	ME1 (E/G-2)	TERCO Transmission System Training Set, TERCO Power Utilization System Training Set
2	Power System Laboratory 2	ME2 (E/G-7)	TERCO Generation System Training Set
3	Energy Efficiency Laboratory	ME3 (E/1-19)	Various tools & equipment of energy efficiency studies
4	Protection System Laboratory	ME4 (F/G-27)	LABVOLT Protection System Training Set, PC
5	Electrical & Electronic Laboratory 1	ME5 (F/2–4)	PCs, Function Generators, Oscilloscopes, Digital Lab Trainers, Multimeters
6	Electrical & Electronic Laboratory 2	ME6 (F/2–15)	PCs, Function Generators, Oscilloscopes, Digital Lab Trainers, Multimeters
7	Electrical Technology Laboratory 1	ME7 (D/2–11)	LABVOLT meters, loads, tools & equipments for electrical technology studies
8	Control, Instrumentation & Automation (CIA) Simulation Laboratory	ME12 (E/1–14)	PC c/w Matlab & Multisim, Micro-Box
9	PLC & Process Control Laboratory	ME13 (E/3–13)	OMRON PLC Training Set, Test Panel DOL Motor Starter, Test Panel STAR-DELTA Motor Starter and various equipments of automation
10	Microprocessor Laboratory	ME14 (F/3–8)	PCs, Oscilloscopes, Multitester, Mechatronics project kit, PIC Training Kit
11	Instrumentation and DSP Laboratory	ME15 (F/3–5)	LORENZO CBT Modul, Multimeters, function generators, digital lab trainer, analog oscilloscope, magnaprobe, Galvanometer, Decade resistor, Decade Inductor

Power System Lab 2

Electrical Technology Lab

12	Control System Laboratory	ME11 (E/2-21)	Modular Servo System, Mathlab software, Digital Oscilloscope.
13	Robotic and Automation Laboratory	ME17 (E/ 3-18)	Rhino robot trainer, Scara robot trainer, etc,
14	Pneumatic and Hydraulic Laboratory	ME18 (E/G-15)	BOSCH REXROTH Pneumatic & Hydraulic System Training Set
15	Power Electronic Laboratory	ME19 (E/G–20)	PCs, oscilloscope digital Tektronix and various equipments for power electronics studies, Power Electronics training system model labvolt
16	Power Electronic Simulation Laboratory	ME20 (E/2–7)	PCs & LabView software
17	Power Electronic Applications Laboratory	ME21 (E/2–2)	PCs, ERACS & PSCAD software
18	Electrical Machine Laboratory 1	ME22 (F/G–14)	LORENZO electrical machines
19	Electrical Machine Laboratory 2	ME23 (F/G-11)	Dissectible machine
20	Power Electronic Workshop	BE25 (F/G–4)	Wiring bays, tools and equipments for domestic & motor control/starter wiring
21	Mechatronics and CIA Workshop	BE26 (D/1-10B)	CIM System, AGV, CNC machine, OMRON machine vision, robot arm training set
22	Engineering Workshop/ CERIA Lab	ME27 (F/G-6)	Hitachi bench drill, welding set, grander, break cutter, pallet jack, spanner Canady
23	Components Store	D/G-11	Electronics Components
24	Mechatronics System Laboratory	ME29 (F/3-2)	PCB machine

RESEARCH LABORATORIES (POSTGRADUATE)

NO	LABORATORY NAME	ROOM NO.	RESEARCH FIELD
1	Robotics & Industrial Automation Research Laboratory	ME27 (F/G – 6)	Assistive/ rehabilitatio robotics Mobile robot navigation Artificial Intelligence
2	Motion Control Research Laboratory	ME16 (E/2–16)	Precision Motion Control Control Theory Precision Actuator Design Robotics, Biped Robot
3	Underwater Technology Research Laboratory	ME9 (F/G–22)	Remotely Operated Vehicle Surface Vessel System Underwater Sensory Technology
4	Power Electronics and Drives Research Laboratory	MP2 (E/1 -3)	Direct Torque Control of Induction/PM machines. Multilevel/Multiphase Inverters. Power Converters for Battery Management Sys. & PV Applications
5	Electrical Machine Design Research Laboratory	D / G - 11	Permanent magnet machine: Designs and Applications Switched Reluctance and Bearingless motor. Condition Monitoring of Electric Machines.
6	Electric Vehicle Drives Research Laboratory	BPS2 (E/1-4)	Sensorles PMSM Drives Electric Vehicle Drives using Dual-motor Control Five-Leg Inverter for Dual-machine Drives
7	Solar PV System and Smart Grid Research Laboratory	D / G - 11	Solar PV System Design & Evaluation Cost and Benefits of PV System Integration Smart Grid Application
8	Energy and Power System Research Laboratory	MP3 (E/3-2)	▪ Optimization of electricity system ▪ Energy Efficiency ▪ Power System Planning and Operation
9	High Voltage Research Laboratory	ME10 (F/G-18)	▪ Breakdown in gases ▪ Surface discharge ▪ Atmospheric discharges &insulation
10	Advanced Digital Signal Processing Research Laboratory	ME24 (F/G-30)	▪ Neural feedback ▪ Brain computer interface ▪ Computer vision, graphics & visualization
11	Rehabilitation Eng. & Assistive Technology Research Laboratory	F/2-9	▪ Biomedical engineering ▪ Biomechanics ▪ Computational and information

CERIA Workshop

Machine Drive Lab

APPENDIX B: STUDENT AUDIT FORM - BEKG PROGRAM

INSTRUCTIONS TO STUDENTS (COMPULSARY FOR EACH SEMESTER)

Instructions for the student :	1. Fill in the **YELLOW HIGHLIGHTED SPACES** - your details and grade obtained for each subjects up the current. 2. Fill in "EXEMPTED" for credit exempted subjects, "PASS" or "FAIL" for BEKU3695 INDUSTRIAL TRAINING and BLHC 4032 CRITICAL AND CREATIVE THINKING and left "INSERT GRADE" for subjects not yet taken. 3. Return the completed form to your academic advisor.
Instructions for the academic advisor :	1. Double confirm the information trough the SMP system (Maklumat Kohort Pelajar). 2. Report the results/highlights any problem in regards to the audit to the program owner (HOD/TDA).

APPENDIX C: STUDENT AUDIT FORM - BEKM PROGRAM

INSTRUCTIONS TO STUDENTS (COMPULSARY FOR EACH SEMESTER)

Instructions for the student :	1. Fill in the **YELLOW HIGHLIGHTED SPACES** - your details and grade obtained for each subjects up the current. 2. Fill in "EXEMPTED" for credit exempted subjects, "PASS" or "FAIL" for BEKU3695 INDUSTRIAL TRAINING and BLHC 4032 CRITICAL AND CREATIVE THINKING and left "INSERT GRADE" for subjects not yet taken. 3. Return the completed form to your academic advisor.
Instructions for the academic advisor :	1. Double confirm the information through the SMP system (Maklumat Kohort Pelajar). 2. Report the results/highlights any problem in regards to the audit to the program owner (HOD/TDA).

PO ATTAINMENT CALCULATION

PO ATTAINMENT

The Program Outcomes (PO) are the qualities that must be attained in the graduates by the time of completion of their program. At the end of each semester, the PO attainment by cohort is calculated to see the current performance of the cohort. At the end of the program, the accumulated PO attainment of all curriculum components is assessed to see the overall performance of the cohort. The indicator of each PO attainment for all programs in FKE is defined by more than 60% of the students get above 50% of allocation marks in the assessment.

Calculation method of PO attainment: Weighted Average Method

Let $j, j \in \{1,2,\cdots,12\}$ represents number of POs and t defines the cohort of the FKE students. The PO_j^t attainment is calculated by

$$PO_j^t = \frac{\sum_{i=1}^{N_j} w_i c_i p_{i,j}}{\sum_{i=1}^{N_j} w_i c_i}$$

where N_j is the total number of courses mapping to the PO_j^t, $p_{i,j}$ is a percentage of course i for each PO attainment, $i \in \{1,2,\cdots,N_j\}$, w_i represents a weightage component of PO_i^t and c_k denotes the credit hour for course k.

EXAMPLE: PO1 CALCULATION OF COHORT X

COURSE	PERCENTAGE, p_i	WEIGHTAGE, w_i	CREDIT, c_i	Formula
A	67.46	1	3	$N_1 = n = 8$ $PO1 = \frac{\sum_{i=1}^{n} w_i c_i p_i}{\sum_{i=1}^{n} w_i c_i}$ $PO1 = \frac{(67.46 \times 1 \times 3) + (67.46 \times 1 \times 3) \ldots + (67.46 \times 1 \times 3)}{(1 \times 3) + (0.5 \times 2) \ldots + (0.75 \times 3)}$ $PO1 = 67.70\%$
B	70.06	0.5	2	
C	98.06	1	3	
D	83.43	0.2	3	
E	20.45	0.5	3	
F	34.25	0.25	3	
G	100	0.4	1	
H	59.2	0.75	3
