CONTENTS

8.4 LABORATORY TECHNICAL STAFF

ACKNOWLEDGEMENT

FOREWORD BY THE DEAN

In the name of Allah, Most Beneficial, Most Merciful
Assalammualaikum and Salam Sejahtera,

First and foremost, I would like to welcome all new students to the Faculty of Mechanical Engineering (FKM), Universiti Teknikal Malaysia Melaka (UTeM). Congratulations on being enrolled on our engineering programmes. You have made the right decision to prepare you to be a skilled and competent engineer with commendable leadership qualities.

The objective of this academic handbook is to be a reference for students to understand and get to know the faculty and the programmes offered at FKM. Thus, students are exposed to the world of knowledge, competency, and skills blended together to develop their self-esteem in philosophy, creativity, and critical thinking and strengthen their commitments in serving the country. It is also aimed to equip students to be well-prepared in facing real-world challenges to survive in their future careers. Therefore, we are looking forward to producing Agile, Superior, Adaptive and Holistic graduates, more commonly known as "*Tangkas, Unggul, Adaptif dan Holistik* (TUAH)" herein UTeM.

In the context of professional graduates, our faculty provides various facilities for students in developing their skills and self-competency. For example, *Research Power House* aims to educate and instil research practices that will prepare our graduates to pursue further studies at the postgraduate level. Furthermore, our continuous effort in preparing a series of demand-driven laboratories to serve our partners from both the industry and agencies is another step forward in creating a dynamic R&D environment at FKM, in line with the national policy towards supporting the IR4.0 ecosystem. In addition, FKM also provides courses and vocational competency

certificates to prepare students as work-ready graduates who will be the expert group for the workforce.

Since 2020, the COVID-19 virus has turned the world and our country in crisis. As a result of this pandemic, the implementation of teaching and learning (T&L) must be done entirely online and hybrid over the past few semesters. As a result, there have been several changes in the implementation of lectures, laboratory training, and practical works and examinations. However, this implementation is subject to the EAC guidelines and may change from time to time. Therefore, we hope that lecturers and students are always ready and resilient in facing any changes and implementation of T&L during the study period.

The COVID-19 pandemic has caused direct impacts, particularly on the country's economic sector and, in our context, the higher education sector. Therefore, various initiatives have been undertaken by the Ministry of Higher Education (MOHE) and the university management. The teaching and learning process is done online to ensure that academic sessions continue without delay and the main goals of holistic and inclusive learning are achieved.

Undoubtedly it is not easy for graduates to adapt to new norms, which turns out to be challenging. In reality, among the main challenges faced by students are poor internet access at home, especially for those living in rural areas, personal issues such as the dilemma between giving total commitment to online learning vs. financial struggles faced in many households thus demanding the students to either help their family with household chores or find part-time jobs to survive. For some, the inability to access online T&L is due to unavailability of smartphones and devices. This have also been their primary concern due to poor financial wellbeing. In FKM and UTeM, we are working on ways to tackle these issues prudently and are continuously taking proactive measures to ensure that no student is left behind throughout their studies, especially during this challenging time where the whole nation and worldwide is fighting in a war against the pandemic.

Hence, I strongly hope that this academic handbook will benefit our students as a helpful guide throughout their studies at FKM and UTeM. Lastly, I would like to wish all our upcoming and current students all the best to embark on this faculty journey.

"FKM - GEARED FOR EXCELLENCE"

Thank you.

Dr. Ruztamreen Bin Jenal
Dean
Faculty of Mechanical Engineering

1 BACKGROUND OF UTeM

1.1 History

On December 1st, 2000, the Ministry of Education of Malaysia has officially approved the establishment of a new public university in the name of Kolej Universiti Teknikal Kebangsaan Malaysia (KUTKM). The establishment of KUTKM is to fulfil the needs of prospective industries on professional manpower in technical areas that not only have sound academic ability, but also competent and highly technical skilled. As the 14th public higher learning institution established in Malaysia, KUTKM has experienced many challenges and impediments in order to be a renowned university. KUTKM supports application-oriented approach and practice in its Teaching and Learning (T&L) processes.

On February 1st, 2007, KUTKM has been renamed and presently known as the Universiti Teknikal Malaysia Melaka (UTeM). From the beginning of the establishment, UTeM has upheld and maintained technical education programmes which fulfil the needs of current industries and tech-based employers. The students of UTeM come from diverse backgrounds which include science, technical and vocational streams.

1.2 Vision, Mission, Motto and Educational Goals

The vision, mission, motto and educational goals of UTeM are as follows:

1.2.1 Vision

To Be One of the World's Leading Innovative and Creative Technical Universities

1.2.2 Mission

UTeM is determined to lead and contribute to the wellbeing of the country and the world by:

a. Promoting knowledge through innovative teaching & learning, research and technical scholarship;
b. Developing professional leaders with impeccable moral values;
c. Generating sustainable development through smart partnership with the community and industry."

1.2.3 Motto

Excellence Through Competency

1.2.4 Educational Goals

a. To conduct academic and professional programmes based on relevant needs of the industries.
b. To produce graduates with relevant knowledge, technical competency, soft skills, social responsibility and accountability.
c. To cultivate scientific method, critical thinking, creative and innovative problem solving and autonomy in decision making amongst graduates.
d. To foster development and innovation activities in collaboration with industries for the prosperity of the Nation.
e. To equip graduates with leadership and teamwork skills as well as develop communication and life-long learning skills.
f. To develop technopreneurship and managerial skills amongst graduates.
g. To instill an appreciation of the arts and cultural values and awareness of healthy life styles amongst graduates.

1.3 Location

From 2001 to 2005, UTeM, which was then known as KUTKM, was located in renovated shophouses in Taman Tasik Utama, Ayer Keroh. These renovated shophouses consist of the university administrative offices, lecture halls, laboratories, staff rooms along with student accommodation.

On June 10th, 2001, KUTKM began offering academic programmes with pioneer student intake of 348 students. At present, UTeM has eight faculties and one post graduate (PG) centre that offer programmes at Diploma, Bachelor Degree or PG levels. The faculties are:

a. Faculty of Mechanical Engineering (FKM)
b. Faculty of Electronics & Computer Engineering (FKEKK)
c. Faculty of Electrical Engineering (FKE)
d. Faculty of Manufacturing Engineering (FKP)
e. Faculty of Information & Communication Technology (FTMK)
f. Faculty of Technology Management & Technopreneurship (FPTT)
g. Faculty of Mechanical & Manufacturing Engineering Technology (FTKMP)
h. Faculty of Electrical & Electronic Engineering Technology (FTKEE)
i. Centre of Graduate Studies (PPS)

UTeM has 2 campuses, which are the Main Campus at Durian Tunggal and Technology Campus at Ayer Keroh.

1.3.1 Main Campus

The Main Campus is located at the Mukim Durian Tunggal, Melaka on a piece of land that has been developed since 2001. The Faculty of Electronics & Computer Engineering and the Faculty of Electrical Engineering have commenced their operations at the Main Campus since 2005. In 2009 another three faculties, namely the Faculty of Mechanical Engineering, the Faculty of Manufacturing Engineering and the Faculty of Information & Communication Technology, started operating in the main campus. However, in 2011, Faculty of Mechanical Engineering was relocated at the Technology Campus, Ayer Keroh. In addition, Institute of Technology Management & Entrepreneurship (IPTK), Centre for Languages and Human Development (PBPI), the Sports Complex, the Student Activity Centre and students' cafeteria are completed and utilized. Sports grounds such as fields for football, hockey, tennis and various other sports facilities are also available at the Main Campus. The university administrative offices have been fully operational since 2010 at the Main Campus,

such as the Chancellery, Registrar, Bursary, Knowledge and Communication Services Centre, Centre for Academic Excellence and Scholarship, Centre for Strategic, Quality and Risk Management, University Press, Laman Hikmah Library, Grand Hall and Sayyidina Abu Bakar Mosque.

1.3.2 Technology Campus

The Technology Campus is located in Kawasan Perindustrian Tasik Utama, Ayer Keroh which houses the Faculty of Mechanical Engineering, Faculty of Mechanical & Manufacturing Engineering Technology (FTKMP) and Faculty of Electrical & Electronic Engineering Technology (FTKEE). and Institute of Technology Management and Entrepreneurship (IPTK). Most of FKM's laboratories are located at the Mechanical Engineering Laboratory Complex, Factory 5, Technology Campus.

1.4 University Organization

In 2004, UTeM revamped its structure of organization. New departments were established including the Centre for Teaching & Learning (PPP), Centre for Graduate Studies (PPS), and Centre for Quality Assurance & Accreditation (PJKA) which is now known as Centre for Strategic, Quality & Risk Management (PPSKR). In 2008, several other centres were opened including Centre for Languages & Human Development (PBPI), Sports Centre, and Islamic Centre.

The university's organization consists of the University's Senate and the University Executive Council. In 2010, there are improvements on the university's structure of organization. Shown in Figure 1.1 is the current organization structure of UTeM top management.

a. Administration :
   i. Chancellory
   ii. Deputy Vice Chancellor (Academic & International) Office
   iii. Deputy Vice Chancellor (Research & Innovation) Office
   iv. Deputy Vice Chancellor (Student Affairs) Office
   v. Assistant Vice Chancellor (Industry & Community) Office
   vi. Registrar

vii. Bursary
viii. Chief Information Officer Office

b. Academic :

i. Centre for Graduate Studies
ii. Faculty of Electronics & Computer Engineering
iii. Faculty of Electrical Engineering
iv. Faculty of Mechanical Engineering
v. Faculty of Manufacturing Engineering
vi. Faculty of Information & Communication Technology
vii. Faculty of Technology Management & Technopreneurship
viii. Faculty of Mechanical & Manufacturing Engineering Technology
ix. Faculty of Electrical & Electronic Engineering Technology
x. Centre for Languages & Human Development
xi. Institute of Technology Management & Entrepreneurship

1.5 Academic Calendar

The Academic Calendar for each session can be accessed from UTeM website.
https://www.utem.edu.my/academic-calendar.html

2 BACKGROUND OF FKM

2.1 Introduction

The Faculty of Mechanical Engineering (FKM), UTeM was established after the approval was granted by the Ministry of Education Malaysia on the 22nd June 2001. The faculty administration office and lecture rooms are located in Technology Campus, Taman Tasik Utama, Ayer Keroh. A laboratory complex nearby was built to host the laboratories, workshops and lecture rooms. Complete locations of facilities can be referred in Chapter 7. Currently, the faculty offers both undergraduate and postgraduate programmes. The undergraduate programmes offered are Diploma in Mechanical Engineering (DMC), Bachelor of Mechanical Engineering with Honours (BMCG) and Bachelor of Automotive Engineering with Honours (BMCK) programmes whilst the post graduate programmes are Master of Science by research, Master of Mechanical Engineering (Taught Course), Doctor of Philosophy (PhD) and Doctor of Engineering (D.Eng) programmes. Bachelor of Mechanical Engineering with Honours (BMCG) programme was offered in part time mode since semester 2 session 2017/2018.

2.2 Vision, Mission and Objectives

In order to achieve the objectives of the Faculty, a framework of policy implementation is developed. The followings are the vision, mission and objectives of programmes offered by the Faculty.

2.2.1 Vision

To be an ideal, dynamic and innovative faculty.

2.2.2 Mission

To produce highly competent mechanical engineering graduate having good moral and ethical values.

2.2.3 Objectives

a. To offer high quality academic programmes with emphasis on practice and application oriented mechanical engineering discipline in line with the current industrial requirement and be recognized by professional bodies.
b. To produce competent mechanical engineering graduate with critical thinking, innovative and have the ability to solve problem either in group or individual in the process of fulfilling the national human capital requirement.
c. To upgrade expertise and competency of the staff by conducting various quality and well organized human resource development programmes based on good ethical and moral values.
d. To perform the research and development activities based on industrial problems in the process to develop post-graduate programmes and to produce prototypes that could be patented and commercialized.
e. To conduct teaching and learning based on writing and publication activities as well as research and consultancy activities.
f. To promote smart partnership between university and industry at faculty level.
g. To offer services in consultancy and life-long learning with practical and application oriented in the field of mechanical engineering and in other strategic field or specialization to meet the requirement of domestic and global market.

2.3 Faculty Organization

The faculty administration is headed by a Dean and assisted by three Deputy Deans who are responsible in academic, research & postgraduate studies and student

development. Departments are managed by Head of Department. Currently FKM has two departments, namely Department of Mechanical Engineering, and Department of Diploma Studies. Each Head of Department is entrusted and is responsible for the academic activities and physical development of the infrastructure and facilities. There are also programme coordinators who assist further in management of academic and postgraduate programmes.

The research activities are coordinated by the Research Coordinator to manage the Centre of Excellence (CoE). The research activities are coordinated with the Manager of the Centre of Excellence (CoE). The CoE for FKM is known as the Centre for Advanced Research on Energy (CARe). Figure 2.1 shows the current FKM top management. The Administrative Office of FKM is located at Level 4 FKM Building, Technology Campus, where the office of Dean, Deputy Deans, Head of Departments, Chief Assistant Registrar, Assistant Registrar and administrative support staffs are located. The management of laboratories at FKM is handled by a Lab Coordinator. The complete FKM organization structure is shown in Figure 2.2.

3 ACADEMIC PROGRAMMES

3.1 Introduction

The Faculty of Mechanical Engineering offers academic programmes at both undergraduate and postgraduate levels. This handbook focuses on information pertaining to the undergraduate programmes full time mode. The programmes offered at undergraduate level are the Bachelor of Mechanical Engineering with Honours (BMCG), the Bachelor of Automotive Engineering with Honours (BMCK), and the Diploma in Mechanical Engineering (DMC). The normal study periods for BMCG, BMCK and DMC programmes are four years (for bachelor) and two and a half years (for diploma), respectively. The curriculum structures of BMCG, BMCK and DMC programmes are explained in Sections 3.6, 3.8, and 3.10, respectively.

Starting from Semester 1 Session 2014/2015, the faculty offers only one bachelor degree programme (BMCG). The purpose of offering a single programme is to produce graduates with broad engineering skills and therefore, highly adaptable to the job market. The specialization of students into various mechanical engineering fields will be accomplished through the offering of elective courses in Year 4. Over the years, demand has increased for workforce in automotive industries. This is addressed by FKM through the offer of BMCK programme beginning from Semester 1 2019/2020.

The faculty's commitment in providing quality education programme continues by adhering to the guidelines set by the Engineering Accreditation Council of Malaysia (EAC). In addition, the faculty also continues the implementation of Outcome-Based Education (OBE) which has also been used by a large number of leading universities around the world. Using OBE system, the teaching and learning process is tailored to develop balanced graduates based on the objectives set in Programme Educational Objectives (PEO). Every taught course carries a set of learning outcomes (LOs), which students need to achieve upon completion of the course. These LOs are mapped to Programme Outcomes (POs) for assessment purposes.

3.2 Programme Educational Objectives (PEO)

PEOs are specific goals consistent with the mission and vision of the University, that are responsive to the expressed interest of programme stakeholders, describing the expected achievements of graduates in their career and professional life, few years after graduation.

3.2.1 PEO for BMCG and DMC Programme

The graduates from this programme are expected to become:

PEO1 Graduates who are competent and adaptable in multi industries by practicing the knowledge in mechanical engineering that is relevant to professional engineering practice. **(Competency)**

PEO2 Graduates who will pursue study in graduate works and others professional courses. **(Lifelong Learning)**

PEO3 Graduates who will be leader at note-worthy level and provide solutions that benefited the respective organization, society and nation. **(Leadership)**

3.2.2 PEO for BMCK Programme

The Faculty Program Objectives are to produce:

PEO1 Graduates who are competent and adaptable in multi industries by practicing the knowledge in mechanical-automotive engineering that is in accordance to the professional engineering practice. **(Competency)**

PEO2 Graduates who will further study at postgraduate level or other professional courses. **(Lifelong Learning)**

PEO3 Graduates who will be leader at note-worthy level and provide solutions that benefited the respective organization, society and nation. **(Leadership)**

3.3 Programme Outcomes (PO)

POs are statements that describe what students are expected to know and able to perform or attain by the time of graduation. These relate to the skills, knowledge, and behaviour that students acquire through the programme.

3.3.1 PO for BMCG Programme

The graduates from this programme are expected to be able to:

PO1 Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex mechanical engineering problems. (**Engineering Knowledge**)

PO2 Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principle of mathematics, natural sciences and engineering sciences. (**Problem Analysis**)

PO3 Utilize a systematic approach to design solution for complex engineering problem that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental consideration. (**Design/Development of Solutions**)

PO4 Conduct investigations of complex problem using research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions. (**Investigation**)

PO5 Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, with an understanding of the limitations. (**Modern Tool Usage**)

PO6 Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and consequent responsibilities relevant to professional engineering practice. (**The Engineer and Society**)

PO7 Understand and evaluate the sustainability and impact of professional engineering work in the solutions of complex engineering problems in societal and environmental context. (**Environment and Sustainability**)

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice. **(Ethics)**

PO9 Communicate effectively on complex engineering activities with engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions. **(Communication)**

PO10 Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings. **(Individual and Team Work)**

PO11 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. **(Life Long Learning)**

PO12 Demonstrate knowledge and understanding of engineering management principles and economic decision-making and apply them effectively as a member and leader in a team to manage projects and in multidisciplinary environments. **(Project Management and Finance**)

3.3.2 PO for BMCK Programme

The graduates from this programme are expected to be able to:

PO1 Apply knowledge of mathematics, natural science, engineering fundamentals and an engineering specialization to the solution of complex mechanical-automotive engineering problems. **(Engineering Knowledge)**

PO2 Identify, formulate, research literature and analyze complex automotive engineering problems reaching substantiated conclusions using first principle of mathematics, natural sciences and engineering sciences. **(Problem Analysis)**

PO3 Utilize a systematic approach to design solution for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental consideration. **(Design/Development of Solution)**

PO4 Conduct investigations of complex problem using research-based knowledge and research methods including design of experiments, analysis and

interpretation of data, and synthesis of information to provide valid conclusions. **(Investigation)**

PO5 Create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, with an understanding of the limitations. **(Modern Tool Usage)**

PO6 Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and consequent responsibilities relevant to professional engineering practice. **(The Engineer and Society)**

PO7 Understand and evaluate the sustainability and impact of professional engineering work in the solutions of complex engineering problems in societal and environmental contexts. **(Environment and Sustainability)**

PO8 Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice. **(Ethics)**

PO9 Communicate effectively on complex engineering activities with engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions. **(Communication)**

PO10 Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings. **(Individual and Team Work)**

PO11 Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. **(Lifelong Learning)**

PO12 Demonstrate knowledge and understanding of engineering management principles and economic decision-making and apply them effectively as a member and leader in a team to manage projects and in multidisciplinary environments. **(Project Management and Finance)**

3.3.3 PO for DMC Programme

The graduate from this programme are expected to be able to:

PO1 Apply knowledge of applied mathematics, applied science, engineering fundamentals and an engineering specialization to wide practical procedures and practices. **(Engineering Knowledge)**

PO2 Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to their field of activity. **(Problem Analysis)**

PO3 Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations. **(Design/Development of Solution)**

PO4 Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurements. **(Investigation)**

PO5 Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations. **(Modern Tool Usage)**

PO6 Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems. **(The Engineer and Society)**

PO7 Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts. **(Environment and Sustainability)**

PO8 Understand and commit to professional ethics and responsibilities and norms of technician practice. **(Ethics)**

PO9 Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions. **(Communication)**

PO10 Function effectively as an individual, and as a member in diverse technical teams. **(Individual and Team Work)**

PO11 Recognise the need for, and have the ability to engage in independent updating in the context of specialised technical knowledge. **(Lifelong Learning)**

PO12 Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments. **(Project Management and Finance)**

3.4 Career in Mechanical Engineering

Career as a mechanical engineer or assistant mechanical engineer (technical assistant) is highly remunerated, however it demands great responsibilities. Engineers and assistant engineers are problem solvers who provide solutions to any engineering problem that arises. In other words, they are knowledgeable people with the ability to solve problems. Hence, mechanical engineer must be of very skilled person and comfortable with his or her knowledge in mechanical engineering.

Mechanical engineering typically exists together with electrical and civil engineering in terms of its historical development. Due to highly ethical and challenging nature of the engineers and assistant engineers' job scope, it gained a professional and semi professional recognition. Therefore, it is the aim of every mechanical engineer to be recognised professionally in terms of their ability and competency. There are avenues where mechanical engineer can be registered as a Professional Engineer.

Engineers or assistant engineers must possess good ethical values. Virtues are universal, irrespective of his or her position, place of work or race. Engineer and assistant engineer must heed those virtues which include sincerity, transparency and consistency. Other qualities needed by engineers are computer-literate, good in interpersonal skills, creative and critical thinking skills.

Upon the completion of mechanical engineering programmes at Bachelor' Degree or Diploma level, graduates have vast career opportunities. Mechanical Engineer and Assistant Mechanical Engineer are mostly employed in the manufacturing, automotive, marine, aerospace, oil & gas, robotic, mining and food and beverage (F&B) industries.

The job scope of a Mechanical Engineer and an Assistant Mechanical Engineer among others are design, material selections and analysis of manufactured products. Some examples of the product include home appliances, health care and sport equipment, instrumentation and crafts. Other fields of work include integration of mechanical, electronic engineering and computer control in the field of mechatronics.

Mechanical engineering graduates are employed in many industrial sectors which encompass the following work environments:-

a. Design and manufacturing of automotive components and engine
b. Defence industries, power generation and environmental protection
c. Marine industries and sea transport
d. Automation, control and robotic industries
e. Heavy machinery industries that use hydraulic and pneumatic system, electronic and digital driven machines
f. Agricultural and food production industries
g. Petrochemical, gas and mineral industries
h. Biotechnology and biomedical industries
i. Research and development, engineering management and service industries
j. Construction of building mechanical system

Graduates from the Bachelor of Automotive Engineering with Honours programme are expected to have a strong automotive engineering background and the required skills. They would usually work or build their career as an engineer in the field of:

a. Research & Development Engineer, Design Engineers, Production Engineers, Manufacturing Engineers, Quality Control/Quality Assurance Engineers, Sales Engineers and Consultants

b. Research and Development in automotive manufacturing
c. Design and innovation of vehicle components such as engine, chassis, vehicle interior, electrical, suspension, braking and structure analysis as well as other vehicle subsystems
d. Industrial equipment layout and workflow in automotive industry
e. Consultant for automotive components in terms of its validation, design reliability and quality
f. Maintenance management and vehicle recondition
g. Design and improvement of vehicle ride & handling as well as power train system

Autonomous vehicles are expected to be available in the near future. In order to equip the students with the technologies related to autonomous vehicles, courses such as Vehicle Control System and Vehicle Autonomous System are included in the curriculum of the BMCK programme. These courses will cover the control system technologies, trajectory planning and tracking, and collision avoidance which are important topics for autonomous vehicles.

In the industry, graduates of mechanical engineering are highly marketable and hold a wide range of positions either in public agencies or private companies which include:

a. Mechanical Engineer
b. Sale & Service Engineer
c. Project Engineer
d. Technical Engineer
e. Production Engineer
f. Industrial Engineer
g. Plant Engineer
h. Design Engineer
i. Maintenance Engineer
j. Assistant Lecturer
k. Research Officer

l. Technical Officer

On the other hand, mechanical engineering diploma holders are highly sought after and often hired to hold positions such as:

a. Assistant Mechanical Engineer
b. Assistant Service Engineer
c. Assistant Project Engineer
d. Assistant Technical Engineer
e. Assistant Product Engineer
f. Assistant Industrial Engineer
g. Assistant Plant Engineer
h. Assistant Design Engineer
i. Assistant Maintenance Engineer
j. Assistant Research Officer
k. Assistant Technical Officer

3.5 Bachelor of Mechanical Engineering with Honours (BMCG)

The curriculum structure for the first two years of the Bachelor of Mechanical Engineering with Honours (BMCG) is designed to improve students' basic mechanical engineering knowledge before engaging in more advanced programme courses. Engineering Mathematics, Engineering Materials, Engineering Graphics and CAD, Statics, Differential Equation, Computer Aided Design and Manufacturing, Electrical Systems, Principles of Measurement and Instrumentation, and Statistics are among the courses offered. The practical work and workshops are intended to help students improve their knowledge and skills. Students will also take Languages Elective, English for Academic Purposes, Philosophy and Current Issues, and Co-Curriculum courses.

In Year 3, students will pursue advanced courses in addition to the compulsory university courses as part of the core curriculum. During the special semester, students must undergo at least 10 weeks of industrial training in industries (after semester 6).

The goals are to develop engineering knowledge, theory, and hands-on abilities. This programme is aimed to give our graduates with sufficient technical skills. This training is expected to provide our graduates with enough technical knowledge to advance into a real-world career in industry.

Fourth-year (final-year) students in their 7th and 8th semesters must complete Integrated Design Project, Final Year Project (FYP), as well as programme core and optional courses focused on advanced mechanical engineering knowledge. Students will also take a number of key courses, including Sustainability and Environment, Engineer & Society, Engineering Seminar, and Entrepreneurship Technology. The courses are designed to provide students with soft skills such as engineering management, entrepreneurship, and a moral development programme. The goal is to produce mechanical engineering graduates who are knowledgeable in their specialised field as well as non-technical disciplines. A Bachelor of Mechanical Engineering with Honours degree requires a minimum of **135** credits. Table 5.9 shows a categorization of course credits.

3.6 Curriculum Structure for BMCG Programme

YEAR 1 (SEMESTER I)

CODE	COURSE	CATEGORY	CREDIT	PRE-REQUISITE
BLLW 1142	ENGLISH FOR ACADEMIC PURPOSES	W	2	-
BIPW 1132	PHILOSOPHY AND CURRENT ISSUES	W	2	-
BMFG 1313	ENGINEERING MATHEMATICS I	P	3	-
BMCG 1523	ENGINEERING GRAPHICS AND CAD	P	3	-
BMFG 1213	ENGINEERING MATERIALS	P	3	-
BMCG 1113	STATICS	P	3	-
TOTAL			16	

YEAR 1 (SEMESTER 2)

CODE	COURSE	CATEGORY	CREDIT	PRE-REQUISITE
BKKX XXX1	CO-CURRICULUM I*	W	1	-
BMCG 1013	DIFFERENTIAL EQUATIONS	P	3	-
BEKG 1233	PRINCIPLES OF MEASUREMENT AND INSTRUMENTATION	P	3	-
BMCG 2713	THERMODYNAMICS I	K	3	-
BMCG 1213	DYNAMICS	K	3	-
BMCG 2021	MECHANICAL ENGINEERING WORKSHOP	K	1	-
BMCG 2312	MANUFACTURING PROCESS	K	2	-

3.7 Bachelor of Automotive Engineering with Honours (BMCK)

The curriculum structure for the first year of the Bachelor of Automotive Engineering with Honours (BMCK) is designed to improve students' basic engineering and mathematics knowledge before engaging in more specialised mechanical and automotive engineering courses. These courses include Engineering Mathematics I, Engineering Graphics and CAD, Engineering Materials, Engineering Mechanics, Differential Equation, Computer Programming, Principles of Electric and Electronics, Principles of Measurements and Instrumentation, and Manufacturing Process. The practical work is intended to improve students' knowledge and skills. Students will also take courses such as Language Elective, Philosophy and Current Issues, and Co-Curriculum I.

Year 2 students will learn about mechanical and automotive engineering. Among the courses available are fluid mechanics, thermodynamics, computer-aided design and manufacturing, automotive technology, mechanical design, microprocessor technology, solid mechanics, and vehicle electrical and electronic systems. Engineering Mathematics II will also be taught to the students. Students will also be required to take university-compulsory courses such as Appreciation of Ethics and Civilization, Co-Curriculum II, and Technical English.

In Year 3, students will study Control Engineering, Heat Transfer, Vehicle Dynamics, Vehicle Aerodynamics, Mechanical Vibration, Vehicle System Modelling & Simulation, Internal Combustion Engine, and Engineering Statistics. In this year, students must also begin a project in Integrated Design Project I. In addition, the students will study English for Professional Interaction. Students are then required to complete at least 10 weeks of industrial training in selected industries during the short semester (after semester 6). The goals are to improve engineering knowledge and theory, as well as hands-on skills. It is expected that this training will provide our graduates with sufficient technical knowledge to advance into a real-world career in industry.

Fourth-year students (final year) in their 7th and 8th semesters must complete Integrated Design Project II, Final Year Project (FYP), programme core and elective courses focused on advanced knowledge of Automotive Engineering. The program's core courses include Vehicle Control System and Vehicle Autonomous System. Elective courses include Noise, Vibration & Harshness, Vehicle Powertrain Systems, Vehicle Structure Analysis, Vehicle Ergonomics, Electric Propulsion System, and Automotive Manufacturing Systems. In addition, students will also undertake a number of important courses such as Engineering Seminar, Engineer & Society, Entrepreneurship Technology, Critical and Creative Thinking, and Engineering Management & Economy. These courses are designed to provide students with soft skills such as engineering management, entrepreneurship, and a moral development programme. The goal is to produce automotive engineering graduates who are well-versed in both their specialised field and non-technical fields. A Bachelor of Automotive Engineering with Honours degree requires a minimum of **135** credits. Table 5.9 displays a classification of course credits.

3.9 Diploma in Mechanical Engineering (DMC)

The Year 1 DMC programme curriculum structure focuses on knowledge consolidation for SPM school leavers from technical, vocational, and government-aided schools. The courses offered by the Faculty are; Fundamental Mathematics, Experimental Method, Chemistry, Fundamental Physics, Electrical & Electronic Principles, Technology and Engineering Workshop Practice I, Calculus, Computer Programming, Manufacturing Process, Engineering Graphics, Technology and Engineering Workshop Practice I and

II, Statics, Engineering Mathematics, and Materials Science that provide students with opportunities to improve their knowledge and skills in mechanical field. Aside from engineering courses, students are also take Foundation English, Leadership, Asas Pembudayaan Keusahawanan, Co-Curriculum I and II, and English for Effective Communication.

Year 2 subjects include Differential Equations, Engineering Design, Hydraulic and Pneumatics, Solid Mechanics, Dynamics, Thermodynamics, Statistics, Fluid Mechanics, Machine Mechanics, Fundamental Electric and Microprocessor, and Occupational Safety and Health. Students take English for Marketability classes as well as engineering courses. Students in Year 2 must also complete projects for Diploma Project I and Diploma Project II.

In Year 3, students must complete a minimum of 16 weeks of industrial training in various related industries. During this industrial training, students will be exposed to a real industrial working environment.

With this curriculum, diploma engineering graduates are expected to have high technical knowledge and skills, as well as a positive attitude, in accordance with Malaysia's Education Blueprint 2015-2025. (Higher Education). It aims to provide future graduates with technical knowledge/skills and preparation through actual work experience in the industrial sector. The Diploma in Mechanical Engineering requires a minimum of **91** credits. Table 5.9 shows a categorization of course credits.

4 SYLLABUS SYNOPSIS

4.1 Bachelor of Mechanical Engineering with Honours (BMCG)

YEAR 1 COURSES - UNIVERSITY COMPULSORY

BLLW 1142: ENGLISH FOR ACADEMIC PURPOSES

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Apply correct grammar rules according to context.

LO2 Demonstrate knowledge of various reading skills in the reading tasks given.

SYNOPSIS

This course aims to develop students' reading skills and grammar. A variety of academic reading texts and reading skills are explored to facilitate students' comprehension of the texts. These reading skills are also necessary in assisting students to master study skills. Grammar elements are taught in context to develop students' accuracy in the use of the language. This course also includes elements of blended learning.

BIPW 1132: PHILOSOPHY AND CURRENT ISSUES (FALSAFAH DAN ISU SEMASA)

LEARNING OUTCOMES

In the end of this course, the students are able to:

LO1 Explain the current issues related to philosophy, National Education Philosophy and National Ideology.

LO2 Analyze the current issues based on main scholarly thought and various philosophical theories.

LO3 Examine the current issues according to philosophical comparative studies between dialogue and culture.

SYNOPSIS

This course will discuss on the concept of knowledge, ethics and civilization which

emphasize on comparative available systems, social development and multi-cross cultural activities in Malaysia. Besides, this course is stressing on current and contemporary issues discussion related to economy, politic, social, culture and environment based on ethical and civilizational approach. This course will cover the comparative system, developmental phase, social development and cross cultural activities in order to produce a man with positive values.

BKKX XXX1: CO-CURRICULUM I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Recognise a balanced and comprehensive education.
LO2 Develop leadership aspects stressing on diciplines and cooperation within a group or organisaton.
LO3 Build personality and character guided by rules of conduct.
LO4 Foster cooperation and unity in multi-racial society.

SYNOPSIS

YEAR 1 COURSES - COMMON CORE

BMFG 1313: ENGINEERING MATHEMATICS 1

LEARNING OUTCOMES

Upon completion of this subject, students should be able to:

LO1 Identify the domain and range of multivariable functions.

LO2 Solve double and triple integrals using various techniques.

LO3 Apply integration techniques to solve for mass, moments and lamina.

LO4 Perform given tasks that pertain to engineering problems using vector-valued functions.

SYNOPSIS

This course is a blend of analytical and numerical approaches that mainly focusing on the matrices, nonlinear equations, eigenvalues and eigen vectors, complex numbers, interpolation, differentiation, integration and vector valued functions.

BMCG 1523: ENGINEERING GRAPHICS AND CAD

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain the engineering graphics fundamentals.

LO2 Construct technical drawing using manual sketching and computer aided design.

LO3 Communicate by using engineering drawings.

SYNOPSIS

The course will provide students with an understanding of the importance of engineering graphics as a communication tool among engineers. Student will be exposed to the engineering graphics fundamentals of manual sketching, geometric dimensioning and tolerancing, graphic projections, sectioning and engineering drawings. Students will develop visualization skills by constructing technical drawings using manual sketches and computer aided design (CAD) software. The course consists of both lecture and practical session where students will be guided in presenting and interpreting engineering drawings correctly.

BMFG 1213: ENGINEERING MATERIALS

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Explain the basic concepts of engineering materials in terms of interatomic bonding and crystal structure.

LO2 Analyze the properties of engineering materials based on its structure.

LO3 Apply the basic understanding of engineering materials properties to determine their processing method.

SYNOPSIS

This course introduces basic concepts of engineering materials that covers introduction to engineering materials, interatomic bonding, crystalline structure and imperfections and diffusion in solid. Explanation on different types of engineering material (i.e. metal, ceramic, polymer and composites), its mechanical properties, basic applications and processing are also included. Introduction to the binary phase diagrams (composition and microstructure correlation) is also given.

BMCG 1113: STATICS

LEARNING OUTCOMES

On successful completion of this course, student should be able to:

LO1 Describe and apply the basic concepts and fundamental principles of engineering mechanics (statics).
LO2 Analyze and solve equilibrium problems of particle.
LO3 Analyze and solve equilibrium problems of rigid body.

SYNOPSIS

The engineering mechanics of statics provides an introduction and the basic concept of statics as physical sciences, system of units, scalars and vectors, Free Body Diagram, forces system, force system resultants and moment, equilibrium of a particle, equilibrium of a rigid body, structural analysis (trusses analysis and simple frames and machines), friction and center of gravity and centroid.

BMCG 1013: DIFFERENTIAL EQUATIONS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the basic concept and solution of second order differential equations, Laplace transform and Fourier series.

LO2 Select an appropriate technique to solve problems involving differential equations.

LO3 Apply the concept of differential equations in solving engineering problems.

SYNOPSIS

This course is intended to introduce the concept and theories of differential equations. Second order linear differential equations with constant coefficients will be solved by using the methods of undetermined coefficient, variation of parameters and Laplace transform. Fourier series in relation to periodic functions will be discussed. An introduction to the solution and application of partial differential equations with boundary value problems using the method of separation of variables and Fourier series will also be discussed.

BEKG 1233: PRINCIPLES OF MEASUREMENT AND INSTRUMENTATION

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Describe the principle, various terms and standards in measurement.

LO2 Explain the principles of measurement devices.

LO3 Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.

LO4 Explain the operation, function and applications of transducers/sensors.

SYNOPSIS

This course discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement devices such as galvanometers, ammeters, voltmeters, wattmeter, temperature, force and torque and pressure measurement as well as accelerometer. It also introduces oscilloscope and sensors for instrumentation application.

YEAR 1 COURSES - PROGRAMME CORE

BMCG 2713: THERMODYNAMICS I

LEARNING OUTCOMES

At the end of this course, student should be able to:

LO1 Define the First and Second Law of Thermodynamics.
LO2 Apply the thermodynamic principles using property tables.
LO3 Solve the thermodynamics processes relating to ideal gas and pure substances.

SYNOPSIS

The aim of this course is to provide students a basic understanding of the thermodynamics fundamental laws and the ability to implement them in solving a range of simple engineering problems. The course covers the following topics:

- Introduction to thermodynamics: relevance in the context of energy and the environment.
- Basic concepts: microscopic and macroscopic points of view, system and control volume approaches, properties, state, equilibrium, processes and cycles.
- Energy, heat, work and the First Law: kinetic, potential and internal energy; heat transfer; displacement work and shaft work; the first law of thermodynamics for a system.
- Properties of substances: pure substances; the two-property rule, state

diagrams; intensive and extensive properties; internal energy, enthalpy and specific heats; ideal and perfect gases; phase change, vapour and liquid properties, steam and water.

- The First Law for flow processes: the steady-flow energy equation and application to e.g. throttling processes, nozzles, turbines, pumps, compressors.
- Consequences of the Second law: Clausius inequality, definition of entropy, state diagrams using entropy; T dS relationships; isentropic processes for perfect gases; isentropic efficiency; simple ideas of work potential in the presence of the environment.

BMCG 1213: DYNAMICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe the fundamentals of dynamics.
LO2 Apply the dynamics of particles and rigid bodies using principle of force and acceleration, work and energy, and impulse and momentum.
LO3 Analyze the dynamics of particles and rigid bodies by using the principle of dynamics.

SYNOPSIS

This course introduces the principle of kinematics and kinetics of particles and rigid bodies. The lessons cover the concept of position, velocity and acceleration of particles; and application of Newton's second law, Principle of Work and Energy, Principle of Impulse and Momentum for both particles and rigid bodies.

BMCG 2021: MECHANICAL ENGINEERING WORKSHOP

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify common shop hazards and use common shop safety equipments.

LO2 Use various kinds of hand tools, measuring tools and equipments for workshop practice.

LO3 Work as an effective member of a team to produce engineering products.

SYNOPSIS

This course covers the fundamentals of cutting, forming, joining and machining processes. The processes include sheet metal forming, welding, conventional milling and CNC Lathe. Other aspects such as handling, safety regulations, and main functions of the machining are introduced. The students will be exposed with practical use of the machine.

c. Mike, T., 2000, *Basic Manufacturing*, Butterworth-Heinemann.

BMCG 2312: MANUFACTURING PROCESS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain the processes and aspects involved in manufacturing and manufacturing related activities.

LO2 Discuss the manufacturing and manufacturing related activities issues on sustainability of resources and environment.

LO3 Engage in the in life long learning in the context of manufacturing technology changes.

SYNOPSIS

This course covers theoretical issues of manufacturing and the quality aspects of manufacturing such as quality assurance and tolerance. The type and fundamental principle of joining processes, metal casting processes, forming processes, shaping processes, material removal processes, modern machining processes and their equipments are also covered. The quantitative problem analysis of certain manufacturing processes is included as well. Societal and environment issue in manufacturing processes are also included. Finally the need to engage in life-long learning processes is emphasised as to

ensure students alert on the manufacturing technological changes.

YEAR 2 COURSES - UNIVERSITY COMPULSORY

BIPW 2132: APPRECIATION OF ETHICS AND CIVILIZATION (PENGHAYATAN ETIKA DAN PERADABAN)*

* For Malaysian students only

LEARNING OUTCOMES

Pada akhir kursus ini, pelajar akan dapat:

LO1 Menjelaskan konsep etika daripada perspektif peradaban yang berbeza.

LO2 Membandingkan sistem, tahap perkembangan, kemajuan sosial dan kebudayaan merentas bangsa.

LO3 Membincangkan isu kontemporari berkaitan ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban.

SYNOPSIS

Kursus ini menerangkan tentang konsep etika daripada perspektif peradaban yang berbeza. Ia bertujuan bagi mengenal pasti sistem, tahap perkembangan, kemajuan dan kebudayaan sesuatu bangsa dalam mengukuhkan kesepaduan sosial. Selain itu, perbincangan berkaitan isu-isu kontemporari dalam aspek ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban dapat melahirkan pelajar yang bermoral dan profesional. Penerapan amalan pendidikan berimpak tinggi (HIEPs) yang bersesuaian digunakan dalam penyampaian kursus ini. Di hujung kursus ini pelajar akan dapat menghubungkaitkan etika dan kewarganegaraan berminda sivik.

BIPW 2122: MALAYSIAN CULTURE*

* For international students only

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Discuss issues related to Malaysian culture.

LO2 Present issues related to Malaysian culture.

LO3 Reflect the scenario of cultural diversity in Malaysia.

LO4 Describe an element in Malaysian culture.

SYNOPSIS

This course exposes international students to the socio-cultural background of Malaysia which includes ethnic composition, religions, traditions and values. Other elements like music, arts, cuisine, costume, ethnic games, celebrations and national festivals are also highlighted. Student Centered Learning (SCL) methods such as group discussion and presentation will be used in order to assist international students in developing their understanding and appreciation of Malaysian culture.

BLLW 2152: ACADEMIC WRITING

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Prepare clear and detailed descriptions of a product related to fields of interest.

LO2 Express arguments systematically in a composition.

LO3 Prepare short reviews of technical materials.

SYNOPSIS

This course aims to equip the students with the skills to communicate clear and detailed viewpoints in writing. The students are expected to have a stand on topics of their fields by providing advantages and disadvantages to support their arguments. From time to time, consultations with the students will be conducted throughout the completion of their assignments. This serves as the formative evaluation in the course. Grammar components are embedded in the course to support the required writing skills. Blended learning is incorporated in this course.

BKXX XXXI: CO-CURRICULUM II

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Recognise a balanced and comprehensive education
LO2 Develop leadership aspects stressing on diciplines and cooperation within a group or organisaton.
LO3 Build personality and character guided by rules of conduct.
LO4 Foster cooperation and unity in multi-racial society.

SYNOPSIS

a. Cultural

c. Society
   Fiqh Muamalat, Fiqh Amali, Tahsin Al-Quran & Yaasin and Peer Program.
d. Recreation
   Go-Kart, Adventure and Cycling.
e. Sports
   Swimming, Volley Ball, Golf, Takraw, Aerobic, Badminton, Football and Net ball.
f. Martial Arts Silat Gayong, Karate-Do and Taekwando.

YEAR 2 COURSES - COMMON CORE

BEKG 2443: ENGINEERING MATHEMATICS II

LEARNING OUTCOMES

Upon completion of this subject, students should be able to:

LO1 Describe the fundamental concepts of multivariable functions, multiple integrals and vector calculus.

LO2 Solve the mathematical problems that involve function of several variable, multiple integrals and vector calculus.
LO3 Apply the knowledge of advanced engineering mathematics to deal with the engineering problems.

SYNOPSIS

This course consists of three chapters: Function of Several Variables: Functions of Two or More Variables, Limit and Continuity, Partial Derivatives, Total Differential, Chain Rule, Implicit Differentiation and Local Extrema.

Multiple Integrals: Double Integral, Double Integral Over Non-rectangular Regions, Double Integral in Polar Coordinates, Triple Integral, Triple Integral in Cylindrical and Spherical Coordinates and Moment and Centre of Gravity.

Vector Calculus: Vector fields, Line integral, Green's theorem, Curl and Divergence, Parametric surfaces and their Areas, Surface integrals, Stoke's theorem and Divergence theorem.

BEKG 1123: PRINCIPLES OF ELECTRIC AND ELECTRONICS

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Explain the basic principles of electrical and electronics components, terminologies, configuration, laws and rules.
LO2 Apply appropriate circuit analysis methods to solve DC (resistive) circuits problems.
LO3 Analyze circuits containing semiconductor devices.

SYNOPSIS

This course will discuss about the basic principles of electrical and electronics; Introduction to electric element, symbol and components. KCL, KVL, Node and Mesh in solving DC series and parallel circuit. Introduction in magnetism, electromagnetism and AC characteristic. Introduction to semiconductors, atomic structures, energy band, P-type and N-

type. Study on structure, principle and application of diode, BJT and Op-Amp circuits.

BENG 2143: ENGINEERING STATISTICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Apply the concepts of data description, normal and sampling distributions, estimation and hypothesis testing, ANOVA, regression and non-parametric tests to solve mathematical problems.
LO2 Analyze engineering data using descriptive statistics.
LO3 Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression.

SYNOPSIS

The outcome of this course is to deliver statistical techniques and tools for data analysis. The course begins with data description. Then, students will be exposed to normal and sampling distributions, estimation and hypothesis testing for one and two populations. In addition, ANOVA, simple linear regression, multiple linear regression and polynomial regression will be taught in this course. Apart from that, students will learn non-parametric statistics. Finally, students will apply their knowledge in statistical software application which are widely used in the industry.

BEKG 2433: ELECTRICAL SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the major components of electrical power system: generation, transmission, and distribution system.

LO2 Calculate the AC voltage and current characteristic in AC circuits.

LO3 Analyze the single and three phase circuits by emphizing on complex power and power factor correction.

LO4 Analyze the magnetic, single phase transformer and three phase transformer equivalent circuits.

SYNOPSIS

This is an introductory course for students on the fundamental knowledge of electrical power system. The students will be taught on the physics of electrical power system, which includes the theory and analysis of electromagnetism, followed bypower concepts &equations (single and three phase), power factor &power factor corrections, single and three-phase system and per-unit calculation. There will also topics on characteristics for static and rotating electric machine principles, including AC, DC, synchronous, induction motor and transformer. Furthermore, students will be introduced to the concepts on the electric power system network (generation, transmission and distribution) and various power generation system and energy sources.The students will also learn on basic characteristics and performance of electrical transmission line and distribution system.

YEAR 2 COURSES - PROGRAMME CORE

BMCG 1011: MECHANICAL ENGINEERING LABORATORY I

LEARNING OUTCOMES

At the end of the session, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.

LO2 Use basic mechanical engineering instruments to measure engineering variables pertinent to the conducted experiments.

LO3 Write a well organised, sensible and readable technical reports which describe the experiment in a standard writing format.

SYNOPSIS

Introduction to Science, Engineering and Technology. Introduction to safety. Ethics in laboratory. Use of scientific method. Mechanical measurement concept. Introduction to measuring devices. Basic engineering instruments. Use of instrument to measure engineering variables. Experimental report writing.

The experiments will be conducted in mechanical engineering laboratories that study fundamental engineering concepts in statics, dynamics, material sciences, measurements and instrumentation as well as engineering drawing.

c. Holman, J.P. 2001. Experimental Methods for Engineers. 7th Ed., McGraw Hill.

BMCG 2113: SOLID MECHANICS I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe and apply the basic concepts and fundamental principles of solid mechanics.

LO2 Analyse and solve the state of stress and strain in elastic structural members under various loading conditions.

LO3 Analyze and determine the principle stresses for plane stress problem due to combine loading.

SYNOPSIS

Introduction to various types of structures and type of supports. Concepts of stress, strain, shear force and bending moment. Theory on torsion. Pure bending on a structure. Combination of loads. Transformation of stress.

REFERENCES

BMCG 2613: FLUID MECHANICS I

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Define and describe the basic concepts and fundamental principles of fluid mechanics.
LO2 Apply fluid mechanics equations in solving fluid mechanics problem.
LO3 Analyse the fluid mechanics concepts in solving fluid mechanics problem.

SYNOPSIS

The introduction to the basic physical properties of fluids. Definition of pressure and head. Derivation of hydrostatic equation and its application in pressure measurement, static forces analysis on immersed surface and buoyancy analysis. The introduction to fluid dynamics and fluid flow analysis. Derivation of flow equations. The application of energy equation and Bernoulli equation in the calculation of flow velocity, discharge, and head lost in piping systems. Dimensional analysis and its application.

BMCG 2011: MECHANICAL ENGINEERING LABORATORY II

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.
LO2 Plan, design and conduct experiments to prove a proposed

hypothesis out of a given real and practical engineering problem.

LO3 Write a well organised, sensible and readable technical reports.

SYNOPSIS

Introduction to safety procedures in a laboratory. Hypothesis formulation. Design of experiments. Data Analysis. Use of graphical presentation techniques for experimental data. Error and uncertainty. Measurement Accuracy and Precision. Statistical analysis. Good laboratory report writing.

The experiments will be conducted in mechanical engineering laboratories that study fundamental engineering concepts in thermodynamics, fluid mechanics, solid mechanics and mechanical design.

c. Holman, J.P. 2001. *Experimental Methods for Engineers*. 7th Ed., McGraw Hill.

BMCG 3113: SOLID MECHANICS II

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Analyze plane-strain problems, strain measurements, stress-strain for pressure vessels and finally apply yield criteria to avoid elastic failure or yielding.

LO2 Analyze and solve the deformation of structural members based on double integration and energy methods.

LO3 Evaluate and solve buckling problem of structural members under compressive axial load and plastic collapse of mechanical members due to various loading conditions.

SYNOPSIS

Transformation of plane-strain and measurements of strain. Pressure vessels: thin, thick and compound cylinders. Yield criteria for ductile and brittle materials. Deflection of beams. Strain energy: Energy concept and Castigliano's theorem. Column: instability and Euler's buckling load. Plastic deformation due to bending and torsional loadings.

BMCG 2513: COMPUTER AIDED DESIGN AND MANUFACTURING

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Acquire and apply fundamental sketching and feature modeling, build feature based models of parts and assemblies for easy editing.
LO2 Produce document design intent of parts and assemblies in manufacturing drawings.
LO3 Design and develop products effectively through the applications of engineering design methodology.

SYNOPSIS

This course will empower the students with fundamental knowledge and technical skills of 3D solid modeling skills using industry-proven 3D mechanical CAD/CAM software. The students will learn about theory of CAD/CAM systems, the different techniques for creating sketches, solid models, assemblies and CAM operations with emphasis on design intent. The course includes hands-on exercises and best practice methods for students to interpret common error messages during part, assembly, drafting stages and machining stages.

YEAR 3 COURSES UNIVERSITY COMPULSORY

BLLW 3162: ENGLISH FOR PROFESSIONAL INTERACTION

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Apply the concepts of data description, normal and sampling

distributions, estimation and hypothesis testing, ANOVA, regression and non-parametric tests to solve mathematical problems.

LO2 Analyze engineering data using descriptive statistics.

LO3 Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression.

SYNOPSIS

This course which is designed based on a blended and student-centred learning approach aims to develop students' listening skills as well as communication skills and strategies. Among the elements covered are professional interactions that include group discussion and public speaking. Students are also required to express ideas with relevant examples in public speaking and online assessments. They are also exposed to the rudiments of grammar implicitly via the communicative activities.

YEAR 3 COURSES - COMMON CORE

BITG 1233: COMPUTER PROGRAMMING

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Describe the fundamental principles of problem solving, programming techniques and structures in program development.

LO2 Explain problems and their solutions based on the principles of problem solving and programming techniques.

LO3 Trace and debug in troubleshooting program applications.

LO4 Construct computer program codes by applying suitable programming structures and techniques.

SYNOPSIS

This course covers the introductory topics in programming using C++ language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

BMFG 4623: ENGINEERING MANAGEMENT AND ECONOMY

LEARNING OUTCOMES

At the end of this course, student should be able to:

LO1 Explain the principles and terminology of engineering economy, concepts of time value of money, and risk planning.
LO2 Apply the concepts, principle and techniques in project management and engineering economy.
LO3 Generate a comprehensive & viable Project Proposal and justify by a presentation in group discussion session.
LO4 Evaluate and select between alternatives using suitable methods such as Present Worth, Future Worth, Annual Worth Analysis; Breakeven & Payback Analysis.

SYNOPSIS

This course covers engineering economics and managing risk in an organization. Engineering economics discusses about the time value of money and interest relationships, which are useful to define certain project criteria that are utilised by engineers and project managers to select the best economic choice among several alternatives. Projects examined will include both product and service-producing investments. The effects of escalation, inflation, and taxes on the economic analysis of alternatives are also discussed.

Management of risk incorporates the concepts of probability and statistics in the evaluation of alternatives. This allows management to determine the probability of success or failure of the project.

BMCU 3935: INDUSTRIAL TRAINING

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply appropriate techniques and technical knowledge which relevant for student field of study.

LO2 Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.

LO3 Display soft skill especially communication skill at all level.

LO4 Work effectively as an individual, team members and as a leader as well.

LO5 Acquire new knowledge, life-long learning and aware to new technology.

SYNOPSIS

Students in third year are required to undergo industrial training for a minimum of 10 weeks at the designated organisation. During the industrial training, students are given continuous supervision by an industrial supervisor as well as supervisor appointed by the faculty. Daily activities throughout the industrial training must be recorded in a e-logbook provided by the faculty, which will be evaluated by the supervisors. Five credit-hours are given for this industrial training. Students must show satisfactory attendance and discipline in order to pass this course. The faculty' supervisor may visit the students during the training period.

YEAR 3 COURSES - PROGRAMME CORE

BMCG 2212: MICROPROCESSOR TECHNOLOGY

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the architectures of microprocessor technology and its components.

LO2 Characterize functions of microprocessor and the peripheral devices.

LO3 Design applications for the simple problems in the field of control of processes and machines using microprocessor technology.

SYNOPSIS

Introduction and examples of practical utilizations in the field of control systems, data acquisition and communication using microprocessor technology. Explanation of basic terms (memory, bit, byte, word, address, bus, microprocessor, microcomputer, register, instruction, instruction set, program, stack, arithmetical/logical unit) and basic principles of the program execution (interrupt and timer/counter). Combinational and sequential logic gate. Computer number system. Principles of the function and utilization of the input/output ports as general digital inputs and output for switches, sensors, LED indicators, alphanumeric LCD, DC and stepper motors. Utilization of A/D converter and serial communication interface for real application.

BMCG 3223: CONTROL ENGINEERING

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Derive mathematical model and obtain transfer function of dynamic systems.

LO2 Explain stability of control system using standard techniques in times domain and analyze the time response of the system.

LO3 Utilize frequency response techniques and its relative stability to control the dynamic systems.

SYNOPSIS

Introduction to open loop and closed-loop control systems. Modeling of real system using differential equations to obtain the transfer function of dynamic systems and utilization of block diagrams for the closed-loop control system. Analysis of system for stability in time and frequency domains, final value, steady-state error, overshoot and settling time. Application of controller such as, P, PI and PID algorithms to achieve the desired system response.

BMCG 3713: THERMODYNAMICS II

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply the principles of thermodynamics (the first and the second laws of thermodynamics) to the optimal design of the basic energy conversion systems: power generation, refrigeration and air-condition.

LO2 Analyze energy conversion systems in the course of their operation, engineering design quantities and their effects on the basic performance characteristics.

LO3 Design the basic energy conversion systems, select working fluids and estimate the system efficiency.

SYNOPSIS

Thermodynamics II is a continuation of Thermodynamics I (BMCG 2713). Thermodynamics principles are applied to the analysis of power generation, refrigeration and air-conditioning systems. Energy and availability analysis (exergy), moist air properties and psychrometric chart and analysis are discussed in this course.

BMCG 3613: FLUID MECHANICS II

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Understand and apply the principles of fluid mechanics (Fluid kinematics and fluid dynamics, boundary layer theory, turbomachinery and similitude) to engineering problems

LO2 Analyze and evaluate the flow system (wall bounded, internal and external flow and turbomachinery) for discerning its characteristic and/or performance

LO3 Evaluate the flow system (wall bounded, internal and external flow and turbomachinery) for engineering application

SYNOPSIS

Introduction to the concept of fluid flow. Two dimensional ideal fluid flows. Viscous flow field and differential analysis of fluid motion. Vortex and Drag. Boundary layer theory, Von Karman Equation, Prandtl-Blasius solution. Dimensional Analysis and similarity. Working concepts and performance prediction of some fluid machineries such as pumps and turbines. Fundamental introduction of Computational Fluid Dynamics (CFD).

BMCG 4113: FINITE ELEMENT ANALYSIS

LEARNING OUTCOMES

At the end of this course, the student should be able to:

a. Describe appropriately the concept of finite elements method.
b. Develop finite elements model related to engineering problem analysis and solve it using finite

elements modeler and analysis ANSYS software.

c. Analyse successfully complex problem to illustrate application of the method and write a report based on analysis of the result obtained.

SYNOPSIS

The purpose of this course is to expose the practice of structural analysis in engineering using finite elements. Introduction to finite elements method and understanding of direct method for 1-D elements including bar and beam elements. Understanding of formulation/variational methods including Potential Energy and Galerkin methods. Hands-on ANSYS software in order to build finite element model to solve the problems of linear statics analysis.

BMCG 3313: ENGINEERING DESIGN

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain and apply an appropriate design method at the particular design phase in the course of developing a practical solution of an engineering design problem.

LO2 Develop a practical design solution through a systematic investigation of the engineering design problem.

LO3 Communicate effectively in written, oral and visual means in a technical setting.

SYNOPSIS

This course covers Engineering Design process started from problems analysis, Formulating Design problems, Concept Design, Configuration Design, Parametric Design, Detail Design and Prototypes Development. Suitable methods such as QFD, Weighted Objective Method will be used at the particular design stage. Engineering Economics aspect of product, human factor, ethic and safety in design is included. Design for Manufacture and

Assembly (DFMA) is a part of this course. In addition students are required to carry out teamwork project and communicate effectively in written and oral in the technical setting.

BMCG 4743: HEAT TRANSFER

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Solve problems on steady state and unsteady state on one dimension and multiple dimension heat transfer.
LO2 Determine the heat transfer coefficient for natural or forced convection in dimensionless parameter in thermal system.
LO3 Determine of energy exchanges between black and grey surfaces at different temperatures.

SYNOPSIS

Introduction to heat transfer, steady state conduction-one dimension and multiple dimensions, unsteady state conduction. Numerical analysis for solving heat transfer problems, forced convection in laminar and turbulent flow on plate and pipe, natural convection, phase changes of heat transfer, thermal radiation on black body and surface, and boiling and condensation

BMCG 3333: MECHANICAL DESIGN

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply the formulation for optimized and safe design based on engineering standard.
LO2 Analyze the statics and dynamics of mechanical systems design
LO3 Evaluate mechanical design system in solving complex engineering problem.

SYNOPSIS

This course covers a brief review of the Engineering Design Process, Design for Static Strength, Design for Fatigue Strength, Linkage Mechanisms and the Applications of Springs and Brakes, Design of Threaded and Welded Joints, Bearings and Shafts Design and Balancing, the Basics of Gyroscopes, Gear Strength for Power Transmission,as well as the Belt and Chain for Flexible Power Transmission.

BMCG 3011: MECHANICAL ENGINEERING LABORATORY III

LEARNING OUTCOME

At the end of this course, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.

LO2 Plan, design and conduct experiments to prove a proposed hypothesis out of a given real and practical engineering problem.

LO3 Write a well organised, sensible and readable technical reports.

SYNOPSIS

Introduction to safety procedures in a laboratory. Hypothesis formulation. Design of experiments. Data analysis. Use of graphical presentation techniques for experimental data. Error and uncertainty. Measurement accuracy and precision. Statistical analysis. Good laboratory report writing.

The experiments will be conducted in mechanical engineering laboratories that study fundamental engineering concepts in:-

A) THERMODYNAMICS
   i) Air-conditioning
   ii) Cooling Tower
B) FLUID MECHANICS
   i) Aerodynamic of common geometry
   ii) Drag Measurement
   iii) Pump Performance Test
C) SOLID MECHANICS
   i) Thin & Thick Cylinder
   ii) Curve & Davit Test

YEAR 4 COURSES - UNIVERSITY COMPULSORY

BTMW 4012: ENTREPRENEURSHIP TECHNOLOGY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply the concept and importance of entrepreneurship to real world situation.
LO2 Demonstrate the techniques in digital entrepreneurship practiced by entrepreneurs to market a business.
LO3 Choose suitable business idea and process in developing a business plan for a small business.

SYNOPSIS

The course provides students with technological knowledge about entrepreneurship as well as the skills to turn such knowledge into practice. The teaching and learning (T&L) activities include case study and field work with the aim to inculcate entrepreneurship values and entrepreneurship acculturation with a view to successfully launch and subsequently manage their enterprises. Students will be exposed with the support systems available or government agencies in starting new ventures, including the tactics commonly employed by entrepreneurs starting a business. The course allows students to critically evaluate business in terms of technical feasibility, investment potential, and risks.

YEAR 4 COURSES - COMMON CORE

BMCU 4972: FINAL YEAR PROJECT I

LEARNING OUTCOMES

After completing the course, students should be able to:

LO1 Formulate a problem statement and design a project methodology to fulfill objecives of the project.

LO2 Conduct initial measurements and/or predictive studies to meet objectives of the project.

LO3 Conduct initial experiments and/or numerical studies to meet the project objectives.

LO4 Present the results in written and oral format.

SYNOPSIS

The student needs to plan and implement the project individually that related to the mechanical engineering field. It covers problem statement, literature review, methodology to overcome the problem. The student needs to achieve the objective of the project and presented it in the report.

BMCU 3013: INTEGRATED DESIGN PROJECT

LEARNING OUTCOMES

At the end of this course, the student should be able to:

LO1 Design solution by synthesizing mechanical engineering knowledge that will solve complex mechanical engineering problem in accordance withrelevant standards.

LO2 Utilize modern engineering and IT tools in facilitatingsolutions to complex mechanical engineering problems with an understanding of the limitations.

LO3 Evaluate the impact of the design product, component or processes in term of safety, environmental and sustainability factors.

LO4 Demonstrate effectively teamwork skill in completing the IDP.

LO5 Apply project management and financial knowledge effectively in completing the IDP.

SYNOPSIS

Integrated Design Project is a course where students have to design a mechanical engineering project, including project management, project planning, project feasibility study, design selection, design costing and sizing, analysis and evaluation. The course focuses on the implementation and integration of product/conceptual design development to produce a

comprehensive final technical report, including engineering proposals and drawings, specifications and bills of quantities, cost estimates of development projects given to students, working in groups. Apart from basic mechanical design, students are also required to integrate their knowledge of other engineering disciplines such as (but not limited to) structural analysis and design, including material selections, project scheduling techniques and sustainable development considerations into their overall project work. At the end of this course, the students will be able to comprehend the needs and requirements for product design procedures and are able to appreciate the importance of integration and synthesis of various disciplines of mechanical engineering knowledge.

BMCU 4984: FINAL YEAR PROJECT II

LEARNING OUTCOMES

At the end of this course, students will be able to:

LO1 Carry out project management based on the principle of engineering.
LO2 Conduct initial measurements and/or predictive studies to meet objectives of the project.
LO3 Analyze data and interpret results.
LO4 Present a full project report in written and oral forms.

SYNOPSIS

The student needs to plan and implement the project individually that related to the mechanical engineering field. It covers problem statement, literature review, methodology to overcome the problem. The student needs to achieve the objective of the project and presented it in the report.

BMCU 4022: ENGINEER AND SOCIETY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply ethical principles and commitment, to professional ethics, responsibilities, and norms of engineering practice.

LO2 Apply reasoning informed by contextual knowledge to assess health, safety, and legal issues and its subsequent responsibilities, relevant to professional practice.

LO3 Understand the needs for sustainable development and the impact of engineering solutions on society and the environment.

SYNOPSIS

Role of engineer in Nation Building, evaluation of engineering, National development Role of engineers in society, laws related to public safety, health & welfare, future engineers, professionalism and codes of ethics, definition of professionalism, understanding engineering as a profession, ethical theories, IEM and BEM code of ethics. Ethical problem solving techniques analysis of issues in ethical problems, line drawing, flow charting, learn to handle conflicting problems, application in bribery and accepting gifts situation. Ethics practice in Occupational Safety and Health at work. Rights and responsibilities of engineers. Quality from engineering perspective. Carrier guidance and project management.

BMCU 4011: ENGINEERING SEMINAR

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify the professional engineering knowledge, practices and responsibilities.

LO2 Collect and sort relevant information with regards to the given technical talk.

LO1 Discuss current engineering issues and practices that impacts engineering professionals.

SYNOPSIS

A series of technical talks will be organised and the attendance is compulsory. The technical talks will dwell on engineering profession that relates to the technology advancement, economy issues, technopreneurship, environment, sustainability and safety aspects. Reflection of the seminar will be discussed in a forum and short report will be produced by the students.

YEAR 4 COURSES – PROGRAMME CORE

BMCG 4812: SUSTAINABILITY AND ENVIRONMENT

LEARNING OUTCOMES:

At the end of the course, students should be able to:

LO1 Explain the impact of pollution and climate changes towards the environment.

LO2 Apply the concept of sustainable development in engineering design, manufacturing and technologies abide with the current national laws, regulations and policies.

LO3 Demonstrate sustainability in solving complex engineering problems to achieve Sustainable Development Goals (SDGs).

SYPNOPSIS:

This course is an introductory course on sustainability and environment. It focuses on five main elements for sustainability; Water, Energy, Health, Agriculture and Biodiversity. Sustainable development and its application in Malaysia in relation to the National Environmental Policy and Green Technology Policy are highlighted. Assessment tools such as Life Cycle Assessment, Carbon Footprint and Cleaner Production abide with the latest guideline, policies, laws and regulation. The application of engineering design, manufacturing and technologies towards sustainability and environment will be discussed.

BMCG 3233: MECHANICAL VIBRATION

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1. Apply the fundamental principles of vibration of one-and two-degree-of-freedom systems in engineering practice.
LO2. Solve the natural frequencies and mode shapes of a vibrating system.
LO3. Design techniques of vibration control.

SYNOPSIS

Fundamental of vibration. One-degree-of-freedom system: free vibration of an undamped and damped systems. Harmonically excited vibration: forced undamped and damped systems; unbalance rotating mass; base excitation. Two-degree-of-freedom system: natural frequencies and mode shapes. Continuous structures: beam, string and plates. Design of vibration suppression: vibration isolation and vibration absorber.

YEAR 4 COURSES – PROGRAMME ELECTIVE

BMCG 4713: RENEWABLE ENERGY SYSTEM

LEARNING OUTCOMES

At the end of this course the students should be able to:

LO1 Identify the sources of renewable energy, its technology and applications.
LO2 Analyze the potential for the renewable energy systems.
LO3 Evaluate the technoeconomics of stand-alone renewable energy hybrid system based on consumption data, local weather and current technology.

SYNOPSIS

Introduction to renewable energy. Solar photovoltaics, solar thermal systems, wind power, wave and tidal power, hydroelectric, biofuels, biomass, geothermal and ground-source heat pump, hydrogen and fuel cells.

REFERENCES

a. Boyle, G., 2012, *Renewable Energy: Power for a Sustainable Future*, 3rd Edition Oxford, University Press.

c. Da Rosa, A.V., 2012, *Fundamentals of Renewable Energy Processes*, 3rd Edition, Academic Press.

BMCG 4723: REFRIGERATION AND AIR CONDITIONING SYSTEM

LEARNING OUTCOMES

At the end of this course, the students should be able to:

LO1 Design the vapor compression and vapor absorption refrigeration systems and estimate system performance.
LO2 List and discuss the relevancy of the working fluids such as steam and refrigerants (natural or otherwise) that are available and applied in the respective industries.
LO3 Design an air conditioning system using basic psychrometric theory that meet the internal thermal and thermal comfort requirements leading to building cooling load estimation and selection of ducting system.

SYNOPSIS

Introduction to the underlying thermodynamics principles, refrigeration system and air conditioning system. Carnot cycle and thermodynamics properties phase diagrams such as *p-h*, *T-s* and *p-v*. Vapour compression and absorption refrigeration systems. Types and use of refrigerants in the heating, ventilating and air conditioning (HVAC) system. Effect of green-house gases to the environmental sustainability. Psychrometric principles and thermal processes related to the HVAC. Interior design and thermal comfort configuration for domestic and industrial

buildings. Cooling load estimation and ducting design for ventilation.

BMCG 4733: POWERPLANT SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Analyze the performance of different cycles and component for power generation plant.
LO2 Analyze the performance of different combustion system using different fuel source.
LO3 Evaluate the power plant system and cooling tower performance.

SYNOPSIS

The course will involve the studies on the Thermodynamics review, Rankine Cycles, Fossil-Fuel Steam Generator, Fuels and Combustion, Turbines, Condensate Feedwater System, Circulating Water System, Gas Turbines, Nuclear Energy, Reactors, Powerplant and Power Generation Influence on the Environment.

REFERENCES

a. Kiameh, P., 2011, Power Plant Equipment Operation and Maintenance Guide, McGraw Hill.

BMCG 4613: COMPUTATIONAL FLUID DYNAMICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 To explain the concept of major theories, approaches and methodologies used in CFD.
LO2 To conduct the actual implementation of CFD methods in using commercial CFD codes.
LO3 To interpret and present the results in an appropriate professional context.

SYNOPSIS

This course aims to introduce students with the basic steps and terminology that are associated with Computational Fluid Dynamics (CFD). Throughout the course, the students will learn the technique of

obtaining the solution to fluid flow problems using theoretical concept and computational software. Historical development, philosophy and the significance of CFD are covered along with the governing equations of fluid dynamics. Other topics will also include the derivation of finite difference approximations to derivatives, discretizations and introduction to turbulence modelling.

BMCG 4623: FLUID POWER AND TURBOMACHINERY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply fluid power and turbomachinery knowledge to solve engineering problems.

LO2 Analyze the performance of fluid power and turbomachinery system.

LO3 Gain and latest advanced knowledge of fluid power and turbomachinery technolog.

SYNOPSIS

The turbomachinery section covers classification of different types of turbomachines, basic relations of velocity diagrams, mass flow rates, energy and momentum equations for axial flow gas turbines and compressors. However, the Fluid Power section covers the introduction of the hydraulic and pneumatic systems, components and their working principles and performance. Furthermore, the level of understanding is enhanced to the system ancillaries, sensors, fluid power circuit design, and analysis and control. The computer software is used to design and simulate the fluid power application.

BMCG 4123: ADVANCED SOLID MECHANICS

LEARNING OUTCOMES

At the end of this course the student should be able to:

LO1 Analyse and determine shear centre and stresses of structures due to unsymmetrical bending and torsional load.
LO2 Analyse and determine principal stresses by using imaging technique.
LO3 Analyse and evaluate the contact stresses due to contact between curved surfaces.

SYNOPSIS

Unsymmetrical bending theory, stresses in curved beams, shear centre and stress, torsion for open and closed cells thin-walled, photoelasticity, stresses in circular and square plate, and contact stresses.

BMCG 4133: FRACTURE MECHANICS

LEARNING OUTCOMES

LO1 Define the fracture mechanics and describe fracture mechanisms of materials and explain why structures fail by giving examples of structural failures occurred for the last few decades and recent years.
LO2 Define and differentiate the differences between stress concentration factor (SCF) and stress intensity factor (SIF) and explain how these parameters may be determined by using various methods and its relation with the KIC of the material.
LO3 Determine, analyze and validate (or verify) data of fracture toughness of materials by using LEFM (Linear Elastic Fracture Mechanics) and EPFM (Elastic Plastic Fracture Mechanics) concepts.

LO4 Apply fracture criteria into structural design and determine fatigue life of engineering structures or components by using fracture mechanics approaches (either based on LEFM or EPFM concepts).

LO5 Examine and evaluate the fatigue phenomena of metallic materials and carry-out failure analysis (life prediction) by using stress-based and strain-based approaches.

SYNOPSIS

Introduction to the subject of fracture mechanics and provides history and overview, Fundamental concepts of linear elastics and elastic-plastic fracture mechanics (LEFM and EPFM), Fracture toughness testing, Fatigue crack threshold and propagation equations, and Fatigue behaviour and failure analysis of metallic materials based on Stress-based and Strain-based approaches.

BMCG 4413: NON DESTRUCTIVE TESTING

LEARNING OUTCOMES

At the end of the course, the student should be able to:

LO1 Explain the current basic and some advanced principles of Non-Destructive Testing (NDT) techniques to satisfy complex engineering problems.

LO2 Recognize clearly the parameters that affect the sensitivity, reliability of the NDT techniques together with its strength and limitations in accordance to applicable standards.

LO3 Select the appropriate NDT methods in relation with industrial problem.

SYNOPSIS

This course is intended to introduce the Structural Health Monitoring (SHM) Systems and Technologies. It covers the system methodology that includes system components, data acquisition; the sensory

technology; the SHM testing categories such as static field test, dynamic field test and etc; the SHM system design; vibration-based techniques for SHM; and case studies.

BMCG 4423: COMPOSITES AND ADVANCED MATERIALS

LEARNING OUTCOMES

At the end of the course, the student should be able to:

LO1 Explain the characteristics of materials that determine their properties.

LO2 Identify various classes of composites and advanced materials and their processing, properties and applications.

LO3 Apply the information provided in the course to properly identify, characterize, and select materials that satisfy a set of requirements.

SYNOPSIS

This course introduces students to composites and advanced materials in general, with the focus on their classifications, basic constituents, processing and applications. In addition, knowledge on the mechanical testing of fibre reinforced composites is included. This course also emphasizes on specific advanced materials including nanomaterials, biomaterials, surface engineering and powder metallurgy. The course also introduces some of the fundamental concepts in selecting and designing with composites and advanced materials in various engineering applications.

BMCG 4433: METALLURGY

LEARNING OUTCOMES

At the end of the course, the student should be able to:

LO1 Explain clearly the structure, physical and mechanical behaviour of the metallic materials.

LO2 Describe properly the formation, fabrication and solidifications process, plastic deformation, strengthening mechanism, principle of recovery, recrystallization and grain growth.

LO3 Correlate the composition, microstructure and heat treatment processes by interpretation of Ferum-Carbide phase diagrams and transformation diagrams system appropriately of metallic materials.

SYNOPSIS

Physical metallurgy: crystal structure and properties of pure metals, solidification; strengthening mechanisms; recovery, recrystallization and grain growth; ferum-carbide phase diagram; TTT diagrams; heat treatment of steel; non-ferrous metals and its alloy; heat treatment of non-ferrous metals; properties of metallic materials and its alloy, corrosion and prevention of metallic materials .

Mechanical metallurgy: stress and strain; elastic behavior; theory of elasticity; true stress and true strain; effect of heat/temperature on strain rate and stress flow; metallurgy structure; mechanic testing for metallic materials for stress, hardness, impact and creep; fundamental of mechanical working for metallic materials.

BMCG 4313: MECHANISM DESIGN

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the concept and the process of designing a mechanism system.

LO2 Analyze the motion characteristics of the machine analytically, graphically or computationally.

LO3 Synthesize mechanisms according to motion requirement.

SYNOPSIS

This course is to introduce the principles of designing mechanisms, aided by the use of computer applications. Students will investigate the kinematics and dynamics of machineries. Topics include cam and cam follower design, gear kinematic analysis, and linkage synthesis.

BMCG 4323: RAPID PROTOTYPING TECHNOLOGY

LEARNING OUTCOMES

At the end of this course, the students should be able to:

LO1 Explain the the contemporary issues of prototype development technology.
LO2 Apply suitable technology for prototype and product development.
LO3 Demonstrate the engineering and basic management knowledge related to prototype and product development.

SYNOPSIS

This course introduces essential tools and techniques in concurrent product and process development. It explains and discusses the functions and roles of time compression technologies such as rapid prototyping, CAD, and reverse engineering within product development. Comparison between additive and subtractive layer manufacturing is included. An overview of several RP, RE, and CAD systems current application and future trends are also discussed. The application of solid modeling and surface modeling, together with STL file generation in component design is analyzed. Reverse engineering systems, rapid tooling and rapid manufacturing techniques are compared and discussed.

BMCG 4333: DESIGN QUALITY AND RELIABILITY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify and recognize the essential techniques to assess and improve process and/or product quality and reliability.

LO2 Develop and evaluate the quality and reliability issues through Total Quality Management and Reliability model.

LO3 Analyze and develop the basic concepts and techniques of modern reliability engineering tools.

SYNOPSIS

This course introduces essential techniques in quality and reliability issues in design. The students will be exposed to the Total Quality Management concept, application of quality function deployment, design of experiment (Taguchi method) for product and process design. It also covers topics such as product reliability, application of fault tree analysis, failure distribution method and reliability prediction analysis.

BMCG 4343: DESIGN OPTIMIZATION

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Understand and formulate optimization problems in engineering design.

LO2 Apply an engineering package to optimize the design.

LO3 Explore optimization cases in industry.

SYNOPSIS

This course covers mathematical modeling of engineering design problems for optimization. Boundedness and monotonicity analysis of models. Differential optimization theory for unconstrained and constrained problems, and selected numerical algorithms for continuous nonlinear models. Emphasis on the interaction between proper modeling and computation. Students propose design term projects from various disciplines and apply course methodology to optimize designs.

BMCG 4513: ADVANCED COMPUTER AIDED DESIGN

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Understand and apply the fundamentals of surface modeling in CAD using the tools and workbenches studied in the class in relation to the design and automotive industries.

LO2 Develop 3D surface models in the process of concept design generation and also for the engineering design detail data development.

LO3 Analyze the surface modeling data using the surface analysis tools for further engineering design and development process.

SYNOPSIS

This course will empower the students with fundamental knowledge and technical skills of 3D surface modeling skills using industry-proven 3D mechanical CAD software. The students will learn about the different techniques for creating surface models with emphasis on design intent. Other topics include surface analysis, A-class surface, generation of complex shape, surface requirement in mechanical applications.

BMCG 4213: VIBRATION MONITORING OF ROTATING MACHINERY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the principle of vibration measurement, signal processing and the standards used in rotating machineries fault diagnosis.
LO2 Classify the fault criteria in rotating machineries.
LO3 Diagnose and justify the type of faults.

SYNOPSIS

The course emphasizes on the basic vibration measurement involving rotating machineries. It covers the basic signal processing especially relating to the time domain and frequency domain analyses. Several fault diagnosis involving unbalance, alignment, looseness, rolling element bearing analysis, gearbox analysis, pumps, fans and compressors are covered in the course. The course also highlights the right way to the vibration analysis process and the setting of alarm limits. Several related ISO standards are also briefly introduced.

BMCG 4813: CONDITION BASED MAINTENANCE

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Differentiate different maintenance strategies.
LO2 Describe the fundamental aspect of each condition monitoring technologies including operating and measurement principle.
LO3 Apply the monitoring technologies to diagnose the machinery faults by means of field measurement or data interpretation.

SYNOPSIS

This course introduces the maintenance philosophy in general and focuses more on the philosophy of the condition based maintenance. It also covers the basic

techniques used in condition monitoring such as vibration analysis, oil and wear debris analysis, thermography and ultrasonic techniques. By introducing these common techniques, students are exposed on how to decide the best diagnosis method to determine the faults. Sometime, one technique may not be able to determine the faults and requires integrated condition monitoring which involves various techniques.

BMCG 4823: RELIABILITY, MAINTAINABILITY AND RISKS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Analyze the failure and reliabilty of equipment or component by using statistical method.
LO2 Determine the maintainability of equipment.
LO3 Determine the plant safety system.

SYNOPSIS

The course provides knowledges in analyzing the reliability of machine and component. Generate failure statistic of machine or components. . Decision making analysis (Pareto and trend analysis). Analysis and assessment of component reliability (Weibull distribution and graphic analysis). Maintainability analysis and Fault tree analysis, for safety risk assessment which include : (a) symbols and construction, (b) minimum cut sets, (c) top event quantification, (d) importance measures. The Reliability Block Diagram (RDB): representation and assessment of the reliability of simple configurations. Maintainability analysis. Estimating system repair times.

BMCG 4833: WEAR DEBRIS AND OIL ANALYSIS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Conduct analysis of lubrication and machinery deterioration using wear debris and oil analysis.

LO2 Investigate machinery lubrication problem using wear debris and oil analysis to predict machinery failure.

LO3 Select appropriate technique in wear debris and oil analysis indiagnosis the lubrication and machinery problem.

SYNOPSIS

The course provides knowledge in lubrication fundamentals, lubricant additive properties, lubricant perfomance properties, and deteriotation condition due to the process. It focuses on condition monitoring techniques using wear debris and oil analysis. The technique enables the prediction of machine deterioration through wear particle counts, particle shape analysis, quantity analysis and surface condition of particles. In addition, oil analysis is capable of giving the condition of lubricants being used in the machine and components such as gearboxes and bearing. The status of the additives of the lubricants can also be determined in order to know the deterioration performance of the lubricants. Through contamination analysis, the source of the contaminants can be detected in order to ensure the rate of contamination can be controlled and eliminated. Through the combined analysis, decision can be made on the next course of actions to be taken on the analyzed machine component. This course will extend to cover the best practice technique of lubricant management.

BMCG 4843: STRUCTURAL HEALTH MONITORING

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe fundamental principles of current state of SHM process and technology.
LO2 Assess structural integrity loss of mechanical structure.
LO3 Suggest the best SHM strategy to sustain mechanical structures.

SYNOPSIS

This course is intended to introduce the Structural Health Monitoring (SHM) Systems and Technologies. It covers the system methodology that includes system components, data acquisition; the sensory technology; the SHM testing categories such as static field test, dynamic field test and etc; the SHM system design; vibration-based techniques for SHM; and case studies.

LANGUAGE ELECTIVE COURSES

BLLW 1222: MANDARIN LANGUAGE I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Demonstrate the ability to converse in basic Mandarin with correct and accurate pronunciation.
LO2 Identify basic vocabulary and sentence patterns.
LO3 Interpret the information in the simple text and construct sentences with correct grammar.

SYNOPSIS

This subject is designed for students who do not have prior knowledge in Mandarin. It provides students with the foundation of knowledge to enable them to understand and respond in the oral and written forms. This subject encompasses the listening, speaking, reading and writing components. This subject aims to help students to obtain enough exposure of the Mandarin phonetics (Han Yu Pin Yin). The basic grammar introduced is related to the language used daily by the Chinese. Particular care is also taken to ensure the development of verbal communication and written skills in Mandarin.

BLLW 1242: KOREAN LANGUAGE I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Identify Hangeul (Korean alphabet) and read in Korean language.
LO2 Interpret the information in the simple text and construct sentences with correct grammar.
LO3 Demonstrate basic conversation in Korean with correct pronunciation.

SYNOPSIS

This subject is designed for students who do not have prior knowledge in Korean. It provides students with the foundation of knowledge to enable them to understand and respond in the oral and written forms. This subject encompasses the listening, speaking, reading and writing components. This subject aims to help students to obtain basic knowledge about Korean language. The basic grammar introduced is related to the language used daily by the Korean. Particular care is also taken to ensure the development of verbal communication and written skills in Korean.

BLLW1212: ARABIC LANGUAGE I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Demonstrate the ability to converse in Arabic with correct and accurate pronunciation and respond to it accordingly.

LO2 Identify basic vocabulary and demonstrate writing skills.

LO3 Interpret the information in the simple text and construct sentences with correct grammar.

SYNOPSIS

This subject is designed for students who do not have prior knowledge in Arabic. It provides students with the foundation of knowledge to enable them to understand and respond in the oral and written forms. This subject encompasses the listening, speaking, reading and writing components. This subject aims to help students to obtain enough exposure of the Arabic language skills. The basic grammar introduced is related to the language used daily in conversation. Particular care is also taken to ensure the development of verbal communication and written skills in Arabic.

BLLW 1252: GERMAN LANGUAGE I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Demonstrate the ability to converse in German with correct and accurate pronunciation and respond to it accordingly.

LO2 Identify basic vocabulary and demonstrate writing skills.

LO3 Interpret the information in the simple text and construct sentences with correct grammar.

SYNOPSIS

This subject is designed for students who do not have prior knowledge in German. It provides students with the foundation of knowledge to enable them to understand and respond in the oral and written forms. This subject encompasses the listening, speaking, reading and writing components. This subject aims to help students to obtain basic exposure of the German phonetics. The basic grammar introduced is related to the language used daily by the German. Particular care is also taken to ensure the development of verbal communication and written skills in German.

BLLW 1232: JAPANESE LANGUAGE I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Demonstrate the ability to converse in Japanese with correct and accurate pronunciation and respond to it accordingly.

LO2 Identify basic vocabulary and demonstrate writing skills.

LO3 Interpret the information in the simple text and construct sentences with correct grammar.

SYNOPSIS

This subject is designed for students who do not have any background in Japanese. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This subject encompasses the listening, speaking, reading and writing components. The grammar introduced is related to the language used daily by the Japanese. In addition, two types of Japanese language writing systems; Hiragana and Katakana are also introduced. Students are also exposed to elementary reading materials.

BLLW 1172: COMMUNICATIVE MALAY LANGUAGE 1

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Respond to information from oral texts and face-to-face interactional activities (HPP5).

LO2 Relate the basic sounds of Bahasa Melayu in terms of grammar, phonology and oral communication skills related to oneself, family, university and daily activities.

LO3 Construct sentences and communicate well in Bahasa Melayu.

SYNOPSIS

This subject introduces the grammar of the language. Students will be exposed to the aspects of grammar, clause, terminology, sentence construction, collective nouns and literature. It is hoped that students will be able to use correct Malay grammar.

GENERAL / OPEN ELECTIVE COURSES

BIPW 3112: CRITICAL AND CREATIVE THINKING (PEMIKIRAN KRITIS DAN KREATIF)

LEARNING OUTCOMES

Pada akhir kursus ini, pelajar akan dapat:

LO1 Mengenal pasti prinsip asas kemahiran pemikiran kritis dan kreatif.

LO2 Menganalisis maklumat yang dikumpul dan dicerap untuk membuat keputusan.

LO3 Membentuk konsep atau idea penyelesaian baru.

SYNOPSIS

Kursus ini direka untuk memberi pendedahan kepada pelajar tentang prinsip-prinsip asas dalam pemikiran kritis dan kreatif. Pelajar akan mengaplikasikan kaedah pemikiran kritis dan kreatif dalam penyelesaian masalah melalui pendekatan pembelajaran berpusatkan pelajar termasuk pendekatan pembelajaran berasaskan permasalahan (PBL). Pelajar akan dipandu di dalam projek akhir di mana penganalisaan kehendak pasaran akan datang akan dilaksanakan dan cadangan penyelesaian adalah berasaskan produk keperluan pasaran dari pelbagai perspektif dan pemikiran di luar kotak (out of the box).

BIPW 4122: NEGOTIATION SKILLS (KEMAHIRAN PERUNDINGAN)

LEARNING OUTCOMES

Pada akhir mata pelajaran ini, pelajar akan dapat:

LO1 Mengenalpasti konsep-konsep asas dalam proses perundingan menggunakan amalan komunikasi berkesan.

LO2 Membuat kesimpulan terhadap teknik-teknik perundingan yang terbaik berdasarkan pendekatan teori yang pelbagai.

LO3 Menyelesaikan isu-isu perundingan berdasarkan teknik-teknik kemahiran perundingan yang berkesan berasaskan pelbagai situasi

SYNOPSIS

Kursus ini akan membincangkan konsep asas perundingan, teknik berfikiran secara kritis dan kreatif, teknik komunikasi berkesan dan teknik mendengar dan menyoal secara berkesan. Pelajar turut didedahkan dengan pengetahuan dan kemahiran yang diperlukan untuk menjalankan dan meguruskan proses perundingan pelbagai secara berkesan. Selian itu, kemahiran berfikir secara kritis dan kreatif, serta kemahiran komunikasi berkesan yang diperlukan bagi menjalankan proses perundingan juga akan dibincangkan.

BIPW 1152: INDUSTRIAL AND ORGANIZATIONAL PSYCHOLOGY (PSIKOLOGI INDUSTRI DAN ORGANISASI)

LEARNING OUTCOMES

Pada akhir kursus ini, pelajar akan dapat:

LO1 Menghubung kait proses persekitaran dan teori di tempat kerja dalam dunia organisasi dan perindustrian.

LO2 Mempamerkan ciri-ciri kepimpinan dalam aktiviti tugasan kumpulan.

LO3 Memberi tindak balas terhadap peranan dan tanggungjawab sebagai seorang bakal pekerja di dalam organisasi.

SYNOPSIS

Kursus ini memberi pendedahan kepada aspek psikologi dalam dunia pekerjaan dalam sektor industri serta permasalahan yang berhubung dengan tingkah laku dalam organisasi. Terdapat beberapa topik yang dibincangkan termasuk isu-isu semasa dalam psikologi di tempat kerja, perancangan personel, tekanan di tempat kerja dan psikologi kejuruteraan.

c. Yukl, G., 2010, Leadership in Organizations.

BIPW 4112: ORGANIZATIONAL COMMUNICATION (KOMUNIKASI KEORGANISASIAN)

LEARNING OUTCOMES

Pada akhir mata pelajaran ini, pelajar akan dapat:

LO1 Membincangkan prinsip-prinsip asas kemahiran komunikasi organisasi untuk tujuan interaksi dalam organisasi

LO2 Memberikan maklum balas mengenai isu-isu yang berkaitan dengan pembangunan kemahiran komunikasi organisasi

LO3 Menyelesaikan masalah komunikasi organisasi berdasarkan konteks persekitaran organisasi sebenar.

SYNOPSIS

Kursus ini akan mendedahkan pelajar kepada idea-idea asas organisasi dalam komunikasi umum dan organisasi. Selain itu, pelajar juga akan dapat mengetahui teori-teori yang berkaitan dengan komunikasi organisasi dan memahami elemen-elemen penting dalam organisasi seperti kepimpinan, komunikasi rasmi dan komunikasi tidak rasmi. Selain itu, pelajar akan menyedari halangan, penyelesaian masalah dan membuat keputusan kemahiran dalam komunikasi organisasi. Akhirnya, pelajar akan mempunyai pemahaman iklim organisasi, hubungan teknologi dan organisasi dan komunikasi korporat dalam organisasi

BIPW 1142: PHILOSOPHY OF SCIENCE AND TECHNOLOGY (FALSAFAH SAINS DAN TEKNOLOGI)

LEARNING OUTCOMES

Pada akhir mata pelajaran ini, pelajar akan dapat:

LO1 Menghuraikan konsep ilmu, falsafah sains dan teknologi dalam perspektif Islam secara kritis dan kreatif.

LO2 Menunjukkan perkaitan antara konsep falsafah sains dan teknologi dari perspektif Islam dan barat.

LO3 Mengaplikasikan pemahaman tentang konsep ilmu falsafah sains dan teknologi dalam kehidupan masyarakat masa kini.

SYNOPSIS

Kursus ini membincangkan tentang konsep ilmu, konsep falsafah, sains dan teknologi yang berunsurkan kreativiti dan inovasi menurut sarjana Islam dan barat. Selain itu, kursus ini juga menekankan tentang metodologi dalam

sains Islam, konsep dan pencapaian tamadun Islam dalam bidang matematik,

astronomi, fizik, kimia, perubatan, konsep penciptaan alam dan kosmologi dalam Islam, pencapaian dalam bidang telekomunikasi terkini dan isu-isu sains semasa. Pendekatan sarjana Islam silam menjadi contoh kepada generasi masa kini menjadi manusia yang kreatif dan mempunyai pemikiran kritis dalam pelbagai bidang seperti penciptaan dan kejuruteraan

BIPW 2142: INDUSTRIAL SOCIOLOGY (SOSIOLOGI INDUSTRI)

LEARNING OUTCOMES

Pada akhir mata pelajaran ini, pelajar akan dapat:

LO1 Menerangkan proses transformasi sosial masyarakat dan industri negara.

LO2 Mengenal pasti terhadap peranan dan tanggungjawab dalam pemantapan hubungan industri.

LO3 Menghubung kait dasar sosial dengan matlamat pembangunan kelestarian (SDGs).

SYNOPSIS

Kursus ini membincangkan tentang proses pembangunan sosial dan industri dalam agenda pembangunan di Malaysia. Pelajar akan didedahkan tentang teori dan model berkaitan perindustrian, strategi, dan impak pembangunan kepada ekonomi dan masyarakat. Kursus ini juga menekankan konsep dan amalan dalam hubungan industri, pasaran dan Akta Buruh, Kesatuan Sekerja dan Matlamat Pembangunan Kelestarian (SDGs). Kesedaran aspek sosiologi industri ini penting bagi memastikan Malaysia mampu menghadapi cabaran globalisasi, IR 4.o dan era ekonomi digital untuk mengekalkan kelangsungan dan daya saing negara.

BMCK 4933: VEHICLE AUTONOMOUS SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the fundamental concept and theory in autonomous vehicle as well as the features and function of sensors and actuators involved.

LO2 Create and evaluate control system for autonomous vehicle system.

LO3 Apply and analyze fundamental methods in autonomous vehicle, such as motion planning, obstacle avoidance, localization and mapping using simulation software.

SYNOPSIS

This course discusses the state of the art of autonomous systems, examines some promising autonomy technology that will be available in the near future, and identifies some shortfalls in autonomy capability that need to be alleviated. The subject goes on to explore the level of autonomy as a design choice and autonomy technologies.

YEAR 1 COURSES – UNIVERSITY COMPULSORY

BIPW 1132: PHILOSOPHY AND CURRENT ISSUES (FALSAFAH DAN ISU SEMASA)

LEARNING OUTCOMES

Pln the end of this course, the students are able to:

LO1 Explain the current issues related to philosophy, National Education Philosophy and National Ideology.

LO2 Analyze the current issues based on main scholarly thought and various philosophical theories.

LO3 Examine the current issues according to philosophical comparative studies between dialogue and culture.

SYNOPSIS

his course will discuss on the concept of knowledge, ethics and civilization which emphasize on comparative available systems, social development and multi-cross cultural activities in Malaysia. Besides, this course is stressing on current and contemporary issues discussion related to economy, politic, social, culture and environment based on ethical and civilizational approach. This course will cover the comparative system, developmental phase, social development and cross cultural activities in order to produce a man with positive values.

BKKX XXX1: CO-CURRICULUM I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Recognise a balanced and comprehensive education
LO2 Develop leadership aspects stressing on disciplines and cooperation within a group or organisaton.
LO3 Build personality and character guided by rules of conduct.
LO4 Foster cooperation and unity in multi-racial society.

BLLW 1142: ENGLISH FOR ACADEMIC PURPOSES

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Apply correct grammar rules according to context.
LO2 Demonstrate knowledge of various reading skills in the reading tasks given.

SYNOPSIS

This course aims to develop students' reading skills and grammar. A variety of academic reading texts and reading skills are explored to facilitate students' comprehension of the texts. These reading skills are also necessary in assisting students

to master study skills. Grammar elements are taught in context to develop students' accuracy in the use of the language. This course also includes elements of blended learning.

BLLW 1XX2: LANGUAGE ELECTIVE

Refer Language Elective Courses (Section 4.1)

YEAR 1 COURSES – COMMON CORE

BMFG 1313: ENGINEERING MATHEMATICS I

LEARNING OUTCOMES

Upon completion of this subject, students should be able to:

LO1 Identify the domain and range of multivariable functions.
LO2 Solve double and triple integrals using various techniques.
LO3 Apply integration techniques to solve for mass, moments and lamina.
LO4 Perform the given tasks that pertain to the engineering problems by using the knowledge of engineering mathematics.

SYNOPSIS

This course consists of three chapters: Functions of Several Variables, Multiple Integrals and Vector- valued Functions. The syllabus is developed by introducing the concepts of the functions with severable variables, integration and also vector-valued function, followed by learning various techniques in solving the problems and its application in physical and engineering fields.

BMCG 1523: ENGINEERING GRAPHICS AND CAD

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain the engineering graphics fundamentals.

LO2 Construct technical drawing using manual sketching and computer aided design.

LO3 Communicate by using engineering drawings.

SYNOPSIS

The course will provide students with an understanding of the importance of engineering graphics as a communication tool among engineers. Student will be exposed to the engineering graphics fundamentals of manual sketching, geometric dimensioning and tolerancing, graphic projections, sectioning and engineering drawings. Students will develop visualization skills by constructing technical drawings using manual sketches and computer aided design (CAD) software. The course consists of both lecture and practical session where students will be guided in presenting and interpreting engineering drawings correctly.

BMFG 1213: ENGINEERING MATERIALS

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Explain the basic concepts of engineering materials in terms of interatomic bonding and crystal structure.

LO2 Analyze the properties of engineering materials based on its structure.

LO3 Apply the basic understanding of engineering materials properties to determine their processing method.

SYNOPSIS

This course introduces basic concepts of engineering materials that covers introduction to engineering materials, interatomic bonding, crystalline structure and imperfections and diffusion in solid. Explanation on different types of engineering material (i.e. metal, ceramic, polymer and composites), its mechanical properties, basic applications and processing are also included. Introduction to the binary phase diagrams (composition and microstructure correlation) is also given.

BMCG 1013: DIFFERENTIAL EQUATIONS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the basic concept and solution of second order differential equations, Laplace transform and Fourier series.

LO2 Select an appropriate technique to solve problems involving differential equations.

LO3 Apply the concept of differential equations in solving engineering problems.

SYNOPSIS

This course is intended to introduce the concept and theories of differential equations. Second order linear differential equations with constant coefficients will be solved by using the methods of undetermined coefficient, variation of parameters and Laplace transform. Fourier series in relation to periodic functions will be discussed. An introduction to the solution and application of partial differential equations with boundary value problems using the method of separation of variables and Fourier series will also be discussed.

BITG 1233: COMPUTER PROGRAMMING

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Identify the fundamental principles of problem solving, programming techniques and structures in program development.

LO2 Practice program codes in problem solving and programming techniques to solve given problems.

LO3 Construct computer program codes by applying suitable programming structures and techniques.

SYNOPSIS

This course covers the introductory topics in programming using C++ language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

BEKG 1123: PRINCIPLES OF ELECTRIC AND ELECTRONICS

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Explain the basic principles of electrical and electronics components, terminologies, configuration, laws and rules.

LO2 Apply appropriate circuit analysis methods to solve DC (resistive) circuits problems.

LO3 Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.

LO4 Explain the operation, function and applications of the transducers/sensors.

SYNOPSIS

This course will discuss about the basic principles of electrical and electronics; Introduction to electric element, symbol and components. KCL, KVL, Node and Mesh in solving DC series and parallel circuit. Introduction in magnetism, electromagnetism and AC characteristic. Introduction to semiconductors, atomic structures, energy band, P-type and N-type. Study on structure, principle and application of diode, BJT and Op-Amp circuits.

BEKG 1233: PRINCIPLES OF MEASUREMENTS AND INSTRUMENTATION

LEARNING OUTCOMES

Upon completion of this course, students should be able to:

LO1 Describe the principle, various terms and standards in measurement.

LO2 Explain the principles of measurement devices.

LO3 Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.

LO4 Explain the operation, function and applications of transducers/sensors.

SYNOPSIS

This course discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement devices such as galvanometers, ammeters, voltmeters, wattmeter, temperature, force and torque and pressure measurement as well as

accelerometer. It also introduces oscilloscope and sensors for instrumentation application.

YEAR 1 COURSES – PROGRAMME CORE

BMCK 1113: ENGINEERING MECHANICS

LEARNING OUTCOMES

On successful completion of this course, student should be able to:

LO1 Describe and apply the basic concepts and fundamental principles of engineering mechanics.
LO2 Analyze and solve static equilibrium problems of particle and rigid body.
LO3 Analyze and solve problems on kinematics and kinetics of particle and rigid body.

SYNOPSIS

The engineering mechanics of statics and dynamics provides an introduction and the basic concept of statics as physicals sciences, system of units, scalars and vectors, free body diagram, forces and moment, particle and rigid body and structural analysis. In dynamics it provides the kinematics principle of particles and rigid bodies, concept of position, velocity and acceleration, application of Newton's second law, principle work and energy, also the impulse and momentum.

BMCG 1011: MECHANICAL ENGINEERING LABORATORY I

LEARNING OUTCOMES

At the end of the session, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.

LO2 Use basic mechanical engineering instruments to measure engineering variables pertinent to the conducted experiments

LO3 Write a well organised, sensible and readable technical reports which describe the experiment in a standard writing format

SYNOPSIS

Introduction to Science, Engineering and Technology. Introduction to safety. Ethics in laboratory. Use of scientific method. Mechanical measurement concept. Introduction to measuring devices. Basic engineering instruments. Use of instrument to measure engineering variables. Experimental report writing.

The experiments will be conducted in mechanical engineering laboratories that study fundamental engineering concepts in statics, dynamics, material sciences, measurements and instrumentation as well as engineering drawing.

c. Holman, J.P. 2001. Experimental Methods for Engineers. 7th Ed., McGraw Hill.

BMCG 2312: MANUFACTURING PROCESS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain the processes and aspects involved in manufacturing and manufacturing related activities

LO2 Discuss the manufacturing and manufacturing related activities issues on sustainability of resources and environment

LO3 Engage in the in life long learning in the context of manufacturing technology changes.

SYNOPSIS

This course covers theoretical issues of manufacturing and the quality aspects of manufacturing such as quality assurance and tolerance. The type and fundamental

principle of joining processes, metal casting processes, forming processes, shaping processes, material removal processes, modern machining processes and their equipments are also covered. The quantitative problem analysis of certain manufacturing processes is included as well. Societal and environment issue in manufacturing processes are also included. Finally the need to engage in life-long learning processes is emphasised as to ensure students alert on the manufacturing technological changes.

YEAR 2 COURSES – UNIVERSITY COMPULSORY

BIPW 2132: APPRECIATION OF ETHICS AND CIVILIZATION (PENGHAYATAN ETIKA DAN PERADABAN)*

* For Malaysian students only

LEARNING OUTCOMES

Pada akhir mata pelajaran ini, pelajar akan dapat:

LO1 Menjelaskan konsep etika daripada perspektif peradaban yang berbeza.

LO2 Membandingkan sistem, tahap perkembangan, kemajuan sosial dan kebudayaan merentas bangsa.

LO3 Membincangkan isu kontemporari berkaitan ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban.

SYNOPSIS

Kursus ini menerangkan tentang konsep etika daripada perspektif peradaban yang berbeza. la bertujuan bagi mengenal pasti sistem, tahap perkembangan, kemajuan dan kebudayaan sesuatu bangsa dalam mengukuhkan kesepaduan sosial. Selain itu, perbincangan berkaitan isu-isu kontemporari dalam aspek ekonomi, politik, sosial, budaya dan alam sekitar daripada perspektif etika dan peradaban dapat melahirkan pelajar yang bermoral dan profesional. Penerapan amalan

pendidikan berimpak tinggi (HIEPs) yang bersesuaian digunakan dalam penyampaian kursus ini. Di hujung kursus ini pelajar akan dapat menghubungkaitkan etika dan kewarganegaraan berminda sivik.

BIPW 2122: MALAYSIAN CULTURE*

* For international students only

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Discuss issues related to Malaysian culture.
LO2 Present issues related to Malaysian culture.
LO3 Reflect the scenario of cultural diversity in Malaysia.
LO4 Describe an element in Malaysian culture.

SYNOPSIS

This course exposes international students to the socio-cultural background of Malaysia which includes ethnic composition, religions, traditions and values. Other elements like music, arts, cuisine, costume, ethnic games, celebrations and national festivals are also highlighted. Student Centered Learning (SCL) methods such as group discussion and presentation will be used in order to assist international students in developing their understanding and appreciation of Malaysian culture.

BKKX XXX1: CO-CURRICULUM II

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Recognise a balanced and comprehensive education
LO2 Develop leadership aspects stressing on diciplines and cooperation within a group or organisaton.
LO3 Build personality and character guided by rules of conduct.

LO4 Foster cooperation and unity in multi-racial society.

SYNOPSIS

a. Cultural
   Choir, Gamelan, Cak Lempung, Nasyid, Seni Khat, Seni Lakon, Art, English Elocution, Bahasa Melayu Elocution, and Kompang.
b. Entrepreneurship
   Video, Film and Photography, Publishing & Journalism, Computer and Technopreneurship.
c. Society
   Fiqh Muamalat, Fiqh Amali, Tahsin Al-Quran & Yaasin and Peer Program.
d. Recreation
   Go-Kart, Adventure and Cycling.
e. Sports
   Swimming, Volley Ball, Golf, Takraw, Aerobic, Badminton, Football and Net ball.
f. Martial Arts
   Silat Gayong, Karate-Do and Taekwando.

BLLW 2152: ACADEMIC WRITING

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Prepare clear and detailed descriptions of a product related to fields of interest.

LO2 Express arguments systematically in a composition.

LO3 Prepare short reviews of technical materials.

SYNOPSIS

This course aims to equip the students with the skills to communicate clear and detailed viewpoints in writing. The students are expected to have a stand on topics of their fields by providing advantages and disadvantages to support their arguments. From time to time, consultations with the students will be conducted throughout the completion of their assignments. This serves as the formative evaluation in the course. Grammar components are embedded in the course to support the required writing skills. Blended learning is incorporated in this course.

BEKG 2443: ENGINEERING MATHEMATICS II

LEARNING OUTCOMES

Upon completion of this subject, students should be able to:

LO1 Describe the fundamental concepts of multivariable functions, multiple integrals and vector calculus.

LO2 Solve the mathematical problems that involve function of several variable, multiple integrals and vector calculus.

LO3 Apply the knowledge of advanced engineering mathematics to deal with the engineering problems.

SYNOPSIS

This course consists of three chapters: Function of Several Variables: Functions of Two or More Variables, Limit and Continuity, Partial Derivatives, Total Differential, Chain Rule, Implicit Differentiation and Local Extrema.

Multiple Integrals: Double Integral, Double Integral Over Non-rectangular Regions, Double Integral in Polar Coordinates, Triple Integral, Triple Integral in Cylindrical and Spherical Coordinates and Moment and Centre of Gravity.

Vector Calculus: Vector fields, Line integral, Green's theorem, Curl and Divergence, Parametric surfaces and their Areas, Surface integrals, Stoke's theorem and Divergence theorem.

YEAR 2 COURSES - PROGRAMME CORE

BMCK 2613: FLUID MECHANICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Define and describe the basic concepts and fundamental principles of fluid mechanics.

LO2 Apply fluid mechanics equations in solving fluid mechanics problem.

LO3 Analyse the fluid mechanics concepts in solving fluid mechanics problem.

SYNOPSIS

Introduction, Classification of fluids. Properties of fluids. Pressure and Head. Fluid Dynamics: Laws of kinematics of fluid flow. Continuity, momentum and energy equations. Bernoulli's equations and its applications. Flow measurements, pitot static tube, venturi meter, and orifice plate. Applications of momentum equations. Dimensional Analysis: Buckingham's theorem, Non-dimensional numbers, similarities of flow. Model studies. Two dimensional ideal fluid flows and viscous flow field. Differential analysis of fluid motion. Lagrangian and Eulerian method. Stream function and potential functions. Boundary layer theory, Karman integral equation, Prandtl-Blasius solution. External flows and the associated drag and lift forces. Working concepts and performance prediction of some fluid machineries such as centrifugal and axial pumps. Turbo blowers and turbines.

c. Douglas, J. F., Gasiorek J. M. and Swaffield, J. A., 2006, Fluid Mechanics, 5th Ed., Prentice Hall, Spain.

BMCG 2011: MECHANICAL ENGINEERING LABORATORY II

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.

LO2 Plan, design and conduct experiments to prove a proposed

hypothesis out of a given real and practical engineering problem.

LO3 Write a well organised, sensible and readable technical reports.

SYNOPSIS

Introduction to safety procedures in a laboratory. Hypothesis formulation. Design of experiments. Data Analysis. Use of graphical presentation techniques for experimental data. Error and uncertainty. Measurement Accuracy and Precision. Statistical analysis. Good laboratory report writing.

The experiments will be conducted in mechanical engineering laboratories that study fundamental engineering concepts in thermodynamics, fluid mechanics, solid mechanics and mechanical design.

BMCK 2713: THERMODYNAMICS

LEARNING OUTCOMES

At the end of this course, student should be able to:

LO1 Define the First and Second Law of Thermodynamics.

LO2 Apply the thermodynamic principles using property tables.

LO3 Solve the thermodynamics processes relating to ideal gas and pure substances.

SYNOPSIS

Thermodynamics principles are applied to the analysis of power generation, refrigeration and air- conditioning systems. Energy and availability analysis (exergy), moist air properties and psychrometric systems and analysis are discussed in this subject.

BMCG 2513: COMPUTER AIDED DESIGN AND MANUFACTURING

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Acquire and apply fundamental sketching and feature modeling,

build feature based models of parts and assemblies for easy editing.

LO2 Produce document design intent of parts and assemblies in manufacturing drawings.

LO3 Design and develop products effectively through the applications of engineering design methodology.

SYNOPSIS

This course will empower the students with fundamental knowledge and technical skills of 3D solid modeling skills using industry-proven 3D mechanical CAD/CAM software. The students will learn about theory of CAD/CAM systems, the different techniques for creating sketches, solid models, assemblies and CAM operations with emphasis on design intent. The course includes hands-on exercises and best practice methods for students to interpret common error messages during part, assembly, drafting stages and machining stages.

BMCK 2913: AUTOMOTIVE TECHNOLOGY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the classifications and fundamental concept of automotive system.

LO2 Analysis the assembly and disassembly process of automotive system or components.

LO3 Review the technological advances in any automotive system in modern vehicle supporting Energy Efficient Vehicle (EEV).

SYNOPSIS

This course covers automotive configurations, basic operation of automotive system and components such as engine and power train system, electric and electronic system, suspension, brake, steering, fuel and lubricants.

REFERENCES

BMCG 3333: MECHANICAL DESIGN

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply the formulation for optimized and safe design based on engineering standard.

LO2 Analyze the statics and dynamics of mechanical systems design.

LO3 Evaluate mechanical design system in solving complex engineering problem.

SYNOPSIS

This course covers a brief review of the Engineering Design Process, Design for Static Strength, Design for Fatigue Strength, Linkage Mechanisms and the Applications of Springs and Brakes, Design of Threaded and Welded Joints, Bearings and Shafts Design and Balancing, the Basics of Gyroscopes, Gear Strength for Power Transmission, as well as the Belt and Chain for Flexible Power Transmission.

d. Design, Fourth Edition 4th Edition, Butterworth-Heinemann; 4 edition (October 5, 2010).

BMCG 2212: MICROPROCESSOR TECHNOLOGY

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the architectures of microprocessor technology and its components.

LO2 Characterize functions of microprocessor and the peripheral devices.

LO3 Design applications for the simple problems in the field of control of processes and machines using microprocessor technology.

SYNOPSIS

Introduction and examples of practical utilizations in the field of control systems, data acquisition and communication using microprocessor technology. Explanation of basic terms (memory, bit, byte, word, address, bus, microprocessor, microcomputer, register, instruction,

instruction set, program, stack, arithmetical/logical unit) and basic principles of the program execution (interrupt and timer/counter). Combinational and sequential logic gate. Computer number system. Principles of the function and utilization of the input/output ports as general digital inputs and output for switches, sensors, LED indicators, alphanumeric LCD, DC and stepper motors. Utilization of A/D converter and serial communication interface for real application.

BMCK 2113: SOLID MECHANICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe and apply the basic concepts and fundamental principles of solid mechanics.

LO2 Analyse and solve the state of stress and strain in elastic structural members under various loading conditions.

LO3 Analyze and determine the principle stresses for plane stress problem due to combine loading.

SYNOPSIS

Introduction to various types of structures and type of supports. Concepts of stress, strain, shear force and bending moment. Theory on torsion. Pure bending on a structure. Combination of loads. Transformation of stress.

BMCK 2923: VEHICLE ELECTRICAL AND ELECTRONICS SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Use the principles of networking in the motor vehicle that can maintain the flow of information between the electronic control units.

LO2 Design a hybrid drive of the motor vehicle that has great potential for lowering fuel consumption and reducing exhaust gas emissions

LO3 Examine the electrical energy balance of the vehicle electrical system, including alternator, starter battery and electrical consumers, during vehicle operation.

SYNOPSIS

This course covers vehicle electrical and electronics systems comprising energy accumulators (batteries), energy converters (alternators) and energy consumers (electrical/electronic equipment). It includes vehicle level integration requirements to individual subsystem and component design validation for powertrain, body, chassis, safety, and entertainment electrical and electronic systems hardware and software.

BMCG 3011: MECHANICAL ENGINEERING LABORATORY III

LEARNING OUTCOME

At the end of this course, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.

LO2 Plan, design and conduct experiments to prove a proposed hypothesis out of a given real and practical engineering problem.

LO3 Write a well organised, sensible and readable technical reports.

SYNOPSIS

Introduction to safety procedures in a laboratory. Hypothesis formulation. Design of experiments. Data analysis. Use of graphical presentation techniques for experimental data. Error and uncertainty. Measurement accuracy and precision. Statistical analysis. Good laboratory report writing.

The experiments will be conducted in mechanical engineering laboratories that study fundamental engineering concepts in:-

A) THERMODYNAMICS
   i) Air-conditioning
   ii) Cooling Tower
B) FLUID MECHANICS
   i) Aerodynamic of common geometry
   ii) Drag Measurement
   iii) Pump Performance Test
C) SOLID MECHANICS
   i) Thin & Thick Cylinder
   ii) Curve & Davit Test

YEAR 3 COURSES – UNIVERSITY COMPULSORY

BLLW 3162: ENGLISH FOR PROFESSIONAL INTERACTION

LEARNING OUTCOMES

By the end of the course, students should be able to:

LO1 Understand extended speech, lectures and follow even complex lines of argument in academic and professional contexts

LO2 Interact spontaneously in discussions using communication strategies.

LO3 Present clear, detailed descriptions and viewpoints on a wide range of issues.

SYNOPSIS

This course which is designed based on a blended and student-centred learning approach aims to develop students' listening skills as well as communication skills and

strategies. Among the elements covered are professional interactions that include group discussion and public speaking. Students are also required to express ideas with relevant examples in public speaking and online assessments. They are also exposed to the rudiments of grammar implicitly via the communicative activities.

YEAR 3 COURSES – COMMON CORE

BENG 2143: ENGINEERING STATISTICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Apply the concepts of data description, normal and sampling distributions, estimation and hypothesis testing, ANOVA, regression and non-parametric tests to solve mathematical problems.

LO2 Analyze engineering data using descriptive statistics.

LO3 Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression.

SYNOPSIS

Topics covered: data description, measurement, probability, discrete random variable, continuous random variable, sampling distribution, estimation, hypothesis testing, simple linear regression and multiple linear regression. The students are required to use SPSS and Minitab software to analyze and interprete the real engineering data. Applications of statistics in engineering are also explained in this course.

BMCK 3013: INTEGRATED DESIGN PROJECT I

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain and apply an appropriate design method at the particular design phase in the course of developing a practical solution of an engineering design problem.
LO2 Develop a practical design solution through a systematic investigation of the engineering design problem.
LO3 Communicate effectively in written, oral and visual means in a technical setting.

SYNOPSIS

This course covers Integrated Design Project process started from problems analysis, Formulating Design problems, Concept Design, Configuration Design, Parametric Design, Detail Design and Prototypes Development. Suitable methods such as QFD, Weighted Objective Method will be used at the particular design stage. Engineering Economics aspect of product, human factor, ethic and safety in design is included. Design for Manufacture and Assembly (DFMA) is a part of this course. In addition students are required to carry out teamwork project and communicate effectively in written and oral in the technical setting.

BMCU 3935: INDUSTRIAL TRAINING

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply appropriate techniques and technical knowledge which relevant for student field of study.
LO2 Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
LO3 Display soft skill especially communication skill at all level.
LO4 Work effectively as an individual, team members and as a leader as well.
LO5 Acquire new knowledge, life-long learning and aware to new technology.

SYNOPSIS

Students in third year are required to undergo industrial training for a minimum of 10 weeks at the designated organisation. During the industrial training, students are given continuous supervision by an industrial supervisor as well as supervisor appointed by the faculty. Daily activities throughout the industrial training must be recorded in a log book provided by the faculty, which will be evaluated by the supervisors. Five credit-hours are given for this industrial training. Students must show satisfactory attendance and discipline in order to pass this course. The faculty' supervisor may visit the students during the training period.

YEAR 3 COURSES – PROGRAMME CORE

BMCK 4913: VEHICLE AERODYNAMICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 To explain the concept of major theories, approaches and methodologies used in CFD.
LO2 To conduct the actual implementation of CFD methods in using commercial CFD codes.
LO3 To be able to interpret and present the results in an appropriate professional context.

SYNOPSIS

The fundamental principles of fluid mechanics are conservation of mass, momentum and energy. Engineering students must understand and be able to apply these basic principles before designing fluids engineering systems. Hence, this course is designed for undergraduate students tend to pursue industrial employment after graduation. The course is focused on two areas: the fundamental of the method and the correct way of conducting the analysis using

readily available software, i.e. ANSYS Version 16.

BMCG 3223: CONTROL ENGINEERING

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Derive mathematical model and obtain transfer function of dynamic systems.
LO2 Explain stability of control system using standard techniques in times domain and analyze the time response of the system.
LO3 Utilize frequency response techniques and its relative stability to control the dynamic systems.

SYNOPSIS

Introduction to open loop and closed-loop control systems. Modeling of real system using differential equations to obtain the transfer function of dynamic systems and utilization of block diagrams for the closed-loop control system. Analysis of system for stability in time and frequency domains, final value, steady-state error, overshoot and settling time. Application of controller such as, P, PI and PID algorithms to achieve the desired system response.

BMCG 4743: HEAT TRANSFER

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Solve problems on steady state and unsteady state on one dimension and multiple dimension heat transfer.

LO2 Determine the heat transfer coefficient for natural or forced convection in dimensionless parameter in thermal system.

LO3 Determine of energy exchanges between black and grey surfaces at different temperatures.

SYNOPSIS

Introduction to heat transfer, steady state conduction-one dimension and multiple dimensions, unsteady state conduction. Numerical analysis for solving heat transfer problems, forced convection in laminar and turbulent flow on plate and pipe, natural convection, phase changes of heat transfer, thermal radiation on black body and surface, and boiling and condensation

BMCK 3913: VEHICLE DYNAMICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain the basics of vehicle handling/ride and primary factors that affect it.

LO2 Develop physical and mathematical model to predict the dynamic response of a vehicle.

LO3 Design vehicle components and subcomponents that meet certain vehicle dynamics performance criteria.

SYNOPSIS

To discuss an introduction and the basic concept of vehicle dynamics, fundamental approach towards vehicle dynamics modeling, vehicle response to various driver and ambient inputs, road loads, mechanics of tyre, relation between ride and handling, steering and suspension system.

BMCK 3933: INTERNAL COMBUSTION ENGINE

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain the fundamental concepts of the internal combustion engine.
LO2 Explain the combustion process, engine cycles, operating parameters and emissions produced by internal combustion engine.
LO3 Use analytical and computational approaches for analyzing internal combustion engine.

SYNOPSIS

This subject introduces students to the fundamentals of internal combustion engines (ICE). Thermodynamic operating principles are used to solve problems on spark ignition and compression ignition engines that operate on four-stroke or two-stroke cycles. The scope of the subject includes all ICE with an emphasis on reciprocating engines used in automobiles as well as rotary engine with similar applications. Topics include engine configuration, thermodynamics parameter, engine cycles, thermochemistry, fuel-air cycles, supercharger and turbocharger and emissions. Detailed analysis of the 1st Law of Thermodynamics on unsteady processes open systems or in differential form to closed systems and reacting gas mixtures. Thermochemistry analyses of the engine fuels as well as performance analysis of supercharged and turbocharged engine are also covered. The latest automotive technologies are also discussed in relevant topics such as hybrid vehicles, higher voltage electrical systems, and electronic valve actuation.

BMCK 3011: AUTOMOTIVE LABORATORY I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Observe discipline in attending laboratory sessions, applied safety precautions before, during and after conducting experiments in terms of experimental procedures and aware of the general experimental ethics.

LO2 Demonstrate and understand the concept vehicle system operation such as brake system, steering system, suspension system, and also engine lubrication system.

LO3 Conduct basic vehicle maintenance such as engine service, brake service, suspension service, wheel & tyre balancing and alignment.

SYNOPSIS

To demonstrate the principle operations of the vehicle systems such as internal combustion engine system, suspension system, braking system, steering systems, and wheel & tyre service. Students will practically expose to the basic vehicle maintenance such as engine lubrication, engine top overhaul, brake service, and wheel balancing & alignment.

REFERENCES

BMCG 3233: MECHANICAL VIBRATION

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply the fundamental principles of vibration of one-and two-degree-of-freedom systems in engineering practice.

LO2 Solve the natural frequencies and mode shapes of a vibrating system.

LO3 Design techniques of vibration control.

SYNOPSIS

Fundamental of vibration. One-degree-of-freedom system: free vibration of an undamped and damped systems. Harmonically excited vibration: forced undamped and damped systems; unbalance rotating mass; base excitation. Two-degree-of-freedom system: natural frequencies and mode shapes. Continuous structures: beam, string and plates. Design

of vibration suppression: vibration isolation and vibration absorber.

BMCK 3923: VEHICLE SYSTEM MODELLING & SIMULATION

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Develop mathematical models for a given vehicle application or analysis.
LO2 Verify the models using vehicle dynamics simulation software.
LO3 Simulate and evaluate the performance of vehicle system.

SYNOPSIS

This course is intended to introduce vehicle dynamics modelling and simulation. Mathematical models will be developed in order to predict the vehicle behaviour in longitudinal, lateral and vertical directions. Tire modelling will cover both linear and non-linear tire models. Validation and limitations of vehicle models will be discussed. These models will be used to evaluate the performance of tire, ride and handling. For vehicle handling assessment, steady-state and transient tests will be described. Modeling and simulation of vehicle systems in MATLAB/SIMULINK environment will be used extensively in class notes and assignments.

BMCK 3021: AUTOMOTIVE LABORATORY II

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Analyse the principles behind the design of internal combustion engine
LO2 Describe the working principles of experimental apparatus used to measure the engine performance and engine breathing.
LO3 Demonstrate how to set up the apparatus to measure the engine performance and engine breathing.
LO4 Evaluate and analyse the experimental results regarding engine performance and engine breathing.

SYNOPSIS

This course covers the aspects of engine performance and engine breathing. It includes the soaking process, instrumentation and data collection. Students will learn how to set up the apparatus as well as running the experiment to obtain reliable data.

YEAR 4 COURSES - UNIVERSITY COMPULSORY

BIPW 3112: CRITICAL AND CREATIVE THINKING (PEMIKIRAN KRITIS DAN KREATIF)

LEARNING OUTCOMES

Pada akhir mata pelajaran ini, pelajar akan dapat:

LO1 Mengenal pasti prinsip asas kemahiran pemikiran kritis dan kreatif.
LO2 Menganalisis maklumat yang dikumpul dan dicerap untuk membuat keputusan.
LO3 Membentuk konsep atau idea penyelesaian baru.

SYNOPSIS

Mata pelajaran ini direka untuk memberi pendedahan kepada pelajar tentang prinsip-prinsip asas dalam pemikiran kritis & kreatif. Pelajar akan mengaplikasikan kaedah pemikiran kritis & kreatif dalam penyelesaian masalah. Pelajar akan dipandu di dalam projek akhir di mana penganalisaan keperluan produk dari pelbagai perspektif dan pemikiran di luar batasan akan diaplikasikan.

BTMW 4012: ENTREPRENEURSHIP TECHNOLOGY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply the concept and importance of entrepreneurship to real world situation.(C3)
LO2 Demonstrate the techniques in digital entrepreneurship practiced by entrepreneurs to market a business.(P4)
LO3 Choose suitable business idea and process in developing a business plan for a small business.(A3).

SYNOPSIS

The course provides students with technological knowledge about entrepreneurship as well as the skills to turn such knowledge into practice. The teaching and learning (T&L) activities include case study and field work with the aim to inculcate entrepreneurship values and entrepreneurship acculturation with a view to successfully launch and subsequently manage their enterprises. Students will be exposed with the support systems available or government agencies in starting new ventures, including the tactics commonly employed by entrepreneurs starting a business. The course allows students to critically evaluate business in terms of technical feasibility, investment potential, and risks.

YEAR 4 COURSES – COMMON CORE

BMCU 4972: FINAL YEAR PROJECT I

LEARNING OUTCOMES

After completing the course, students should be able to:

LO1 Formulate a problem statement and design a project methodology to fulfill objecives of the project.

LO2 Conduct initial measurements and/or predictive studies to meet objectives of the project.

LO3 Conduct initial experiments and/or numerical studies to meet the project objectives.

LO4 Present the results in written and oral format.

SYNOPSIS

The student needs to plan and implement the project individually that related to the mechanical engineering field. It covers problem statement, literature review, methodology to overcome the problem. The student needs to achieve the objective of the project and presented it in the report.

BMCU 4022: ENGINEER AND SOCIETY

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply ethical principles and commitment, to professional ethics, responsibilities, and norms of engineering practice.

LO2 Apply reasoning informed by contextual knowledge to assess health, safety, and legal issues and its subsequent responsibilities, relevant to professional practice.

LO3 Understand the needs for sustainable development and the impact of engineering solutions on society and the environment.

SYNOPSIS

Role of engineer in Nation Building, evaluation of engineering, National development Role of engineers in society, laws related to public safety, health & welfare, future engineers, professionalism and codes of ethics, definition of professionalism, understanding engineering as a profession, ethical theories, IEM and BEM code of ethics. Ethical problem solving techniques analysis of issues in ethical problems, line drawing, flow charting, learn to handle conflicting problems, application in bribery and accepting gifts situation. Ethics practice in Occupational Safety and Health at work. Rights and responsibilities of engineers. Quality from engineering perspective. Carrier guidance and project management.

BMCK 3023: INTEGRATED DESIGN PROJECT II

LEARNING OUTCOMES

At the end of this course, the student should be able to:

LO1 Design solution by synthesizing mechanical engineering knowledge that will solve complex mechanical engineering problem in accordance with relevant standards.

LO2 Utilize modern engineering and IT tools in facilitating solutions to complex mechanical engineering problems with an understanding of the limitations.

LO3 Evaluate the impact of the design product, component or processes in term of safety, environmental and sustainability factors.

LO4 Demonstrate effectively teamwork skill in completing the IDP.

LO5 Apply project management and financial knowledge effectively in completing the IDP.

SYNOPSIS

Integrated Design Project is a course where students have to design a mechanical engineering project, including project management, project planning, project feasibility study, design selection, design costing and sizing, analysis and evaluation. The course focuses on the implementation and integration of product/conceptual design development to produce a comprehensive final technical report, including engineering proposals and drawings, specifications and bills of quantities, cost estimates of development projects given to students, working in groups. Apart from basic mechanical design, students are also required to integrate their knowledge of other engineering disciplines such as (but not

limited to) structural analysis and design, including material selections, project scheduling techniques and sustainable development considerations into their overall project work. At the end of this course, the students will be able to comprehend the needs and requirements for product design procedures and are able to appreciate the importance of integration and synthesis of various disciplines of mechanical engineering knowledge.

BMCU 4011: ENGINEERING SEMINAR

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify the professional engineering knowledge, practices and responsibilities.

LO2 Gather and sort relevant information with regard to the given technical talk.

LO3 Discuss current engineering issues and practices that impacts engineering professionals.

SYNOPSIS

A series of technical talks will be organised and the attendance is compulsory. The technical talks will dwell on engineering profession that relates to the technology advancement, economy issues, technopreneurship, environment, sustainability and safety aspects. Reflection of the seminar will be discussed in a forum and short report will be produced by the students.

BMCU 4984: FINAL YEAR PROJECT II

LEARNING OUTCOMES

At the end of this course, students will be able to:

LO1 Carry out project management based on the principle of engineering.

LO2 Conduct initial measurements and/or predictive studies to meet objectives of the project.

LO3 Analyze data and interpret results.
LO4 Present a full project report in written and oral forms.

SYNOPSIS

The student needs to plan and implement the project individually that related to the mechanical engineering field. It covers problem statement, literature review, methodology to overcome the problem. The student needs to achieve the objective of the project and presented it in the report.

BMFG 4623: ENGINEERING MANAGEMENT AND ECONOMY

LEARNING OUTCOMES

At the end of this course, student should be able to:

LO1 Explain the principles and terminology of engineering economy, concepts of time value of money, and risk planning.
LO2 Apply the concepts, principle and techniques in project management and engineering economy.
LO3 Generate a comprehensive & viable Project Proposal and justify by a presentation in group discussion session.
LO4 Evaluate and select between alternatives using suitable methods such as Present Worth, Future Worth, Annual Worth Analysis; Breakeven & Payback Analysis.

SYNOPSIS

This course covers engineering economics and managing risk in an organization. Engineering economics discusses about the time value of money and interest relationships, which are useful to define certain project criteria that are utilised by engineers and project managers to select the best economic choice among several alternatives. Projects examined will include both product and service-producing investments. The effects of escalation, inflation, and taxes on the economic analysis of alternatives are also discussed. Management of risk incorporates the concepts of probability and statistics in the evaluation of alternatives. This allows management to determine the probability of success or failure of the project.

BMCK 4923: VEHICLE CONTROL SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the function, principal and theory for each of the subsystem covered in the syllabus.

LO2 Develop mathematical models of the related vehicle subsystem.

LO3 Design and integrate simulation models with controller to evaluate the performance of system using computer-aided tools.

SYNOPSIS

This course is intended to introduce control systems for vehicles including vehicle longitudinal control, lateral control and vertical control. Vehicle longitudinal control will include topics such as anti-lock braking, traction control, cruise control and adaptive cruise control. Topics on vehicle lateral control that will be covered are active front wheel steering, four wheel steering and electronic stability control. For vehicle vertical control, focus will be given on both semi-active and active suspension systems. Advanced topics such as steer-by-wire and brake-by-wire will be briefly described. MATLAB/SIMULINK software will be introduced for the simulation works.

BMCK 4011: AUTOMOTIVE LABORATORY III

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Demonstrate and understand the concept autonomous vehicle system operation such as steer-by-wire, throttle-by-wire and brake-by-wire system.

LO2 Plan, setup and execute simulation and /or laboratories testing on x-by-wire system.

LO3 Write a well-organized technical reports that explain the findings and present the findings in seminar confidently.

SYNOPSIS

To demonstrate the principle operations of the vehicle autonomous systems based on throttle, brake and steering systems. The students will be practically exposed to develop the autonomous systems by

specifying automated control of the steering, break and throttle system.

BMCK 4933: VEHICLE AUTONOMOUS SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the fundamental concept and theory in autonomous vehicle as well as the features and function of sensors and actuators involved.

LO2 Create and evaluate control system for autonomous vehicle system.

LO3 Apply and analyze fundamental methods in autonomous vehicle, such as motion planning, obstacle avoidance, localization and mapping using simulation software.

SYNOPSIS

This subject discusses the state of the art of autonomous systems, examines some promising autonomy technology that will be available in the near future, and identifies some shortfalls in autonomy capability that need to be alleviated. The subject goes on to explore the level of autonomy as a design choice and autonomy technologies.

YEAR 4 COURSES – PROGRAMME ELECTIVE

BMCK 4973: NOISE, VIBRATION & HARHNESS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 To demonstrate understanding of fundamental principles of acoustics and noise relating to automotive including designing and evaluating its control measure.

LO2 To demonstrate understanding of fundamental principles of vibration relating to automotive including designing and evaluating its control measure

SYNOPSIS

This subject introduces the fundamental concept of noise and vibration and their generation and propagation in motor vehicles. It is then followed by the control measures to reduce both the noise and vibration in engineering practice.

BMCK 4953: VEHICLE POWERTRAIN SYSTEMS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Explain the principles behind the design of vehicle powertrain components and systems.

LO2 Use mathematical programming for examination of performance and energy usage.

LO3 Analyse on the overall vehicle performance using a system approach that focuses on the integration and interaction of all powertrain components

SYNOPSIS

To introduce and discuss the basic concept of automotive power train, fundamental approach towards engine and transmission matching, powertrain functions, torque converter, automatic & manual transmission, transmission friction elements and transmission gear design.

BMCK 4993: VEHICLE STRUCTURE ANALYSIS

LEARNING OUTCOMES

At the end of this course, student should be able to:

LO1 Fundamental of vehicle structure and load consideration for vehicle structure

LO2 Engineering analysis of vehicle structure under bending and torsional load

LO3 Experimental study and validation of FEA model of vehicle structure using FEA software.

SYNOPSIS

In this course, student will learn about various loads that acting to vehicle structure that should be considered in designing vehicle structure. From this loading condition, students need to use analytical formulation they have learned in previous courses to predict the performance of the structure. Then, the will be exposed the modern tool in predicting the vehicle structure using finite element software.

BMCK 4943: VEHICLE ERGONOMICS

LEARNING OUTCOMES At the end of the course, students should be able to:

LO1 Demonstrate the knowledge and understanding of automotive manufacturing system.

LO2 Evaluate human factors and how it is related to the commercial success of automotive industries.

LO3 Synthesize ergonomics solutions for a case study of vehicle design.

SYNOPSIS

Ergonomics refers to human and aesthetic factors that influence the design of vehicles, systems and environments. These factors are supported by the use of anthropometric, psychological and sensory data gathering and analysis techniques. Understanding spatial relationships between people, objects and their environments is important when considering human factors in vehicle design. This course introduces understanding and applicability of ergonomics in vehicle design. This is held by identifying and

evaluating major qualitative human factors considerations in vehicle design. This course also include topics such as driver's and passenger's comfort, interior features and safety issues that could be incorporated in practical designs, graphical skills, modelling as a mechanism for developing and evaluating vehicle design.

BMCK 4983: ELECTRIC PROPULSION SYSTEM

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Demonstrate the knowledge and understanding of electric and hybrid electric vehicle powertrain system.

LO2 Analyse the power requirements of major components of electric propulsion system.

LO3 Design integration of electric propulsion system with vehicle system to evaluate the vehicle performance.

SYNOPSIS

To introduce and discuss the basic concept of electrified powertrain systems include electric vehicle, hybrid powertrain architectures, dynamics of hybrid transmissions, energy storage systems and power management.

BMCK 4963: AUTOMOTIVE MANUFACTURING SYSTEMS

LO1 Demonstrate the knowledge and understanding of automotive manufacturing system.
LO2 Analyse the manual and automated automotive manufacturing systems.
LO3 Apply manufacturing system techniques and technologies through case study related to automotive application.

SYNOPSIS

Automotive manufacturing is among the core activities in vehicle development. Many manufacturing system are developed and implemented by automakers such as lean manufacturing to ensure the highest quality and quantity of product are achieved with minimum cost and waste. This subject covers the topic on automotive manufacturing system, with emphasize on lean manufacturing technique. Among the contents covered are value stream mapping, kaizen, continuous flow manufacturing cell, kanban, pull system, 5s, 7 wastes, single minute exchange die (SMED) and total preventive maintenance (TPM).

4.3 Diploma in Mechanical Engineering Programme (DMC)

PRELIMINARY SPECIAL SEMESTER - UNIVERSITY COMPULSORY

DLLW 1112: FOUNDATION ENGLISH

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Interpret information from various types of oral texts.

LO2 Express ideas and thoughts orally in group discussions.

LO3 Distinguish different types of reading texts of varying length and complexity.

LO4 Produce an article based on non-linear texts in pair.

LO5 Apply appropriate grammar elements in quizzes.

SYNOPSIS

This course is designed to help students improve their proficiency in the English language and to communicate effectively in both spoken and written forms. Five main aspects: listening, speaking, reading, writing and grammar are taught in an integrated approach so as to build confidence among the learners to become efficient speakers of English in their tertiary education.

DIPW 1112: LEADERSHIP (KEPIMPINAN)

LEARNING OUTCOMES

Pada akhir kursus ini, pelajar akan dapat:

LO1 Mengenal pasti dan menerangkan konsep utama dalam kepimpinan.

LO2 Menunjukkan kemahiran interpersonal dalam melaksanakan tugasan kumpulan.

LO3 Mengubung kait peranan dan kepimpinan dan kepengikutan.

SYNOPSIS

Kursus ini membincangkan konsep-konsep kepimpinan, kemahiran interpersonal dalam kepimpinan, kerja berpasukan, kepengikutan, budaya kepimpinan dan

kepelbagaian budaya/etika organisasi. Tujuan kursus ini ialah memberi kefahaman dan penghayatan aspek kepimpinan dalam diri pelajar. Pengajaran dan pembelajaran akan dilaksanakan dalam bentuk pembelajaran berasaskan pengalaman melalui aktiviti berpasukan di dalam dan di luar kuliah. Pada akhir kursus ini, pelajar diharapkan dapat membentuk keyakinan diri, kesedaran kendiri, etika dan profesionalisme disamping dapat mengaplikasi kemahiran komunikasi, kepimpinan dan kerja berpasukan dalam mengurus kehidupan seharian mahupun dalam mengurus organisasi.

DIPW 2112: APPRECIATION OF ETHICS AND CIVILIZATION (PENGHAYATAN ETIKA DAN PERADABAN)

LEARNING OUTCOMES

Pada akhir kursus ini, pelajar akan dapat:

LO1 Menerangkan teori dan konsep etika daripada peradaban yang berbeza.
LO2 Menghuraikan kepentingan isu kontemporari berkaitan pelbagai bidang mengikut acuan etika dan peradaban.
LO3 Membincangkan sistem, tahap perkembangan, kemajuan sosial dan kebudayaan merentas budaya untuk Malaysia.

SYNOPSIS

Kursus ini membincangkan tentang teori dan konsep ilmu, etika serta peradaban yang berunsurkan perbandingan sistem, kemajuan sosial dan kebudayaan merentas budaya yang pelbagai di Malaysia. Selain itu, kursus ini juga menerangkan tentang isu kontemporari berkaitan pelbagai bidang mengikut acuan etika dan peradaban di Malaysia. Pendekatan kursus ini boleh membina rakyat Malaysia yang datang dari pelbagai latar budaya merentasi nilai budaya bagi melahirkan budaya manusiawi dengan nilai-nilai baik.

YEAR 1 COURSES - UNIVERSITY COMPULSORY

DTMW 1012: FUNDAMENTALS OF ENTREPRENEURIAL ACCULTURATION (ASAS PEMBUDAYAAN KEUSAHAWANAN)

LEARNING OUTCOMES

Di akhir kursus ini pelajar akan dapat:

LO1 Menerap budaya keusahawanan berdasarkan teori keusahawanan, revolusi usahawan, sejarah pembangunan usahawan dan perkembangan keusahawanan di Malaysia.

LO2 Memperakui dan mengaplikasikan kemahiran keusahawanan seperti kreativiti, inovasi, pro-aktif, mengambil risiko, mengenalpasti peluang, pemasaran, dan rangkaian untuk memasuki/menembusi pasaran.

LO3 Melaksanakan penganjuran seminar keusahawanan dan kerja lapangan perniagaan di samping membuat pembentangan projek perniagaan serta berkongsi pengalaman berkaitan perlaksanaan projek perniagaan kumpulan masing-masing.

SYNOPSIS

Kursus ini akan membekalkan pelajar dengan motivasi dan kemahiran utama keusahawanan. Disamping itu, pelajar juga akan mendapat kemahiran tentang prinsip-prinsip dan amalan yang diperlukan untuk memulakan, mengembangkan dan memperkukuhkan sesebuah perniagaan. Aktiviti pengajaran, pembelajaran dan aplikasi yang menerapkan teori dan amalan akan membantu pelajar menguasai kompetensi yang perlu sebelum menceburkan diri dalam bidang perniagaan. Kursus ini juga membantu pelajar membentuk jaringan/ rangkaian

perniagaan melalui perbincangan perniagaan, similasi dan seminar. Pelajar akan didiedahkan dengan isu-isu yang berkaitan dengan pemasaran, pengurusan strategi dan risiko. Disamping itu, pelajar akan dibekalkan dengan kemahiran yang perlu untuk menyediakan penyata aliran tunai dan asas dalam membangunkan menyediakan perancangan perniagaan.

DKKX XXX1: CO-CURRICULUM I

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Recognise a balanced and comprehensive education
LO2 Develop leadership aspects stressing on diciplines and cooperation within a group or organisaton.
LO3 Build personality and character guided by rules of conduct.
LO4 Foster cooperation and unity in multi-racial society.

SYNOPSIS

a. Culture
   Choir, *Gamelan*, *Cak Lempung, Nasyid*, *Khat*, Acting, Art, Debate (*Bahasa Malaysia*), Debate, Interior Design and *Kompang*.
b. Entrepreneurship

d. Recreation
Go-Kart, Adventure dan Cycling

e. Sports
Swimming (Male), Volleyball, Golf, *Kayak*, *Sepak Takraw*, Swimming (Female), Aerobics, Badminton, Football and Netball.

f. Martial Arts
Silat Gayong, Karate-Do and *Taekwando*

DLLW 2122: ENGLISH FOR EFFECTIVE COMMUNICATION

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Perform oral skills through impromptu speech.

LO2 Give descriptions of a product through informative speech.

LO3 Describe processes from manual instructions in an oral presentation.

LO4 Demonstrate oral social skills (role-play) based on a situational context.

SYNOPSIS

This course is designed to provide students with the necessary communication skills to communicate effectively. The skills covered are speaking, reading and writing. The elements of grammar are taught to complement the topics covered in this course. The documents covered are product descriptions and manual instructions. Students demonstrate interpersonal skills through speeches and role-play. The elements of problem-based learning (PBL) are especially exercised during the oral

presentation of the product and manual descriptions as well as role-play.

YEAR 1 COURSES - COMMON CORE

DMCU 1032: FUNDAMENTAL MATHEMATICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Explain fundamental knowledge of mathematics that is used in engineering field.
LO2 Solve simple engineering problem by providing a suitable formulation.
LO3 Apply knowledge acquired in advanced mathematic courses: e.g. Calculus, Engineering Mathematics and Differential Equation.

SYNOPSIS

This course discusses about Real Number System; Complex Numbers; Matrices; Geometric Coordinates; Functions and Graph; Trigonometry; and Polynomials.

REFERENCES

a. Zuraini Othman & Sharifah Sakinah Syed Ahmad. (2008). Module of Fundamental Mathematics, UTeM.

d. Davis, M.E. & Edward, C.H. (2007). Elementary Mathematical Modeling: Functions and Graphs. Second edition. Pearson Prentice Hall.

DMCU 1012: EXPERIMENTAL METHOD

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe clearly basic mechanical quantity, measurement techniques, procedures and devices.

LO2 Apply the mechanical measurement knowledge through the problem given.

LO3 Analyze collected experimental data, thus recognizing the important point of the data through discussion.

LO4 Communicate in writing and produce proper laboratory report that meets the requirement format.

SYNOPSIS

Introduction to the experiment and measurement concept. Experimental data properties and graphical presentation of the data. Dealing with hysteresis and uncertainty. This course also covers experiment data processing which consists of using statistical method for irregular data, regression line, and using spreadsheet in data analysis. Introduction to the basic knowledge about measurement devices.

DMCU 1233: CHEMISTRY

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe (C1) and Explain (C2) fundamental of chemistry principle.

LO2 Solve (C3) and Analyze (C4) various engineering problems using relevant chemistry principles.

LO3 Demonstrate (P1 – P4) chemistry principles through laboratory experiment.

SYNOPSIS

This course will discuss about the concepts in Chemistry: The Study of Change; Atoms, Molecules and Ions; Chemical Reaction; Structure of Atoms; The Periodic Table; Chemical Bonding; Properties of Matter; and Thermochemistry.

REFERENCES

a. Chang, R., 2013, *Chemistry*, 12th Ed., McGraw Hill, USA.

DACS 1263: FUNDAMENTAL PHYSICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Define the basic laws and comprehend the basic concepts in physics.
LO2 Apply the laws and the concepts systemtically in problem solving.
LO3 Relate between the various topics covered and their application in the field of engineering.
LO4 Make accurate measurement and present result in a proper scientific report.

SYNOPSIS

The topics cover in this course are: forces, acceleration and Newton's second law of motion, motion with a changing velocity, circular motion, conservation of energy, linear momentum, fluids, heats, temperature, electric forces and fields, capacitor, electric current and circuits, reflection and refraction of light.

REFERENCES

DEKG 2113: ELECTRICAL & ELECTRONIC PRINCIPLES

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Understand the fundamental concepts of electricity (DC and AC).
LO2 Understand the uses of electrical and electronics circuits.
LO3 Familiarize with integrated and digital circuits.

SYNOPSIS

This module provides knowledge relating to electrical units and parameters, direct and alternating current sources, Ohm's Law, passives components like resistor and capacitors in parallel and series connections, sine wave characteristic,

transformers, actives components (integrated circuit) like diode, transistor, operational amplifier, digital circuits and their application.

DMCU 1912: TECHNOLOGY AND ENGINEERING WORKSHOP PRACTICE I

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify common shop hazards and common workshop safety equipments.
LO2 Demonstrate the proper and correct tools and safety equipments usage for a given job.
LO3 Produce products during welding, fabrication and fitting projects.
LO4 Prepare reports on all projects

SYNOPSIS

a. Welding

This course is designed to provide students with a fundamental understanding of gas welding, arc welding (SMAW) and MIG welding (GMAW), welding safety, welding machines (gas, arc, MIG), electrode classifications and electrode selection. Training to develop the basic welding skills in basic joint configurations such as butt joint and tee joint.

b. Fabrication

Covers layout, cutting, forming and joining of basic sheet metal and use of hand tools and equipment to develop and fabricate basic sheet metal project based on drawing of the project.

c. Fitting

This course is designed to give students a good appreciation on the various types of hand tools commonly used for measurement, marking out, and metal removal. This course also let the students understand the uses of common hand tools and appreciate the important of fitting work in the finishing product. Through the hands-on practice given, the students will acquire some of the basic skills and technique involved with these hand processes.

DMCU 1042: CALCULUS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Define limits and continuity of functions using computational methods of limits.
LO2 Select differentiation and integration techniques to solve the mathematical problems.
LO3 Apply differentiation and integration techniques in solving advance mathematics, and engineering problems.

SYNOPSIS

This course will discuss about the concepts of Limits & Continuity; The Derivatives; Applications of Differentiation; Integration; and Applications of Integration.

DITG 1113: COMPUTER PROGRAMMING

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe the fundamental principles of problem solving, programming techniques and programming structures in program development
LO2 Explain problem solutions based on the principles of problem solving, programming technique and programming structure.
LO3 Produce program codes by applying suitable programming structure and techniques).

SYNOPSIS

This course discusses about the basic principles of computers, software development methodology and basic programming principles such as syntax, semantic, compiling, and linking. Programming techniques using C++ such as data type and operator, selection, repetition, function, array, file, structure and pointer are learnt towards the end of this course.

DMCU 1323: MANUFACTURING PROCESS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Recognize and explain very well on the issues and aspects of manufacturing.
LO2 Identify and select the most suitable manufacturing processes in producing a particular product without ignoring the safety, economic and environment aspects.
LO3 Identify and select the most suitable material for a particular manufacturing process.
LO4 Identify and select the most suitable machines for a particular manufacturing process.

SYNOPSIS

This course covers manufacturing and the aspects of manufacturing, joining processes and equipments, metal casting processes and equipments, metal and plastic forming processes and equipments, material removal processes and machines, and modern machining processes.

DMCD 1543: ENGINEERING GRAPHICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Acquire and apply fundamental knowledge of mechanical engineering drawing format and type.

LO2 Produce geometric, orthographic, isometric, section cut and detail drawing using manual technique or CAD.

LO3 Use CAD software in order to produce 2D drawing and 3D solid modelling.

LO4 Produce accurate engineering drawing base on project given.

SYNOPSIS

In the first part of this course; geometric, orthographic, dimensioning, isometric, sectional view and assembly drawing will be explains using manual drafting technique. In the second part, CAD software will be used in order to generate those drawing. Additional 3D solid modeling also will be introduced in this course.

DMCU 2922: TECHNOLOGY AND ENGINEERING WORKSHOP PRACTICE II

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Define, understand and apply fundamentals of machining process on conventional and CNC machining.

LO2 Apply the knowledge of cutting and machine parameters in machinng activities.

LO3 Understand and creating programming cycle for CNC machine.

LO4 Respond to the project procedures given in the workshop and report in the appropriate scientific manner as a team.

SYNOPSIS

a. Conventional Machine

Introduction to fundamentals of machining process on conventional (Lathe and Milling) machines and its application, such as in handling aspect, safety factor, main function and machining/manufacturing process

includes in conventional lathe and milling machining.

b. CNC Machine

Covers fundamentals of machining process on advance machine as CNC lathe machine, CNC milling machine, EDM machine and wire cut machine and its applications such as in handling aspect, safety factor, main function and machining/manufacturing process with high accuracy and complex method.

REFERENCES

a. Kibbe, Neely, Meyer and White, 2009, Machine Tool Practices, 9th Edition, Prentice Hall, New York.

DMCS 1313: STATICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO01 Describe and apply the basic concepts and fundamental principles of engineering mechanics (statics).

LO02 Analyze and solve equilibrium problems of particle and rigid body.

LO03 Analyze and solve problems of Center of Gravity and Centroid

LO04 Demonstrate appropriate test method in determining force and moment in mechanical structure.

SYNOPSIS

The introduction and the basic concept of statics as physical sciences, System of Units, Scalars and Vectors, Free body diagram, Forces system, Force system resultants and Moment, Equilibrium of a particle, Equilibrium of a rigid body, Structural analysis (trusses analysis and simple frames and machines), Friction and Center of gravity and Centroid.

DMCU 2052: ENGINEERING MATHEMATICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the concepts of multivariable functions, multiple integrals and vector-valued function.

LO2 Solve the differentiation and integration problems using the knowledge of multivariable functions, multiple integrals and vector-valued function.

LO3 Apply the knowledge of engineering mathematics in particular engineering problems.

SYNOPSIS

This subject consists of three chapters: Multivariable Functions, Multiple Integrals and Vector-Valued Functions. The syllabus is developed by introducing the concepts of the functions with several variables, double and triple integrations and also vector-valued function, followed by learning various techniques in solving the problems and its application in physical and engineering fields.

DMCU 2423: MATERIALS SCIENCE

LEARNING OUTCOMES

At the end of this course, students should be able to: -

LO1 Describe the classifications, structures and applications of metals, ceramics and polymers correctly.

LO2 Analyze deformations behavior and strengthening mechanisms relying to its structure and properties of materials clearly.

LO3 Apply Fick's Law in calculating the diffusion process and its mechanism in solids properly.

LO4 Demonstrate appropriate test methods in determining mechanical properties.

LO5 Apply the relation between composition, microstructure and properties of metallic materials by using apposite phase diagram and heat treatment process.

SYNOPSIS

Introduction to fundamentals of Materials Science and its applications, atomic structure, crystal structure, solidification, imperfections and solid diffusion, mechanical and physical properties, phase diagrams and transformation, types and applications of materials.

YEAR 2 COURSES - UNIVERSITY COMPULSORY

DLLW 3132: ENGLISH FOR MARKETABILITY

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Produce effective written correspondence at workplace.
LO2 Justify opinions in spoken interaction at workplace.
LO3 Analyse grammar rules in workplace interactions.

SYNOPSIS

This course aims to introduce and expose students to the basic tenets of communication specifically the oral and written communication required at the workplace. Students will be provided with the opportunity to produce a reflective writing, resume, job-application letter, e-message and report. They will also be able to participate in an interview, and to discuss and explain information in group discussions. Students will be exposed to situations where they learn to function as individuals and team members by communicating in spoken and written forms using appropriate language in a variety of workplace contexts.

YEAR 2 COURSES - COMMON CORE

DMCU 2062: DIFFERENTIAL EQUATIONS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe the basic concept and solution of Differential Equations, Laplace transform and Fourier series.

LO2 Select an appropriate technique to solve problems involving differential equations.

LO3 Apply the concept of differential equation in solving engineering problems.

SYNOPSIS

This course provides basic concepts of Differential Equations and its techniques. The students are introduced to the first order differential equations and solve using analytical methods. Upon completion, the students are then introduced to the second order linear differential equations with constant coefficients and learn the methods

of solving and its applications. The course is extended to the following chapters which include Laplace transform and Fourier series.

DMCD 3523: ENGINEERING DESIGN

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Recognize terminology used in machine components and its design.
LO2 Explain the type of failures of machine components design.
LO3 Apply the formulation of the safe design for machine components.
LO4 Design the most suitable size and shape of machine components.
LO5 Analyze and design machine components under different loads and conditions.

SYNOPSIS

This course covers Introduction to Engineering Design, Design of Static and Fatigue Strength, Design of Threaded and Welded Joints, Bearings, Shafts/rods, Gears and Springs. Student will learn to design a simple machine applying foundation of mechanical engineering concept. Apart from that, a topic on sustainability of design is introduced for eco-friendly design.

DMCF 2232: HYDRAULIC AND PNEUMATICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe fundamental principles that govern the behavior of systems

LO2 Explain the common hydraulic and pneumatic components, their use, symbols and their application in the industry.

LO3 Design hydraulic and pneumatic system manually and using related computer software.

SYNOPSIS

This course covers the introduction of the hydraulic and pneumatic systems, types of pump, compressor and their working principles, types of valve, actuator, and their usage, performance of the system, others fluid power system ancillaries and sensors, fluid power circuit design and analysis with manual control and electrical control. Computer software is used to design and simulate the system circuit. The electro-mechanical is also embedded in circuit design and the application of fluid power in robotic and mobile hydraulics.

DMCS 2333: SOLID MECHANICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Use concept of stress-strain relationship and factor of safety appropriately in engineering design.

LO2 Apply and solve the state of stress and strain due to bending, torsion, axial loading in elastic structural members.

LO3 Demonstrate appropriate test methods in determining mechanical properties.

SYNOPSIS

This course introduces to the various types of structures and type of supports. Understand the concepts of stress, strain, shear force and bending moment. It also covers the theory of torsion, shear flow with

combination of loads, including the deflection of beams.

REFERENCES

a. Beer, F.P., et al., 2006, *Mechanics of Materials* 4th Edition in SI Units, McGraw-Hill.

d. Vable, M., 2002, *Mechanics of Materials*, Oxford University Press.

DMCM 2713: DYNAMICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe the fundamentals of dynamics.
LO2 Apply the dynamics of particles and rigid bodies using principle of force and acceleration, work and energy, and impulse and momentum.
LO3 Apply the laws of dynamics to analyze and interpret the dynamics of particles and rigid bodies.
LO4 Demonstrate engineering dynamic principles through laboratory experiment.

SYNOPSIS

This course introduces to the principle of dynamics based on kinematics and kinetic. Understand the concept of position, velocity and acceleration, application of Newton second law, principle of work and energy, principle of impulse and momentum for particle and rigid body.

REFERENCES

a. Beer, F.P., 2010, *Vector Mechanics for Engineers, Dynamics SI Units*, 9th Edition, McGraw-Hill.

c. Bedford, A., and Fowler, W., 2008, *Engineering Mechanics, Dynamics*, 5th Edition, Prentice Hall.

DMCT 2133: THERMODYNAMICS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Define the First and Second Law of thermodynamics.
LO2 Apply the thermodynamics principles using property table.
LO3 Solve the thermodynamics processes relating to the ideal gas and pure substance.
LO4 Demonstrate appropriate test methods in determining thermodynamics problems.

SYNOPSIS

This course covers the basic concepts and definitions of engineering thermodynamics, energy, work and heat, properties of pure

substances (relationships of P-V, T-V, P-T and T-s diagrams), First Law of Thermodynamics, Second Law of Thermodynamics and Entropy.

REFERENCES

a. Cengel, Y.A. and Boles, M.A., 2011, Thermodynamics: An Engineering Approach, 7th ed, McGraw Hill. Singapore.

DMCU 2982: DIPLOMA PROJECT I

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Apply basic science, mathematics and mechanical engineering knowledge.
LO2 Design and analysis which is utilise appropriate modern tools technology in some aspect of the work, emphasising the need for technicians.
LO3 Present the design analysis and results solution of well-defined engineering problem in written and oral presentation.

SYNOPSIS

The students need to solve a well-defined mechanical engineering problem by design a mechanical product, process or system. Students are required to plan and implement the project that related to mechanical engineering field in a form of group, but the assessment will be individually. It covers initial report writing for design and analysis. The students need to achieve the objective of the project and present it in the report and oral presentations.

DMCU 3082: STATISTICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Describe the basic concept of descriptive, probability and inferential statistics.

LO2 Identify an appropriate statistical technique to solve descriptive, probability and inferential statistics problems.

LO3 Apply the concept of descriptive, probability and inferential statistics in solving engineering problems

SYNOPSIS

This course covers Data description and Numerical Measures, Probability, Random Variables and Probability Distributions, Sampling Distributions, Estimation, Hypothesis Testing, Simple Linear Regression.

REFERENCES

a. Devore, J.L., 2008, *Probability and Statistics for Engineering and the Sciences*, 7th Edition, Thomson – Duxbury.

d. Mann, P.S., 2005, *Introductory Statistics Using Technology*, 5th Edition, John Wiley.

DMCF 2223: FLUID MECHANICS

LEARNING OUTCOMES

At the end of the course, students should be able to:

LO1 Use fluid and its properties equation in the context of fluid mechanics application.

LO2 Apply fluid mechanics equations in solving fluid statics and dynamics problems.

LO3 Respond to the procedure that has been given in laboratory as a team.

LO4 Interpret the experimental data accordingly and to report the results in the appropriate scientific manner.

SYNOPSIS

This course introduces the basic properties of fluids. It covers the definition to the pressure, heads, the derivation of hydrostatic equation and its application in pressure measurement, static forces analysis on immersed surface and also buoyancy analysis. The course also introduces fluid dynamics, fluid flow analysis, derivation of flow equations, the application of the energy equation,

Bernouli equation in the calculation of flow velocity, discharge, heat lost in piping systems, dimensional analysis and also its application.

DMCM 3723: MECHANICS OF MACHINE

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify the relevant mechanism in common mechanical machines.
LO2 Understand the related problem solving techniques in analyzing mechanical systems.
LO3 Implement the analysis of power and motion transmissions in machinery.
LO4 Demonstrate appropriate test methods in determining mechanical properties.

SYNOPSIS

This course will cover the power transmission system (belt drive, gears application, gear efficiency), Dynamic system balancing (rotor balancing such as planar and multi planar and reciprocating balancing such as in-line engine, radial and V-engine), Governors (Flywheel and Porter governor), Gyroscope, Free vibration (pendulum system, spring-mass system and shaft-inertia system by using energy conservation method, equivalent method and Newton's Law method), Free vibration with viscous damping (basic principle).

DENG 2223: ELECTRONIC & MICROPROCESSOR FUNDAMENTALS

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Solve basic electrical circuit problem using circuit analysis theory and techniques
LO2 Explain the numbering systems and the architecture of microprocessor
LO3 Construct simple electric and logic circuits through lab sessions
LO4 Perform assignments individually or in groups effectivelyDescribe and identify the application of digital circuits in microprocessor.

SYNOPSIS

This course will be divided into two sections; basic electronics and microprocessor technology. The first section covers the topic on concept and function of electronic components in a computer system (resistor, capacitor, inductor, transformers, fuse, cable, diode, and transistor). The next section will deal with topics such as system numbers, logic gates, Boolean operation, combination logic (type of flip flop), register and digital circuit application in microprocessor.

DMCD 2512: OCCUPATIONAL SAFETY AND HEALTH (OSH)

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Identify the different requirements and regulations of safety legislation and codes of practice
LO2 Identify the various safety, health, and environment hazards that affect human being.
LO3 Apply various requirements on safety and health principles on the working environment that is related to mechanical engineering

SYNOPSIS

The basic principles of occupational safety and health is discussed in this course. The subject of occupational safety and health (OSH) is significant to the engineering field owing to the rapid technological changes, which have introduced new hazards in the workplace.

DMCU 2992: DIPLOMA PROJECT II

At the end of this course, students should be able to:

LO1 Carry out project management based on the principle of engineering.
LO2 Conduct the fabrications method to meet objectives of the project.
LO3 Conduct the functionality test of the fabricated product.
LO4 Present a full project report in written and oral forms.

SYNOPSIS

The student continues the project activities according to the design and analysis done in Project I BMCU 2982 in the previous semester. The Project II activities cover the fabrication of the design done and followed by presenting the product in a report. The students must also present and defend the functionality of the product in an oral presentation during the exhibition.

YEAR 3 COURSES - COMMON CORE

DMCU 2968: INDUSTRIAL TRAINING

LEARNING OUTCOMES

At the end of this course, students should be able to:

LO1 Describe relevant process in company through report writing, interview and presentation session.

LO2 Apply theory and skills acquired in class, workshop and labs in actual industrial environment.

LO3 Solve the given technical problem during the industrial training.

LO4 Cooperate in a team and contribute to project outcome.

LO5 Adopt professional practice and ethics in work. Obey company rules and regulations.

LO6 Seek additional relevant information from various sources related to the problem independently to make improvement.

SYNOPSIS

All students are required to undergo industrial training as part of their curiculum to complete their three (3) years course for the Diploma of Mechanical Engineering. It is compulsory for all diploma program students to undergo the Industrial Training Programme. Duration of the training is 16 weeks and it will be taken place during semester 5.

REFERENCE

UTeM Guideline Handbook for Industrial Training.

5 ACADEMIC SYSTEM GUIDELINE

5.1 Study Period

The maximum study period in semester system for the normal entry students are 12 semesters for Bachelor of Mechanical Engineering with Honours and Bachelor of Automotive Engineering with Honours. For Diploma of Mechanical Engineering, the maximum study period in semester system for the normal entry students is 10 semesters.

Maximum study period in semester system for Bachelor and Diploma Programmes are shown in **Table 5.1** and **Table 5.2**, respectively.

Table 5.1 Maximum study period for Bachelor Programme

Entry Method	Entry to year	Maximum Study Period in Semester System
Normal Entry	1	12
Direct Entry	2	10

Table 5.2 Maximum study period for Diploma Programme

Entry Method	Entry to year	Maximum Study Period in Semester System
Normal Entry	1	10

5.2 Credit for Study Progress

The status of a student's academic year is based on the total Credit Earned, KD (Kredit Dapat). The formula to determine the status of academic year is as follows:

$$KD \geq JKL - 6$$

where JKL = Total Number of Regular Credits (Jumlah Kredit Lazim) decided by the faculty.

Table 5.3 and **Table 5.4** shows the credit for study progress and the procedure to promote to the next academic year for Bachelor of Mechanical Engineering with Honours (BMCG) and Bachelor of Automotive Engineering with Honours (BMCK) programmes, respectively.

Table 5.3 Credit for Study Progress Details for Year Promotion (BMCG)

Academic Year	Semester	Credit Load	JKL	Total KD for Year Promotion
YEAR 1	Sem. 1	16	32	26 promote to YEAR 2
	Sem. 2	16		
YEAR 2	Sem. 3	17	65	59 promote to YEAR 3
	Sem. 4	16		
YEAR 3	Sem. 5	17	104	98 promote to YEAR 4
	Sem. 6	17		
	Special Sem.	5		
YEAR 4	Sem. 7	16	135	End of Study
	Sem. 8	15		

Table 5.4 Credit for Study Progress Details for Year Promotion (BMCK)

Academic Year	Semester	Credit Load	JKL	Total KD for Year Promotion
YEAR 1	Sem. 1	17	34	27 promote to YEAR 2
	Sem. 2	17		
YEAR 2	Sem. 3	16	67	60 promote to YEAR 3
	Sem. 4	17		
YEAR 3	Sem. 5	16	103	97 promote to YEAR 4
	Sem. 6	15		
	Special Sem.	5		
YEAR 4	Sem. 7	16	135	End of Study
	Sem. 8	16		

Table 5.5 shows the credit for study progress and the requirement to promote to the next academic year for Diploma of Mechanical Engineering.

Table 5.5 Credit for Study Progress Details for Year Promotion (Diploma of Mechanical Engineering)

Academic Year	Semester	Credit	JKL	Total KD for Year Promotion
Year 1	Sem. 0	6	48	42 promote to year 2
	Sem. 1	18		
	Sem. 2	17		
	Special Sem.	7		
Year 2	Sem. 3	18	83	77 promote to year 3
	Sem. 4	17		
Year 3	Sem. 5	8	91	End of study

5.3 Teaching and Learning

Teaching and learning (T&L) activities are conducted in Semester 1 and Semester 2 every year. The T&L activities are planned by Academic Management Division (BPA) on yearly basis and presented in the academic calendar. The academic calendar shows the detail of T&L activities including lectures, semester break, final examination and etc.

Teaching and learning are based on specific recognized techniques by which the knowledge is conveyed in an effective manner to the students. The programme will adopt a unique strategy for effective teaching and learning that includes the following aspects:

a. Computer-based teaching

This is based on teaching process through computer-based knowledge presentation and computer-based interactions for knowledge acquisition. The objective is to teach the students through the optimum usage of computer to help them acquire specific information on any topic of interest and develop understanding on specific knowledge in any particular course. Example of related course is Computer Programming.

b. Problem-based learning

Problem-based learning is an instructional approach that has been used successfully for over 30 years and continues to gain acceptance in multiple disciplines including mechanical engineering. It is an instructional (and curricular) learner-centered approach that empowers learners to conduct research, integrate theory and practice, and apply knowledge and skills to develop a viable solution to a defined problem. This experience will help elucidate how actual engineering problems are solved. The example of course is Mechanical Design.

c. Project-based learning

Project Based Learning is a teaching method in which students gain knowledge and skills by working for an extended period of time to investigate and respond to an engaging and complex engineering questions and problems. The example of course is Integrated Design Project (IDP).

d. Simulation

Simulation-based teaching is another teaching practiced by UTeM academic staff in conducting lectures, tutorials and laboratory sessions. This technique aims at supporting the tutorials and laboratory sessions by facilitating a better understanding on the course materials. It consolidates the learning process of the course. Simulation is more relevant to the physical modelling of the problems in certain domains such as those involving dangerous, intricate or expensive processes. Examples of courses using this technique are Computer Aided Design and Manufacturing, Mechanism Design and Vehicle System Modelling & Simulation.

e. Industrial application software

In addition to the normal educational software, specific industry application software, are also used for teaching and learning activities. Lecturers and tutors apply industry-based software packages in their respective courses to expose students to the use of industry-related tools. The industry-based and academic-based teaching and learning tools are combined for the purpose of enriching students' technical competencies in the courses studied. The examples of the related softwares are Solidworks, AutoCAD, ANSYS, ABAQUS and MATLAB & SIMULINK.

f. Industrial exposure

Industrial exposure is also given to students. Arrangement is made to enable students of the department to have visit to various relevant manufacturing and engineering companies. These educational visits give the opportunity to students to have some ideas of how engineering knowledge is applied in the industries. Apart of that, there are several technical talks organized by the faculty. The speakers that are invited have vast experience in the industry.

g. Projects

It is a learning technique based on conducting specific activities in order to find out the solution of a problem under consideration. This learning process may involve theoretical, experimental, simulation, industrial exposure, industrial application software and any other teaching and learning techniques practiced. Conducting a

project is one of the ways to solve an outstanding problem. It is therefore one of the more effective teaching and learning techniques adopted by UTeM. Final Year Project (*Projek Sarjana Muda*) and Diploma Project (Projek Diploma) are the best example of this method. Projects allows students to apply the basic engineering problem solving skills, which they have learned before.

h. Online learning

As a move towards digitalized learning, online learning is also introduced. In this strategy, the students have the flexibility to study learning materials through the internet with constant monitoring from lecturers. The official learning platform in UTeM is ULearn which can be accessed through https://ulearn.utem.edu.my.

i. Tutorials

Tutorials are carried out regularly to provide continuous exercise/practice to enhance students' understanding after lecture on each chapter had been completed. In addition to lectures and other activities, tutorial adds up to the required student learning time.

5.4 Assessment

The assessment on learning outcomes in semester system is performed continuously based on the students' works during the lecture weeks in a semester. Students are expected to be ready for any kind of assessment being held during the semester. The methods for assessment are through coursework and final semester examination. The final examination is comprehensive in the sense that it covers the entire syllabus of a course learned in the semester. The coursework assessment is a continuous process carried out to evaluate student's performance throughout the semester. Coursework encompasses, among others, Problem Based Learning (PBL), quiz, mid semester examination, assignment, practical work, project, case studies, industrial visit etc.

5.4.1 Coursework

Coursework is assessed by not more than 40% for degree programme and 60% for diploma programme. Normally the coursework is categorized as:

a. Mid Semester Test

Mid semester test is conducted to find out what the students have learned during the first half of the semester. The format of the test may be in form of multiple choice questions, calculation or open-ended questions. The processes of conducting the mid semester test is similar to the final examination procedures. The marks allocated for this test is 20% to 30% of the overall marks. Generally, the duration of the test is from 1 hour to 1.5 hours. The tentative date of the test will be announced in the teaching plan which is distributed during the first lecture.

b. Quizzes

Quizzes consist of short questions, objective questions, questions with "fill in the blanks" techniques or simple question/calculations which are designed to evaluate students' understanding during the lecture. Time allocated is approximately 15 minutes.

c. Projects

Project or assignment is an efficient way to strengthen the understanding of students for a particular course. It also provides research skill to the students. Project involves activities, such as literature survey, methodology and some design stages. The project generally requires the students to apply the theory in the real engineering field. At the end of the project, students must submit a project report and present the project.

d. Assignments / Lab Report

Assignments or Lab Report are for training individual students for using references and research works and able to present their works in an academic report form. It is also formulated for training the students in solving problems related to the topic given and hence updating students' lecture notes. Coursework could be given to the students in several forms:

i. Design, essay forms or report on specific topic;

ii. Research works through references, computer software and programming for problem solving.

iii. Technical report i.e. formal report for experiment/practical works.

The laboratory works are either in the form of prescriptive work (diploma) or open-ended (bachelor).

Other kinds of assessments on coursework can also be considered upon faculty approval.

5.4.2 Final Examination

The Final Examination is held for two weeks at the end of the semester. It is the final evaluation on courses as set by the Faculty. For bachelor's degree programme, the weightage of the Final Examination shall be no less than 60%. On the other hand for the diploma programme, the Final Examination shall be no less than 40%. The duration of the Final Examination depends on the credit hours of the course.

5.4.2.1 Conditions for Final Examination

Students are expected to attend all lectures being held in the semester. The student whose attendance is less than 80% from the total lecture hours of any course may be barred from sitting for the final examination. This regulation can be referred to the Guidelines for the Academic Regulation System, UTeM.

5.4.2.2 Special Examination

Students are allowed to request for a Special Examination of a course subject to approval of the Senate. The Academic Management Division will send an official letter to the faculty to offer and run the special examination to the affected students. The special examination for Semester I shall be no later than 2 weeks after Semester II begins. For the semester II, the special examination should be held no later than 3 weeks after the Semester II examination's result is released.

Special examination is carried out during the semester break for the student with medical reason and for the final semester student based on the following cases:

a. Medical Reason

   i. Student who is unable to sit for the Final Examination after being issued a Medical Certificate by the University Medical Officer or a Government Hospital/ Clinic, must submit the Medical Certificate to the Faculty within 24 hours after the start of the Final Examination of a course, unless there is a reason acceptable to the University. If the Medical Certificate is from a Private Hospital/ Clinic, it must be verified by the University Medical Officer or a Government Hospital/ Clinic.

   ii. The student's result states Incomplete (TS) until the results of the Special Examination is announced.

   iii. Special Examination results will be counted in the calculation of the Credit Earned and Credit Counted in determining the GPA, CGPA and Academic Standing.

b. Cases of the Final Semester Student

   i. Final semester student who has passed with Good Academic Standing (KB) but has failed one repeated course with the condition that the student has repeated the same course everytime it was offered.

   ii. The Special Examination results shall be stated in the examination result's transcript as "Special Examination Passed (LPK)" with HL grade for those who passed or "Special Examination Failed (GPK)" with HG grade for those who failed the course. If the student passes, the course credit will be counted as Credit Earned but not counted in the calculation of the GPA and CGPA. The original coursework marks shall not be considered.

   iii. If the student fails, the candidate will have to repeat the course in the next semester when offered and the student will have to register as full-time student as long as he/she has not utilized the maximum duration of study.

   iv. The Faculty has the authority to register the student as Special Student. It is not compulsory for the student to attend any teaching and learning activities. The assessment will be based on previous semester's coursework marks and final examination marks of the current semester.

v. Special examination is not applicable for course that is assessed by 100% coursework.

5.5 Grading System

Student's performance in a course is evaluated based on the grade obtained. Grading system is shown in **Table 5.6**. Generally, minimum passing grade for a course is Grade D. However, Grade D up to C- are categorised as Conditional Pass and the students are allowed to improve their grade by repeating the course only once.

Table 5.6 Grading System

Grade (Achievement)	Relations Between Marks And Grade Point Value	
	Marks Percentage	Grade Point Value
A (Distinction)	80 – 100	4.0
A- (Distinction)	75 – 79	3.7
B+ (Credit)	70 – 74	3.3
B (Credit)	65 – 69	3.0
B- (Pass)	60 – 64	2.7
C+ (Pass)	55 – 59	2.3
C (Pass)	50 – 54	2.0
C- (Conditional pass)	47 – 49	1.7
D+ (Conditional pass)	44 – 46	1.3
D (Conditional pass)	40 – 43	1.0
E (Fail)	0 – 39	0.0

The status for each course is summarized in **Table 5.7**.

Table 5.7 Course Status

Grade/ Status Acronym	Explanations
HW = Compulsory Attendance Courses (*Matapelajaran Hadir Wajib*)	HW status is given to the course that the credit is not counted in the GPA and CGPA calculations but counted for KD. For this course, the results are graded as Attendance Pass, HL (*Hadir Lulus*) or Attendance Fail, HG (*Hadir Gagal*)
UM = Repeat Course (*Ulang Matapelajaran*)	UM status is given to the course that is repeated by the students who failed in that course previously. The credits for UM will not be counted for CGPA calculations.
HWUM = Compulsory Attendance Repeat Course (*Hadir Wajib Ulang Matapelajaran*)	HWUM status is given to the Compulsory Attend course for students who previously failed the course.
UG = Repeat Grade (*Ulang Gred*)	UG status is given to the repeated course for students who want to improve their grade.
TM = Redeem Course (*Tebus Matapelajaran*)	TM status is given to the course for repeating student who holds Conditional Academic Standing (KS).

The academic standing for each student is determined by the examination results obtained at the end of every semester. The status is shown in **Table 5.8**.

Table 5.8 Academic Standing

Grade/Status Acronym	Explanations
KB = Good Academic Standing (*Kedudukan Baik*)	Students with CGPA ≥ 2.00
KS = Conditional Academic Standing (*Kedudukan Bersyarat*)	Students with CGPA 1.70 ≤ CGPA < 2.00
KG = Failed Academic Standing (*Kedudukan Gagal*)	Students with CGPA < 1.70, or students with KS three times consecutively
TD = Course Withdrawal (*Tarik Diri*)	Students withdrew from any registered course except for University Compulsory course
TS = Incomplete (*Tidak Selesai*)	Students unable to sit an examination due to illness certified by Medical Officer
KBA = Good Academic Standing Award (*Kedudukan Baik Anugerah*)	Students pass all the required courses and obtain KB.
KBTT = Elapsed Good Academic Standing *(Kedudukan Baik Tamat Tempoh)*	Students utilized maximum duration of study but do not pass all the required courses as well as do not achieve KB in final semester.

5.6 Credit Transfer

Student can apply for credit transfer if they pass the same or equivalent course or possess experiences recognized by the faculty. Credit transfer can be granted to the student who had passed with minimum grade of C according to the University grading system. The application for credit transfer must be done within 2 weeks after the beginning of the first semester. The policy is as follows:

a. Credit transfer is a total credit that has been approved to the student based on certain courses taken by him/her at any other Institution of Higher Learning (IHL) either local or overseas. All the courses taken must be recognized by the university as equivalent and fulfil the curriculum of the chosen programme.

b. Credit transfer can be granted to the student that has taken the similar course and pass according to the UTeM grading system provided that the course content is 80% equivalent.

c. Educational level permitted for credit transfer must be equivalent with UTeM educational programme curriculum in terms of academic load and credit hours calculation.

d. With University's permission, students are allowed to take course in other IHL and can apply for credit transfer for those courses. The approved credit transfer will be accounted into their GPA and CGPA calculations.

e. Students are not allowed to complete their final semester study in other IHL.

f. The approval of credit transfer application will be announced to the students by the Academic Management Division *(BPA)*. Granted credit transfer courses are recorded in the *Sistem Maklumat Pelajar* (SMP).

NOTE:

Any conflict in the interpretation of the above mentioned policy must be referred to The Academic Rules and Regulations for the Bachelor Degree and Diploma Programmes.

5.7 Credit Exemption

Credit exemption can be granted to the student who has taken similar and equivalent course and passed with respect to UTeM grading system. Application for credit exemption must be done within two (2) weeks after the beginning of the first semester.

a. Provision for the Credit exemption is outlined in the Academic Regulations and Guidelines for the Academic Regulations Systems (Bachelor Degree & Diploma Programme) to shorten the duration of study.
b. Credit exemption is a total credit that has been exempted for degree/diploma award that is granted based on the diploma qualification or equivalent experience that is recognised by the University.
c. The maximum credit exemption allowed must not exceed 30% of the overall credit required for a programme.
d. The application for credit exemption must be submitted to FKM within the first two (2) weeks of the first semester.
e. Credit exemption can be granted to student who has taken the same course or equivalent and passed with the minimum grade of C+ according to the university grading system with the condition that the course contents is 80% equivalent.
f. Educational level permitted for credit exemption must be equivalent to the UTeM educational programme curriculum in terms of academic load and credit hours calculation.
g. A transfer student from other IHL either local or overseas is eligible to apply for credit exemption. Upon submission, FKM will determine the courses that can be exempted.
h. For the award of degree, the total credit gain needed for credit exempted-students is the difference between the overall credit and the exempted credit.
i. The approval of credit exemption application will be announced to the students by the Academic Management Division (BPA). Granted credit transfer courses are recorded in the SMP.
j. The combination of credit exemption and credit transfer must **not exceed 30%** of the total credit stipulated for the award of the degree programme.

5.8 Grade Point Average

GPA (Grade Point Average) is an average grade point values earned by a student in a semester. It is calculated as below:

Total Grade Point Value / *Jumlah Mata Nilai, (JMN)* = $k_1 m_1 + k_2 m_2 + \ldots\ldots + k_n m_n$

Total Credit Counted / *Jumlah Kredit Kira, (JKK)* = $k_1 + k_2 + \ldots\ldots + k_n$

$$GPA = \frac{JMN}{JKK}$$

$$= \frac{k_1 m_1 + k_2 m_2 + \ldots + k_n m_n}{k_1 + k_2 + \ldots + k_n}$$

where

k_n = Credit for n^{th} course.

m_n = Grade point value earned for n^{th} course.

Example 1 GPA Calculation

BMCG YEAR 1 (SEMESTER 1)

CODE	COURSE	GR	MN	KR	JMN	ST
BLLW 1142	ENGLISH FOR ACADEMIC PURPOSE	A	4.0	2	8.0	
BIPW 1132	PHILOSOPHY AND CURRENT ISSUES	B+	3.3	2	6.6	
BMFG 1313	ENGINEERING MATHEMATICS I	C	2.0	3	6.0	
BMCG 1523	ENGINEERING GRAPHICS AND CAD	B-	2.7	3	8.1	
BMFG 1213	ENGINEERING MATERIALS	A	4.0	3	12.0	
BMCG 1113	STATICS	B	3.0	3	9.0	
	TOTAL			**16**	**49.7**	

	CURRENT SEMESTER	ALL SEMESTER
KD	16	16
KP		0
KK	16	16
JMN	49.7	
GPA	3.11	
CGPA		3.11
FINAL RESULT		
Good Academic Standing (KB)		

GPA for Semester 1

Total Grade Point Value (JMN) = 49.7
Total Credit Counted (JKK) = 16
GPA = 49.7 / 16 = 3.11

5.9 Cumulative Grade Point Average

CGPA (Cumulative Grade Point Average) is an average grade point earned by a student through out all semesters undertaken. It is calculated as below:

$$CGPA = \frac{(JMN)_1 + (JMN)_2 + ... + (JMN)_n}{(JKK)_1 + (JKK)_2 + ... + (JKK)_n}$$

where

$(JMN)_n$ = Total grade point value earned in n^{th} semester.
$(JKK)_n$ = Total credit counted in n^{th} semester.

Example 2 CGPA Calculation

BMCG YEAR 1 (SEMESTER 2)

CODE	COURSE	GR	MN	KR	JMN	ST
BKKX XXX1	CO-CURRICULUM I	B+	3.3	1	3.30	
BMCG 1013	DIFFERENTIAL EQUATIONS	B	3.0	3	9.00	
BEKG 1233	PRINCIPLES OF MEASUREMENT AND INSTRUMENTATION	C-	1.7	3	5.10	
BMCG 2713	THERMODYNAMICS I	A	4.0	3	12.00	
BMCG 1213	DYNAMICS	E	0.0	3	0.00	
BMCG 2021	MECHANICAL ENGINEERING WORKSHOP	B-	2.7	1	2.70	
BMCG 2312	MANUFACTURING PROCESS	C+	2.3	2	4.60	
	TOTAL			**16**	**36.7**	

	CURRENT SEMESTER	ALL SEMESTER
KD	13	29
KP		0
KK	16	32
JMN	36.7	86.4
GPA	2.29	
CGPA		2.70
FINAL RESULT		
Good Academic Standing (KB)		

*Continuation from Example 1

GPA for Semester 2

Total Grade Point Value (JMN) = 36.7
Total Credit Counted (JKK) = 16
GPA = 36.7 / 16 = 2.29

CGPA for all semesters (1 and 2)

Total Grade Point Value (JMN) = 49.7 + 36.7 = 86.4
Total Credit Counted (JKK) = 16 + 16 = 32
CGPA = 86.4 / 32 = 2.70

5.10 Course Withdrawal

The students are entitled to Course Withdrawal (TD) from any course if they feel that their performance is poor. **The last date for course withdrawal is in week thirteen (13).** The students are allowed to sit or repeat the course if it is offered by the faculty. With the verification from the Academic Advisor, students can withdraw any registered course provided that the minimum load of 12 credit hours remains.

If the credit hour taken is less than 12 credits and the student decided to withdraw any course, the Faculty's Dean approval is required.

The normal guideline for course withdrawal is as follows:

a. Course withdrawal is allowed within the period regulated by the University. Withdrawal is not encouraged as it reflects the student's weaknesses in planning for course enrolment and failure to follow the projected credit hours. The Course Withdrawal (TD) status will be printed in the programme registration slip and final transcript.
b. The student is not allowed to withdraw any co-curriculum course.
c. The students are required to re-register for the course that they had withdrawn, except the elective course which can be substituted with other elective courses.
d. Any tuition fees paid (if relevant) prior to withdrawal, will not be refunded.

Below are examples of student who wants either to withdraw or continue taking any particular course during the same semester as shown in Examples 5 and 6.

Students who withdraw the course (i.e. BMCG 2113) will be exempted from taking the final examination and the credit hour for that course will not be considered in the GPA calculation for that particular semester.

Example 3 Course Withdrawal GPA Calculation

BMCG YEAR 2 (SEMESTER 3)

CODE	COURSE	GR	MN	KR	JMN	ST
BIPW 2132	APPRECIATION OF ETHICS AND CIVILIZATION	A-	3.7	2	7.4	
BEKG 2443	ENGINEERING MATHEMATICS II	A	4.0	3	12.0	
BEKG 1123	PRINCIPLES OF ELECTRIC AND ELETRONICS	C	2.0	3	6.0	
BMCG 1011	MECHANICAL ENGINEERING LABORATORY I	C	2.0	1	2.0	
BMCG 2113	SOLID MECHANICS I	TD	-	-	-	
BMCG 2613	FLUID MECHANICS I	C	2.0	3	6.0	
BLLW 1XX2	LANGUAGE ELECTIVE	B	3.0	2	6.0	
	TOTAL			**14**	**39.4**	

	CURRENT SEMESTER	ALL SEMESTER
KD	14	43
KP		0
KK	14	46
JMN	39.4	125.8
GPA	2.81	
CGPA		2.73
FINAL RESULTS		
Good Academic Standing (KB)		

*Continuation from Example 2

GPA for Semester 3

Total Grade Point Value (JMN) = 39.4
Total Credit Counted (JKK) =14
GPA = 39.4 / 14 = 2.81

CGPA for all semester (1, 2 dan 3)

Total Grade Point Value (JMN) = 49.7 + 36.7 + 39.4 = 125.8
Total Credit Counted (JKK) = (16+ 16) + 14 = 46
CGPA = 125.8 / 46 = 2.73

Example 4 GPA Calculation if the Student Continue Taking the Course (No Withdrawal)

For student who decided NOT to withdraw the course (i.e BMCG 2113) then the credit hours for that course will be counted for the GPA calculation for Semester 3.

BMCG YEAR 2 (SEMESTER 3)

CODE	COURSE	GR	MN	KR	JMN	ST
BIPW 2132	APPRECIATION OF ETHICS AND CIVILIZATION	A-	3.7	2	7.4	
BEKG 2443	ENGINEERING MATHEMATICS II	A	4.0	3	12.0	
BEKG 1123	PRINCIPLES OF ELECTRIC AND ELETRONICS	C	2.0	3	6.0	
BMCG 1011	MECHANICAL ENGINEERING LABORATORY I	C	2.0	1	2.0	
BMCG 2113	SOLID MECHANICS I	E	0.00	3	0.0	
BMCG 2613	FLUID MECHANICS I	C	2.0	3	6.0	
BLLW1XX2	LANGUAGE ELECTIVE	B	3.0	2	6.0	
	TOTAL			**17**	**39.4**	

	CURRENT SEMESTER	ALL SEMESTER
KD	14	43
KP		0
KK	17	49
JMN	39.4	125.8
GPA	2.32	
CGPA		2.57
FINAL RESULTS		
Good Academic Standing (KB)		

GPA for Semester 3

Total Grade Point Value (JMN) = 39.4
Total Credit Counted (JKK) = 17
GPA = 39.4 / 17 = 2.32

CGPA for all semester (1, 2 and 3)

Total Grade Point Value (JMN) = 49.7 + 36.7+ 39.4 = 125.8
Total Credit Counted (JKK) = (16+ 16) + 17 = 49
CGPA = 125.8 / 49 = 2.57

Examples 3 and 4 have shown that the student's results are affected when the student decides to either withdraw (TD) or continue taking the course. In Example 4, the student's GPA will be drastically dropped to 2.32 as compared to 2.81 in Example 3. The withdrawal will also affect the CGPA from 2.73 to 2.57. Therefore, the student has to consider carefully when deciding whether or not to withdraw.

5.11 Course Repeating

Students are allowed to repeat any failed course if the course is offered by the faculty. The repeating grade will be the official grade in the transcript if it is higher than the previous one, otherwise the previous grade prevails.

Referring to Examples 2 and 3, assuming that the student wants to resit for BMCG 1213, CGPA calculation is shown as below:

Example 5 CGPA Calculation for Resitting

BMCG YEAR 2 (SEMESTER 4)

CODE	COURSE	GR	MN	KR	JMN	ST
BLLW 2152	ACADEMIC WRITING	A-	2	3.7	7.4	
BKKX XXX1	CO-CURRICULUM II	B+	1	3.3	3.3	
BENG 2143	ENGINEERING STATISTICS	B-	3	2.7	8.1	
BEKG 2433	ELECTRICAL SYSTEMS	B+	3	3.3	9.9	
BMCG 2011	MECHANICAL ENGINEERING LABORATORY II	A	1	4.0	4.0	
BMCG 3113	SOLID MECHANICS II	C+	3	2.3	6.9	
BMCG 2513	COMPUTER AIDED DESIGN AND MANUFACTURING	B+	3	3.3	9.9	
BMCG 1213	DYNAMICS	C+	3	2.3	6.9	UM
	TOTAL		**19**		**56.4**	

	CURRENT SEMESTER	ALL SEMESTER
KD	19	62
KP		0
KK	19	65
JMN	56.4	182.2
GPA	2.97	
CGPA		2.94
FINAL RESULTS		
Good Academic Standing (KB)		

GPA for Semester 4

Total Grade Point Value (JMN) = 56.4
Total Credit Counted (JKK) = 19
GPA = 56.4 / 19 = 2.97

CGPA for all semesters (1, 2, 3 and 4)

Total Grade Point Value (JMN) = 49.7 + 36.7 + 39.4 + 56.4 = 182.2

	Total Credit Counted (JKK) = 16 + 16 + 14 + 19 - 3 = 62 CGPA = 182.2 / 62 = 2.94

For CGPA calculation, the course BMCG 1213 is a repeat course (from Semester 2 and the previous grade obtained is E). The previous grade and credit (3) should be discarded for the CGPA calculation in Semester 4.

5.12 Failed Academic Standing (KG)

Example 6 Failed Academic Standing (KG) - Dismissal

BMCG YEAR 1 (SEMESTER I)

CODE	COURSE	GR	MN	KR	JMN	ST
BLLW 1142	ENGLISH FOR ACADEMIC PURPOSE	C-	1.7	2	3.4	
BIPW 1132	PHILOSOPHY AND CURRENT ISSUES	C-	1.7	2	3.4	
BMFG 1313	ENGINEERING MATHEMATICS I	D+	1.3	3	3.9	
BMCG 1523	ENGINEERING GRAPHICS AND CAD	C-	1.7	3	5.1	
BMFG 1213	ENGINEERING MATERIALS	D	1.0	3	3.0	
BMCG 1113	STATICS	D	1.0	3	3.0	
	TOTAL			**16**	**21.8**	

	CURRENT SEMESTER	ALL SEMESTER
KD	16	16
KP		0
KK	16	16
JMN	21.8	21.8
GPA	1.36	
CGPA		1.36
FINAL RESULTS		
Failed Academic Standing (KG)-Dismissal		

GPA for Semester 1

Total Grade Point Value (JMN) = 21.8
Total Credit Counted (JKK) = 16
GPA = 21.8 / 16 = 1.36

In Example 6, the GPA and CGPA of the student is 1.36. Even if the student passed all the courses with a minimum of D grade, the student will still be dismissed since CGPA is less than 1.70.

5.13 Conditional Academic Standing (KS)

Example *7* Conditional Academic Standing (KS)

BMCG YEAR 1 (SEMESTER I)

CODE	COURSE	GR	MN	KR	JMN	ST
BLLW 1142	ENGLISH FOR ACADEMIC PURPOSE	C-	1.7	2	3.4	
BIPW 1132	PHILOSOPHY AND CURRENT ISSUES	C	2.0	2	4.0	
BMFG 1313	ENGINEERING MATHEMATICS I	C-	1.7	3	5.1	
BMCG 1523	ENGINEERING GRAPHICS AND CAD	C	2.0	3	6.0	
BMFG 1213	ENGINEERING MATERIALS	D+	1.3	3	3.9	
BMCG 1113	STATICS	C-	1.7	3	5.1	
	TOTAL			**16**	**27.5**	

	CURRENT SEMESTER	ALL SEMESTER
KD	16	16
KP		0
KK	16	16
JMN	27.5	27.5
GPA	1.72	
CGPA		1.72
FINAL RESULTS		
Conditional Academic Standing (KS)		

GPA for Semester 1

Total Grade Point Value (JMN) = 27.5
Total Credit Counted (JKK) = 16
GPA = 27.5 / 16 = 1.72

Conditional Academic Standing is the result for students who gets CGPA below 2.00 but not in KG status ($1.70 \leq CGPA < 2.00$). The student is allowed to continue the study with a maximum of 12 credit hours for the following semester until the student achieve Good Academic Standing (KB).

Normally the sponsors have the right to suspend the financial support for the students until they improve their study by getting CGPA > 2.0. If the Conditional Academic Standing (KS) is repeated 3 times consecutively, then the candidate will be dismissed.

5.14 Good Academic Standing (KB)

Example 8 Good Academic Standing (KB)

BMCG YEAR 1 (SEMESTER 1)

CODE	COURSE	GR	MN	KR	JMN	ST
BLLW 1142	ENGLISH FOR ACADEMIC PURPOSE	E	0.0	2	0.0	
BIPW 1132	PHILOSOPHY AND CURRENT ISSUES	B+	3.3	2	6.6	
BMFG 1313	ENGINEERING MATHEMATICS I	B+	2.0	3	6.0	
BMCG 1523	ENGINEERING GRAPHICS AND CAD	B+	2.7	3	8.1	
BMFG 1213	ENGINEERING MATERIALS	A-	4.0	3	12.0

CGPA		2.79
FINAL RESULTS		
Good Academic Standing (KB)		

GPA for Semester 1

Total grade points (JMN) = 44.7
Total calculated credit (JKK) = 16
GPA = 44.7 / 16 = 2.79

This student passed 5 (KD = 14) out of 6 courses (KK = 16) taken. The student obtained KB with GPA = 2.79.

But he/she failed in the BLLW 1142 English for Academic Purpose course, which is the pre-requisite for BLLW 2152 Academic Writing. The student **MUST RESIT** the BLLW 1142 English for Academic Purpose course until he/she get at least a minimum of D grade in order to take

BLLW 2152 Academic Writing course. The student may be expected to extend his/her duration of study, depending on the total credit hours required to graduate.

5.15 Dean's List Award

Example 9 Good Academic Standing (KB) with Dean's List Award

BMCG YEAR 1 (SEMESTER I)

CODE	COURSE	GR	MN	KR	JMN	ST
BLLW 1142	ENGLISH FOR ACADEMIC PURPOSE	A	4.0	2	8.0	
BIPW 1132	APPRECIATION OF ETHICS AND CIVILIZATION	A-	3.7	2	7.4	
BMFG 1313	ENGINEERING MATHEMATICS I	B+	3.3	3	9.9	
BMCG 1523	ENGINEERING GRAPHICS AND CAD	A	4.0	3	12.0	
BMFG 1213	ENGINEERING MATERIALS	B+	3.3	3	9.9	
BMCG 1113	STATICS	A-	3.7	3	11.1	
	TOTAL			**16**	**58.3**	

	CURRENT SEMESTER	ALL SEMESTER
KD	16	16
KP		0
KK	16	16
JMN	58.3	58.3
GPA	3.64	
CGPA		3.64
FINAL RESULTS		
Good Academic Standing (KB)		

GPA for Semester 1

Total grade points (JMN) = 58.3
Total calculated credit (JKK) = 16
GPA = 58.3/ 16 = 3.64

Example 9 above shows an excellent result obtained by the student. With GPA $\geq$ 3.5, the student will be awarded with Dean's List Award for his/her outstanding achievement which will be stated in the result transcript.

5.16 Graduation Requirements and Class

Students deserve to be awarded with certificate (Bachelor's Degree/Diploma) upon satisfying the following requirements:

a. Student must obtain a Good Academic Standing (KB) in the final semester.

b. Student has passed all courses required by the programme and obtained Good Academic Standing Award (KBA). Please refer to **Table 5.9** for total credit numbers based on course categories for KBA.

Table 5.9 Credit number for Graduation status

Course Category	University Compulsory Course	Common Core Course	Programme Core Course	Elective Course	Total
BMCG	18	53	52	12*	**135**
BMCK	18	50	61	6**	**135**
DMC	14	77	-	-	**91**

* 12 credits for Programme Elective, 2 for Language Elective and 2 for General / Open Elective (BMCG)

** 6 credits for Programme Elective and 2 for Language Elective (BMCK)

c. Student has applied for graduation status, approved by faculty and endorsed by University Senate.

d. Student has passed MUET and obtain band specified by the University.

e. Student has fulfilled other requirements as specified by the University.

The award of certificate will be classified according to the graduation class given in **Table 5.10** and **Table 5.11.** However, the graduation class is not stated in academic transcript.

Table 5.10 Graduation Class (Degree)

Class	Explanations
First Class with Honours	Students with CGPA ≥ 3.70
Second Class (Upper) with Honours	Students with CGPA 3.00 ≤ CGPA < 3.69
Second Class (Lower) with Honours	Students with CGPA 2.00 ≤ CGPA < 2.99

Table 5.11 Graduation Class (Diploma)

Class	Explanations
First Class	Students with CGPA ≥ 3.70
Second Class	Students with CGPA 2.00 ≤ CGPA < 3.69

6 ACADEMIC ADVISORY SYSTEM

6.1 Introduction

The Academic Advisory System is established for the purpose of providing comprehensive advice in terms of education, teaching and assessment for students during their studies in UTeM.

6.2 Academic Advisory Objectives

Students in university have life that is totally different from the school environment. Being away from family, relatives and old friends, students are required to have good self motivation in order to survive and succeed in their studies. The students are also expected to gain information and to adapt quickly with the change of rules in a campus life.

Students should therefore utilize the existence of the Academic Advisory System that can help them in their academic achievement. Academic staffs shall be regarded as a friend or mentor to seek for advice and opinion.

The objectives of Academic Advisory System are:

a. To provide a proper channel for students to obtain an advice and counselling especially on academic problem.
b. To establish two ways of communications between students and faculty/university.
c. For the advisor to recognize the students' ability and capability.
d. To produce a discipline and balance attitude of students.
e. As a platform for sharing opinion, information and giving advice on the overall aspects of the student's life in university.

6.3 Academic Advisory Structure

The faculty has set the Academic Advisory System as one of the platforms to obtain feedback from students. This is important for the continuous improvement based on the

positive as well as demanding feedback received from the students. The procedures of the Academic Advisory System are shown in **Figure 6.1**.

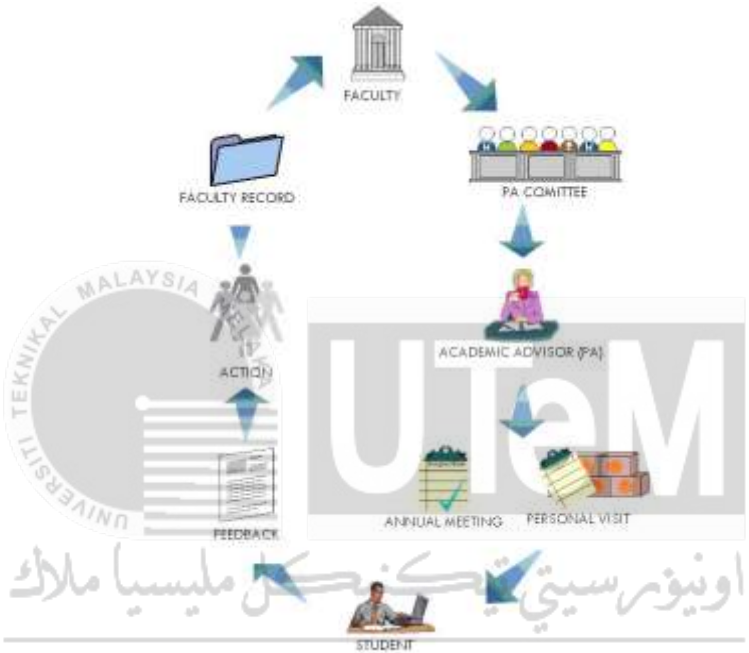

Figure 6.1 Academic Advisory System

There are two important components in the system. First is the meeting with the students to seek for feedback, and second, is for the academics to give advice and to take action related to the student's academic problem appropriately. Student's feedback can be gathered from annual meeting and/or personal meeting. All records such as student's personal and academic information are updated during the meeting and documented in the faculty.

The Academic Advisory Committee's working procedure is as follows:

a. Students will be divided into several groups consisting of 20 to 30 students. Each group is led by one Academic Advisor (Penasihat Akademik or PA). The PA is an academic staff with teaching experience.
b. PA will remain with the students until they graduate. PA shall be regarded as a mentor for the students.
c. PA keeps and updates the students' records under his/her group. These records include academic performances of the students until they graduate. The records also include feedback, application letters as well as issues relating to academic and non-academic. These records are kept by the PA for future reference.

6.4 Student's Academic Advisory Mechanism

Each academic staff should be aware of the objectives of the Academic Advisory System. Formal and informal meeting sessions are important. Students shall be responsive to the faculty's intention to help them through the following mechanism:

a. Students can meet their PA at their own initiative. More informal meetings are encouraged.
b. Formal meeting between students and PA is made by appointment or any other methods agreed.
c. Detail of the discussion is recorded for future reference.
d. Attendance is compulsory for the meeting organized by their PA.

6.5 Academic Advisor's Responsibility

PA has the responsibility to help students with poor academic achievement. Normally, good students are more approachable whilst poor students are difficult to engage for discussion and meeting. From the beginning the students must be aware that academic progress and achievement are their responsibility.

The faculty has outlined the role of PA are as follows:

a. Play an important role in giving advice, guidance and motivation to students regarding their academic and non-academic matters.

b. Monitor student's academic development, progress and performance.
c. Schedule meeting which is agreed by both parties.
d. Assist students in understanding the organization structure, method and procedure of university's administration.
e. Refer to professional counsellor in order to solve student problem, when necessary.
f. Encourage students to be involved in academic and non-academic activities organized by the university.

6.6 Student Responsibility

In the university, students are fully responsible on their achievement in their studies. The student's responsibilities are as follows:

a. Consistently meet their PA to seek for advice in solving academic and non-academic problems.
b. Discuss the study plan every semester before registering new courses for the next new semester.
c. Discuss with the PA to plan for future meeting schedule and must commit to their plan.
d. Meet the PA during free time to discuss any issue arises related to education, general knowledge, technology development and career.
e. Consider any advice given and act appropriately.
f. Regard the PA as a good friend to open-up for discussion.

6.7 Learning Guidance In University

The learning environment in university differs greatly to that in school. Students must therefore adapt to the new learning method accordingly, where most of the time, students are expected to have self motivation and self independence to learn the materials giving in the class by the lectures. Several measures on how to succeed in the university are pointed out as follows:

a. Manage time effectively. Students should participate in positive activities and stay away from being involved in any illegal activities.

b. Plan out properly for the courses to be registered for each semester by consulting the PA.
c. Choose co-curriculum and elective courses that are suitable according to own capability and interest, subjected to some faculty's arrangement.
d. Well disciplined in attending lectures, tutorials, and lab sessions.
e. Motivated and highly aspired throughout the studies in university to ensure good performance in quizzes, assignments, laboratory works, tests and final exam.
f. Avoid last-minute studying. Revision should be done on a regular basis.

7 FACILITIES AND ETHICS IN LABORATORY WORK

7.1 Overview of Facilities

The facilities of FKM include lecture rooms and laboratories, where most of the lecture rooms are located in Technology Campus. **Table 7.1** lists the locations of facilities in the main building of FKM in Technology Campus. Besides that, all Mechanical Engineering Laboratories are also located at this Technology Campus, where some buildings are behind the main building. Faculty has developed the laboratories based on the courses offered. Through these laboratories, students will be exposed to the related machine handling experience as well as practical exposure on theory proofing learned in the lecture hall. This is to prepare themselves to become not only a knowledgeable engineer but also highly competitive in application and technical aspects.

Table 7.1 Locations of Facilities in FKM

No.	Name	Location	Level
1	Administration Office	FKM Main Building (Technology Campus)	4
2	Security Office		1
3	Development Office		1
4	Student Clinic		1
5	Lecture Rooms BK1-BK10		1
6	Lecture Rooms BK11-BK17		2
7	Post Graduate Area		2
8	Faculty of Mechanical Engineering Student Association (FaMESA) room		2
9	Library		3
10	Lecturer Rooms		6 & 7
11	Lecture Rooms BK1 - BK6 (KMKM)	Mechanical Engineering Laboratory Complex	1 & 2
12	Tutorial Rooms BT1 - BT10 (KMKM)		1
13	Laboratories, Workshops & Studios		1 & 2

The entire laboratory is managed by a Lab Coordinator with the help of Field Cluster Leader appointed among the academic staff. The lab management is also supported by technical support staff led by a Unit Leader. The tools, machines and equipments of each laboratory are developed by respective departments. The Lab Management Committee is responsible for the daily usage, consumables and maintenance of the labs.

7.2 Objectives of Laboratory Work and Workshop

The faculty has developed laboratory work to enhance the understanding of the theory given during the lecture. The activities have been developed for the students so that it will not only provide better understanding of the concepts learned but also skills in handling the equipment and ability to solve the given problem. The laboratories are also utilised for research and consultation work for the public. Below are the objectives of the laboratory work:

a. To develop the interest of the students in engineering field by exposing them to the work procedure and equipment handling in solving engineering problem.
b. To relate the engineering theory by validating data obtained from the experiment.
c. To increase the tools-handling skill and understanding the concept taught during the lecture.
d. To simulate and analyse engineering problems that are based on the knowledge acquired in the lecture.
e. To build up teamwork among the students during laboratory and workshop activities.
f. To support the research activities.
g. To provide consultation work for other institutions or agencies.

7.3 Laboratory Facilities

In line with the university's aim, the development of the facilities has rapidly increased to support teaching & learning, and research activities. As the course curriculum comprises of laboratory courses, therefore the development of the laboratory shall reflect the syllabus of the course.

Most of the laboratories are equipped with state-of-the-art facilities. These facilities are used not only for teaching and learning activities, but also for research and consultation works. In line with the Engineering Accreditation Councils (EAC) requirements, the faculty managed to reduce the ratio of students to the equipments/tools down to 1:6. Besides that, the computer facilities for the students are undergoing staggered upgrading in order to achieve the ratio of 1:1 (computer: student).

The development of the FKM laboratories has been carried out progressively. **Tables 7.2** and **7.3** show the list of existing laboratories for teaching and learning as well as research in FKM. At present, 23 laboratories have been developed for teaching and learning and 21 laboratories for research activities. The laboratories, workshops and studios are located at Mechanical Engineering Laboratory Complex (F2 and F5), both within Technology Campus. Generally, each laboratory can accommodate at least 30 students at a time. Sample of laboratory facilities are shown in **Figure 7.1**.

Table 7.2 List of Laboratories for Teaching and Learning

No.	Name of Laboratory	Location
1	Computer Aided Design Studio 1	Mechanical Engineering Laboratory Complex (F5)
2	Computer Aided Design Studio 2	
3	Computer Aided Design Studio 3	
4	Computer Aided Design Studio 4	
5	Computer Aided Engineering (CAE) Studio	
6	Automotive Design Lab

7.4 Work Ethics

All students are bound to the University Regulation & Guideline while working in the laboratory. These guidelines are meant to provide safe working environment for the safety of equipments and building in the laboratory as well as to avoid accident.

The faculty has detailed out the regulations for working in laboratories as the working procedures is the fundamental aspect of laboratory activities. Students are required to follow these guidelines while they are in the laboratory or within the vicinity of the laboratory. The objectives of these guidelines are as follows:-

a. To create a secure, safe and conducive working environment during laboratory and practical works.
b. To guarantee the safety of the students and their environment.
c. To highly cultivate discipline culture among students.
d. To adapt professional working ethics.
e. To prolong the equipments' life span and to maintain it with proper use and procedures.
f. To prevent misuse of equipments and avoid inappropriate and unnecessary damage to the equipments.
g. To make sure the practical work session is efficient without undue interference.

The working ethics are divided into three (3) categories, namely General Work Ethics, Laboratory Work Ethics and Dress Code in the Laboratory.

7.4.1 General Work Ethics

General work ethics is inevitably important. As student and future mechanical engineer are the people who will shape the national future engineering environment, general work ethics should be emphasised no matter where they are. To uphold these basic guidelines, the following instructions are enforced:

a. No entrance into the laboratory or work with the equipments without permission of laboratory manager or authorised staff.
b. Equipments should not be taken out of the laboratory without prior permission from laboratory manager or authorised staff.
c. No food or drinks are allowed in the laboratory or workshops.
d. Non-related items are not allowed in the laboratory, such as bags and helmets.
e. Unacceptable behaviour or act will not be tolerated.
f. Obey the instructions given by the laboratory manager or authorised staff.
g. Adhere and understand the procedures in the laboratory such as laboratory submission procedures, equipment on loan procedures and the procedure of working during non-office hours.
h. Report any accident to the the laboratory manager or authorised staff immediately.
i. Keep the laboratory clean and safe after every laboratory session.
j. Place any laboratory leftover or waste materials in the respective bin.

7.4.2 Operational Work Ethics

The Laboratory Operational Work Ethics is one of the guidelines that all mechanical engineering students should adhere to during their laboratory session. This guideline is specifically focused in handling practical works in the laboratory. Among the aspects to be observed by the students are as follows:-

a. During laboratory session, students should always be supervised by at least either a laboratory instructor or a technical staff.
b. Students should obtain a copy of laboratory sheet that could be downloaded from faculty website before starting a practical works.
c. Students should understand the working procedures of equipment before commencing laboratorial activities by referring to the work manual or instruction given by the lecturer or technical staff.
d. Students should sign attendance list distributed by the technical staff in charge.
e. Students should use and optimise the time allocated to finish off their practical works including recording observations and conclusions.
f. All laboratory reports should be submitted on time. Informal report should be handed in three (3) working days after the laboratory session took place. For formal

report, it should be submitted seven (7) working days after the date of the laboratory session.

g. Laboratory reports should be submitted to the lecturer that in charge during the laboratory session.
h. For any defects found on the equipments, kindly report to the lecturer or technical staff in charge.
i. Equipments/tools must be returned to their designated location.

7.4.3 Dress Code

Dressing reflects the culture of the working environment. Irrespective of type of working environment, one must dress appropriately. The university has distributed a general guideline to the students on dress code within the university area. As far as the faculty is concerned, the dress code applies specifically for workshops or laboratories. The detail of the dress code can be referred to the Pejabat Hal Ehwal Pelajar dan Alumni. The following instruction must be carefully observed by the students while they are around or working in the laboratory.

a. Students should always display matrix cards for ease of identification.
b. Students should always wear appropriate dress corresponding to the activities undertaken.
c. Students should always wear proper personal protective equipment such as goggles, hand gloves or aprons while handling high risk equipments.
d. Students must wear covered shoes inside the laboratory. Any uncovered shoes are not allowed at all times.
e. For all activities inside the workshop, student must wear safety shoes.
f. Students are encouraged to wear workshop coat at the laboratory compound. Any collarless or round neck T-shirt is not allowed.
g. Female student with scarf should tie it at the back of her neck or tug it in her workshop coat. Loose clothing could increase possibility of accident.
h. Students are not allowed to wear any jewellery such as necklace or bracelet that will affect their safety.
i. Male students should keep their hair short. Female students with long hair should tie up their hair at the back of their head.

j. Students should always be neat and tidy.

7.5 Implementation of Laboratory Work

The purpose of laboratory work is to increase student's understanding on the course taught. Several laboratories were developed to cater the demand for the courses. In general, the conduct of the laboratory is parallel to the course registered on that particular semester.

Each laboratory subject is conducted in a period of 14 weeks which consists of 4 laboratory sessions. During the first week before the laboratory session started, student will be briefed on the content and how the laboratory will be conducted. Some of the content during the orientation (1 week) period are as follows:

a. Name of laboratory station and how the experimental work will be conducted.
b. Number and name of experimental work to be carried out.
c. Brief explanation of the laboratories work.
d. Group formation.
e. Format of report writing and marking scheme.

Each laboratory session is conducted in 3 weeks consist of activities as follows:

a. Briefing on specific experiment explained by the lecturer/the instructor
b. Students conduct the specific experiment
c. Laboratory report preparation and submission.

There are two approaches of laboratory work which are prescriptive laboratory work and open-ended laboratory work. For prescriptive laboratory activities, the students are provided with complete laboratory sheet and are fully guided by the lecturer or the instructor during the laboratory session. Prescriptive laboratory work will be conducted for diploma laboratory courses. Meanwhile, bachelor laboratory courses will implement open-ended approach. In this approach, the students will be given a very minimum guidance from the lecturer or instructor. The laboratory sheet is given for the open-ended laboratory with minimum guideline. Open ended laboratory work allows the opportunity for students to be creative about the execution, analysis and evaluation of laboratory work. Students create,

for example, the evidence, the analysis, and the evaluation of laboratory work. Often synthesis is also involved in open-ended work. These processes involve interaction while in the laboratory (in-lab work) and after leaving the laboratory (post-lab work).The students are fully responsible to conduct and handle the experiment themselves after short briefing given by the lecturer or the instructor. The students work in a group of 4 to 5 persons. They need to determine the objectives, apparatus and methods as well as how to execute the experiment. A report including results, discussion, conclusion and references is submitted for evaluation.

8 LIST OF STAFF

8.1 Department of Mechanical Engineering (Broad-Based)

8.1.1 Field of Thermal Engineering

IR. DR. SUHAIMI BIN MISHA
Coordinator (Mechanical Engineering – Part Time) / Senior Lecturer
P.Eng, MIEM
Ph.D. Renewable Energy (UKM)
M.Eng. Mechanical Engineering (UTM)
B.Eng. (Hons) Mech (UKM)
: suhaimimisha@utem.edu.my
: 06-2704334
: 8/5/80

DR. YUSMADY BIN MOHAMED ARIFIN
Senior Lecturer
Ph.D. Production Engineering (Gunma University, Japan)
M.Sc. Thermal Power & Fluids Engineering (UMIST, UK)
B.Eng. (Hons) Mechanical & Material Engineering (UKM)
: yusmady@utem.edu.my
: 06-2704469
: 8/5/62

IR. TS. DR. MOHD. ZAID BIN AKOP
Senior Lecturer
P.Eng, MIEM
Ph.D. Mechanical System Engineering (Gunma University, Japan)
M.Sc. Manufacturing System Engineering (Coventry, UK)
B.Eng. Mechanical Engineering (UKM)
: zaid@utem.edu.my
: 06-2704400
: 8/5/66

DR. FATIMAH AL-ZAHRAH BINTI MOHD SA'AT
Senior Lecturer
Ph.D. Mechanical Engineering (Leicester, UK)
M.Eng. Mechanical Engineering (UTM)
B.Eng. Mechanical Engineering (KUiTTHO)
: fatimah@utem.edu.my
: 06-2704391
: 8/5/52

DR. MOHD HAFIDZAL BIN MOHD HANAFI
Senior Lecturer
Ph.D. Internal Combustion (Tohoku University, Japan)
M.Eng. Mechanical Engineering (UKM)
B.Eng. Mechanical Engineering (Heat Transfer) (Fukui University, Japan)
hafidzal@utem.edu.my
: 06-2704431
: 8/6/9

DR. NUR IZYAN BINTI ZULKAFLI
Senior Lecturer
Ph.D. Energy and Power (Cranfield, UK)
M.Sc. Chemical Engineering (UTP)
B.Eng. (Hons) Chemical Engineering (UTP)
nurizyan@utem.edu.my
: 06-2704438
: 8/6/30

IR. DR. ABDUL RAFEQ BIN SALEMAN
Senior Lecturer
P.Eng, MIEM
Ph.D. Engineering in Nanomechanics (Tohoku University, Japan)
M.Eng. (Mechanical Engineering) (UM)
B. Eng. (Hons) Mechanical Engineering (UKM)
rafeq@utem.edu.my
: 06-2704419
: 8/6/88

Senior Lecturer
Ph.D. Mechanical Engineering (Liverpool, UK)
M.Eng. Mechanical Engineering (Superplasticity in Metals) (UM)
B.Eng. (Hons) Mechanical (UM)
: rafidahhasan@utem.edu.my
: 06-2704389
: 8/6/67

DR. MUHAMMAD ZULFATTAH BIN ZAKARIA
Senior Lecturer
Ph.D. Mechanical Engineering (UM)
M.Sc. in Energy Systems (University of Applied Sciences Aachen, Germany)
Diplom-Ingenieur (FH) (University of Applied Sciences Wiesbaden, Germany)
: zulfattah@utem.edu.my
: 06-2704437
: 8/6/45

8.1.4 Field of Material Engineering

ASSOCIATE PROFESSOR DR. MOHD ZULKEFLI BIN SELAMAT
Associate Professor
Ph.D. Mechanical & Material Engineering (UKM)
M.Sc. Materials Engineering (USM)
B.Eng. (Hons) Materials Engineering (USM)
Dip. Mechanical Engineering (UTM)
: zulkeflis@utem.edu.my
: 06-2704353
: 8/5/5

PROFESSOR IR. DR. GHAZALI BIN OMAR
Deputy Vice Chancellor, Research & Innovation / Professor
P.Eng, MIEM
Ph.D. Solid State Physics (UM)
M.Tech. Material Science (UM)
B. Mechanical Engineering (Melb)
: ghazali@utem.edu.my
: 06-2701330
: 8/3/10

DR. NOR AZMMI BIN MASRIPAN
Senior Lecturer
D. Eng. Mechanical Science and Engineering (Nagoya University, Japan)M.Eng Mechanical Engineering (UTM)
B.Eng. (Hons) Mechanical Engineering (Fachhochschule Aalen, Germany)
Diploma Mechanical Engineering (UTM)
: norazmmi@utem.edu.my
: 06-2704370
: 8/6/56

DR. SITI HAJAR BINTI SHEIKH MD. FADZULLAH
Senior Lecturer
Ph.D. Mechanical Enginering (University of Liverpool,UK)
M.Sc. Composite Materials (Imperial College, University of London, UK)
B.Eng. (Hons) Materials Engineering (USM)
: hajar@utem.edu.my
: 06-2704386
: 8/5/29

DR. WAN MOHD FARID BIN WAN MOHAMAD
Senior Lecturer
Ph.D. Mechanical Engineering (UTeM)
M.Sc. Materials Engineering (USM)
B.Eng. Materials Engineering (USM)
: farid@utem.edu.my
: 06-2704471
: 8/6/18

DR. NURFAIZEY BIN ABDUL HAMID
Senior Lecturer
Ph.D. Mechanical Engineering (University of Canterbury, NZ)
M.Sc. Manufacturing System Engineering (Coventry, UK)
B.Eng. Mechanical & Materials Engineering (UKM)
: nurfaizey@utem.edu.my
: 06-2704475
: 8/6/7

DR. MOHD NUR AZMI BIN NORDIN
Senior Lecturer
Ph.D. Mechanical Engineering (Yamaguchi University)
M.Eng. Mechanical Engineering (Yamaguchi University, Japan)
B.Eng. Mechanical Engineering (Yamaguchi University, Japan)
: mnazmi@utem.edu.my
: 06-2704413
: 8/6/89

MRS. ANITA AKMAR BINTI KAMAROLZAMAN
Lecturer
M.Sc. (Materials Engineering) (USM)
B.Eng. (Hons) Materials Engineering (USM)
: anita@utem.edu.my
: 06-2704372
: 8/5/42

8.1.5 Field of Design Engineering

DR. FAIZ REDZA BIN RAMLI
Head of Department (Mechanical Engineering)/ Senior Lecturer
Ph.D. Optimization Engineering (Kanazawa University, Japan)
M.Sc. (Eng.) Product Design and Management (Liverpool, UK)
B.Eng. (Hons) (Mechanical Engineering) (UKM)
: faiz@utem.edu.my
: 06-2704375
: 8/6/53

DR. SHAFIZAL BIN MAT
Senior Lecturer
Ph.D in Mechanical and Manufacturing Engineering (Loughborough, UK)
M.Sc. Manufacturing Systems Engineering (Coventry, UK)
B.Eng. (Hons) Mechanical Engineering (UiTM)
shafizal@utem.edu.my
: 06-2704425
: 8/5/70

ASSOCIATE PROFESSOR IR. DR. MOHD RIZAL BIN ALKAHARI
Associate Professor
P.Eng, MIEM
Ph.D. Mechanical and Manufacturing Engineering (Kanazawa, Japan)
M.Sc. (Distinction) Manufacturing System Engineering (Warwick, UK)
B.Eng. (Hons) Manufacturing Engineering (IIUM)
: rizalalkahari@utem.edu.my
: 06-2702823
: 8/6/83

IR. DR. SITI NURHAIDA BINTI KHALIL
Senior Lecturer
P.Eng, MIEM
Ph.D. Manufacturing System (Loughborough, UK)
M.Sc. Engineering Design (Loughborough, UK)
B.Eng. (Hons) Mechanical Engineering (UNITEN)
: snurhaida@utem.edu.my
: 06-2704388
: 8/5/56

DR. ABD. RAHMAN BIN DULLAH
Senior Lecturer
PhD. Mechanical Engineering (University of Liverpool, UK)
M.Sc. Engineering Design (Loughborough University, UK)
B.Eng. (Hons) Mechanical (USM)
: abdrahman@utem.edu.my
: 06-2704364
: 8/5/10

IR. DR. MOHD SHUKRI BIN YOB
Senior Lecturer
P.Eng, MIEM
Ph.D. Mechanical Engineering (UTM)
M. Eng. Mechanical Engineering (UKM)
B.Eng. Mechanical Engineering (UTM)
: mshukriy@utem.edu.my
: 06-2704445
: 8/6/33

IR. DR. MOHD ASRI BIN YUSUFF
Senior Lecturer
P.Eng, MIEM
Ph.D. Mechanical & Material Engineering (UKM)
M.Eng. Manufacturing System (UKM)
B.Eng. Mechanical Engineering (UTM)
: mohd.asri@utem.edu.my
: 06-2704414
: 8/6/79

DR. SHAMSUL ANUAR BIN SHAMSUDIN
Senior Lecturer
Ph.D. Engineering (University of Dayton, USA)
M.Eng. (Mechanical) (UTM)
B.Sc. Mechanical Engineering (Valparaiso University, USA)
shamanuar@utem.edu.my
: 06-2704355
: 8/6/52

DR. MOHD NIZAM BIN SUDIN
Senior Lecturer
Ph.D. Design Research (DTU, Denmark)
M.Sc. (Mechanical) (UPM)
B.Eng. (Mechanical) (UKM)
: nizamsudin@utem.edu.my
: 06-2704393
: 8/6/28

8.1.6 Field of Computer-Aided Design (CAD)

DR. MASJURI BIN MUSA @ OTHMAN
Lecturer
PhD. Mechanical Engineering (UTeM)
M.Sc. Innovation and Engineering Design (UPM)
B.Eng. (Hons) Mechanical Engineering (USM)
masjuri@utem.edu.my
: 06-2704360
: 8/6/2

MDM. AFIQAH BINTI HAMZAH
Lecturer
M. Eng (Mechanical) (UTM)
B.Eng. (Hons) Mechanical (University of Sydney, Australia)
afiqah@utem.edu.my
: 06-2704435
: 8/5/57

DR. NIDZAMUDDIN BIN MD YUSOF
Senior Lecturer
PhD Human Factors in Autonomous Vehicle (Eindhoven University of Technology, The Netherlands)
MSc. Innovation and Engineering Design (UPM)
B.Eng. (Mechatronics Design) (Fachhochschule Gelsenkirchen, Germany)
nidzamuddin@utem.edu.my
: 06-2704425
: 8/5/102

DR. JUFFRIZAL BIN KARJANTO
Coordinator (Mechanical Engineering) / Senior Lecturer
PhD Human Factors in Autonomous Vehicle (Eindhoven University of Technology, The Netherlands)
MSc. Innovation and Engineering Design (UPM)
B.Sc. Mechanical Engineering (Ohio State University, USA)
juffrizal@utem.edu.my
: 06-2704423
: 8/5/22

MR. AIMAN BIN ROSLIZAR
Lecturer
M.Sc. Energy Technology (UKM)
B.Eng. (Mechanical and Manufacturing) (University of Melbourne, Australia)
aiman@utem.edu.my
: 06-2704434
: 8/6/5

8.1.7 Field of Automotive Engineering

PROFESSOR TS. DR. NOREFFENDY BIN TAMALDIN
Professor
Ph.D. Automotive Engineering (Coventry, UK)
M.Eng. Mechanical Engineering (Hartford, CT, USA)
B.S.M.E. (Hartford, CT, USA)
: noreffendy@utem.edu.my
: 06-2704369
: 8/3/11

ASSOCIATE PROFESSOR IR. DR. MOHD AZMAN BIN ABDULLAH
Associate Professor
P.Eng, MIEM
Dr.Eng. Mechanical Control Systems (Tokyo University of Agriculture and Technology, Japan)
M.Sc. Automotive and Motorsport Engineering (Brunel, UK)
B.Sc. (Hons) Mechanical Engineering (UNITEN)
: mohdazman@utem.edu.my
: 06-2704378
: 8/3/7

ASSOCIATE PROFESSOR DR. MOHD FADZLI BIN ABDOLLAH
Deputy Dean (Academic) / Associate Professor
D. Eng. Mechanical Science and Engineering (Nagoya University, Japan)
M.Eng. Mechanical Engineering (UKM)
B.Eng. (Hons) Mechanical Engineering (UKM)
: mohdfadzli@utem.edu.my
: 06-2704335
: 8/6/99

ASSOCIATE PROFESSOR DR. MUSTHAFAH BIN MOHD TAHIR
Associate Professor
Ph.D. (Energy and Environment Science) (Nagaoka University of Technology, Japan)
M.Sc. Engineering (Mechanical Design & Production Engineering Program) (Nagaoka University of Technology, Japan)
B.Eng. Mechanical Engineering (University of Electro-Communication, Japan)
: musthafah@utem.edu.my
: 06-2704493
: 8/5/16

DR. FAIZUL AKMAR BIN ABDUL KADIR
Coordinator (Automotive Engineering) / Senior Lecturer
M.Sc. Automotive Engineering (Coventry, UK)
B.Eng. Mechanical & Automotive Engineering (UTM)
: faizul@utem.edu.my
: 06-2704385
: 8/6/82

IR. DR. FUDHAIL BIN ABDUL MUNIR
Senior Lecturer
P.Eng, MIEM
D.Eng (Yamaguchi University, Japan)
M.Eng. Mechanical Engineering (UTM)
B.Eng. Mechanical Engineering (Automotive) (UIA)
: fudhail@utem.edu.my
: 06-2704409
: 8/6/98

DR. MUHD RIDZUAN BIN MANSOR
Coordinator (Postgraduate Studies) / Senior Lecturer
Ph.D. Mechanical Engineering (UPM)
M.Sc. Manufacturing System Engineering (Coventry, UK)
B.Sc. Mechanical Engineering (UTM)
: muhd.ridzuan@utem.edu.my
: 06-2704398
: 8/5/100

DR. MOHD RODY BIN MOHAMAD ZIN
Research Coordinator / Senior Lecturer
Dr. Eng. Mechanical Science and Engineering (Nagoya University, Japan)
M.Eng. Mechanical Engineering (UTM)
B.Eng. (Hons) Mechanical Engineering (Thermal-Fluids) (KUTKM)
rody@utem.edu.my
: 06-2704406
: 8/6/97

DR. MOHD ADRINATA BIN SHAHARUZAMAN
Lab Coordinator / Senior Lecturer
Ph.D. Mechanical Engineering (UPM)
M.Eng. Mechanical Engineering (UTM)
B.Eng. Mechanical Engineering (Automotive) (UTM)
: adrinata@utem.edu.my
: 06-2704411
: 8/6/96

MR. ADZNI BIN MD. SAAD
Lecturer
M.Eng. Automotive Engineering (Michigan, USA)
B.Eng. Mechanical & Automotive Engineering (UTM)
: adzni@utem.edu.my
: 06-2704399
: 8/6/54

DR. AHMAD KAMAL BIN MAT YAMIN
Senior Lecturer
Ph.D. Mechanical & Automotive Engineering (Coventry, UK)
M.Sc. Automotive Engineering (Coventry, UK)
B.Eng. Mechanical & Automotive Engineering (UTM)
: ahmadkamal@utem.edu.my
: 06-2704383
: 8/6/91

DR. ADNAN BIN ROSELI
Senior Lecturer
Ph.D. Internal Combustion Engine (UM)
M.Sc. Industrial Engineering (UTM)
B.Eng. Mechanical-Aeronautical (UTM)
: adnanrosli@utem.edu.my
: 06-2704442
: 8/6/11

MR. HILMI BIN AMIRUDDIN
Senior Lecturer
M.Sc. Automotive Engineering (Coventry, UK)
B.Eng. Mechanical & Automotive Engineering (UTM)
: hilmi@utem.edu.my
: 06-2704385
: 8/6/82

8.1.8 Field of Maintenance Engineering

DR. RUZTAMREEN BIN JENAL
Dean / Senior Lecturer
Ph.D. (Structural Health Monitoring) (Sheffield,UK)
M.Sc. (Maintenance Engineering) (Manchester, UK)
B.Sc. Mechanical Engineering & Sciences (Japan)
: ruztamreen@utem.edu.my
: 06-2704337/06-2704340
: 8/5/95

DR. REDUAN BIN MAT DAN
Senior Lecturer
Ph.D. Mechanical Engineering (The University of Manchester, UK),
M.Sc. Maintenance Eng & Asset Mnagement (The University of Manchester, UK)
B.Sc. (Hons) Petroleum Engineering (The New Mexico Inst. of Mining & Tech.)
: reduan.dan@utem.edu.my
: 06-2704407
: 8/5/14

PROFESSOR IR. DR. MOHD JAILANI BIN MOHD NOR
Director in Bursary Office / Professor
Ph.D. (Sheffield Hallam University, UK)
M.Sc. Mechanical Engineering (Oklahoma State University, USA)
Cert. of Education (Technical Teaching College, Kuala Lumpur)
B.Sc. Mechanical Engineering (Oklahoma State University, USA)
jai@utem.edu.my
: 06-2701568
: 8/3/19

ASSOCIATE PROFESSOR IR. DR. ROSZAIDI BIN RAMLAN
Associate Professor
P.Eng, MIEM
Ph.D. (Sound & Vibration) (University of Southampton, UK)
M.Sc. (Adv. Control & Systems Engineering) (UMIST, UK)
B.Eng. (Hons) Mechanical Engineering (UMIST, UK)
: roszaidi@utem.edu.my
: 06-2704367
: 8/5/12

ASSOCIATE PROFESSOR DR. TS. AZMA PUTRA
Associate Professor
Ph.D. Sound & Vibration (Southampton, UK)
M.Sc. Sound & Vibration (Southampton, UK)
B.Sc. Engineering Physics (ITB, Bandung)
: azma.putra@utem.edu.my
: 06-2701329
: 8/6/3

DR. RAINAH BINTI ISMAIL
Senior Lecturer
Ph.D. Mechanical Engineering (Glasgow, UK)
M.Eng. Mechanical Engineering (UTM)
B.Eng. (Hons) Mechanical (UPM)
: rainah@utem.edu.my
: 06-2704368
: 8/5/86

DR. NURUL HILWA BINTI MOHD ZINI
Senior Lecturer
Ph.D. Mechanical (Tribology) (University Of Twente, The Netherlands)
M.Eng. (Mechanical Engineering) (UKM)
B.Eng. Mechanical Engineering(UTM)
nurulhilwa@utem.edu.my
: 06-2704421
: 8/6/69

DR. TS. ASRIANA BINTI IBRAHIM
Senior Lecturer
D. Eng. Mechanical Engineering (Ehime University, Japan)
M.Eng. Mechanical Engineering (UKM)
B.Eng. Mechanical Industrial (UTM)
asriana@utem.edu.my
: 06-2704422
: 8/5/48

DR. ZAKIAH BINTI ABD. HALIM
Senior Lecturer
Ph.D. Mechanical & Material Engineering (UKM)
M.Sc. Mechanical Engineering (UNSW, Australia)
B.Eng. (Hons) Mechanical Engineering (UTP)
zakiahh@utem.edu.my
: 06-2704381
: 8/6/68

MR. MOHAMED HAFIZ BIN MD ISA
Lecturer
M.Sc. Environmental Studies (Nagoya University, Japan)
B.Eng. (Hons) Chemical Engineering (UTM)
: mohamedhafiz@utem.edu.my
: 06-2704498
: 8/6/57

MRS. NURUL HANIM BINTI RAZAK
Lecturer
M.Eng. Chemical Engineering (UTM)
B.Eng. Chemical Engineering (UTM)
nurulhanim@utem.edu.my
: 06-2704441
: 8/6/39

8.1.9 Field of Control Engineering

DR. NOR SALIM BIN MUHAMMAD
Senior Lecturer
Ph.D. (Mechanical) (Nagoya Institute of Technology, Japan)
M.Sc. Engineering (Nagaoka Uni. of Tech., Japan)
B.Tech. Mechanical Engineering (Nagaoka Uni. of Tech., Japan)
Dip. Electronics Engineering & Information Technology
: norsalim@utem.edu.my
: 06-2704374
: 8/6/27

ASSOCIATE PROFESSOR IR. DR. MD FAHMI BIN ABD SAMAD @ MAHMOOD
Associate Professor
Ph.D. Mechanical Engineering (UTM)
M.Eng. (Engineering Mgt) (UTM)
B.Eng. Mechanical Engineering (UTM)
: mdfahmi@utem.edu.my
: 06-2704357
: 8/5/61

IR. DR. MOHD AZLI BIN SALIM
Senior Lecturer
P.Eng, MIEM
PhD. Mechanical Engineering (UTeM)
M.Eng. Mechanical Engineering (UTM)
B.Eng. (Hons) Mechanical Engineering (Structure-Materials) (KUTKM)
: azli@utem.edu.my
: 06-2704408
: 8/5/65

DR. AMRIK SINGH A/L PHUMAN SINGH
Lecturer
Ph.D. Informatics (Systems Science) (Kyoto University, Japan)
M.Eng. Mechanical Engineering (UTM)
B.Eng. (Hons) Mechanical Engineering (Automotive) (UTeM)
amriksingh@utem.edu.my
: 06-2704426
: 8/6/80

MR. ZAIRULAZHA BIN ZAINAL
Lecturer
M.Eng. (Electric-Mechatronic & Automatic Control) (UTM)
B.Eng. Mechanical Intelligent Engineering (Kyushu Institute of Tech., Japan)
: zairulazha@utem.edu.my
: 06-2704363
: 8/6/51

DR. TS. FAUZI BIN AHMAD
Senior Lecturer
Ph.D. Mechanical Engineering (UTM)
M.Sc. Mechanical Engineering (UTeM)
B.Eng. (Hons) Mechanical Engineering (Automotive) (UTeM)
fauzi.ahmad@utem.edu.my
: 06-2704428
: 8/5/37

8.2 Department of Diploma Studies

8.2.1 Field of Maintenance Engineering

DR. NURHIDAYAH BINTI ISMAIL
Head of Department/ Senior Lecturer
Ph.D. Mechanical (Tribology) (University Of Twente, The Netherlands)
M.Eng. (Mechanical Engineering) (UKM)
B.Eng. Manufacturing Engineering (UMP)
nurhidayah.ismail@utem.edu.my
: 06-2704424
: 8/6/71

8.2.2 Field of Structure Engineering

DR. MIZAH BINTI RAMLI
Senior Lecturer
D. Eng. in Mechano-Micro Engineering (Tokyo Institute of Technology, Japan)
M. Eng. in Mechanical Systems Engineering (Takushoku University, Japan)
B. Eng. Mechanical Systems Engineering (Takushoku University, Japan)
: mizah@utem.edu.my
: 06-2704443
: 8/6/38

DR. KAMARUL ARIFFIN BIN ZAKARIA
Senior Lecturer
Ph.D. Mechanical & Material Engineering (UKM)
M.Eng. Mechanical Engineering (UTM)
B.Eng. (Hons) Mechanical Engineering (UTM)
: kamarul@utem.edu.my
: 06-2704373
: 8/6/10

8.2.3 Field of Fluid Engineering

MR. SHAMSUL BAHARI BIN AZRAAI
Senior Lecturer
M.Sc. Mechanical Engineering (USM)
B.Eng. (Mechanical & System) (UPM)
: shamsulbahari@utem.edu.my
: 06-2704397
: 8/5/85

8.2.4 Field of Thermal Engineering

DR. FADHLI BIN SYAHRIAL
Senior Lecturer
D. Eng. Mechanical Engineering (Ehime University, Japan)
M.Eng. (Mechanical Engineering) (UKM)
B.Eng. (Mechanical Engineering) (Ehime University, Japan)
fadhlisyahrial@utem.edu.my
: 06-2704415
: 8/6/85

8.2.5 Field of Computer-Aided Design (CAD)

MR. WAN MOHD ZAILIMI BIN WAN ABDULLAH @ ZAKARIA
Senior Lecturer
M.Sc. Automotive Engineering (Coventry, UK)
B.Sc. Mechanical Engineering (Aeronautics) (UTM)
Dip. Mechanical Engineering (Aeronautics) (UTM)
: zailimi@utem.edu.my
: 06-2704354
: 8/6/13

MR. MOHD NAZIM BIN ABDUL RAHMAN
Lecturer
M.Sc. Innovation and Engineering Design (UPM)
B.Eng. (Hons) Mechanical Engineering (UTM)
: nazim@utem.edu.my
: 06-2704359
: 8/5/28

8.2.6 Field of Control Engineering

DR. MOHD HANIF BIN HARUN
Lecturer
Ph.D. Mechanical Engineering (UTM)
M.Sc. Automotive Engineering (Coventry, UK)
B.Eng. (Hons) Mechanical Engineering (Thermal-Fluids) (KUTKM)
: hanif@utem.edu.my
: 06-2704405
: 8/6/90

8.2.7 *Field of Mathematics And Science*

DR. SUHAILA BINTI SALLEH
Senior Lecturer
Ph.D. Corrosion Science & Engineering (University of Manchester, UK)
M.Sc. Mathematics (UKM)
B.Sc (Hons) Mathematics (University of Wales College, Cardiff, UK)
: suhaila@utem.edu.my
: 06-2704474
: 8/5/40

DR. NORTAZI BINTI SANUSI
Senior Lecturer
PhD Renewable Energy (UKM)
M. Applied Statistics (UM)
B.Sc. (Hons) (Mathematics) (USM)
: nortazi@utem.edu.my
: 06-2704382
: 8/5/58

MRS. NORASRA BINTI A. RAHMAN
Senior Lecturer
M.Eng. (Chemical Engineering) (UKM)
B.Eng. (Hons) (Chemical Engineering) (UKM)
: norasra@utem.edu.my
: 06-2704387
: 8/6/40

DR. NOR MAZLIN BINTI ZAHARI
Lecturer
Ph.D. in Engineering Fluid Mechanics, (Durham University, UK)
M.Sc. (Pure Mathematics) (UPM)
B.Sc. (Hons) Mathematics (UPM)
normazlin@utem.edu.my
: 06-2704440
: 8/6/32

DR. NORYANI BINTI MUHAMMAD
Ph.D. Material Selection of Natural Fibre Composites (UPM)
M.Sc. (Engineering Mathematic) (UTM)
B. Sc. (Hons) Statistics (UiTM)
Diploma (Statistics) (UiTM)
: noryani@utem.edu.my
: 06-2704439
: 8/6/31

MR. IMRAN SYAKIR BIN MOHAMAD
Lecturer
M.Sc. Chemistry (UTM)
B.Sc. Industrial Chemistry (UTM)
: imran@utem.edu.my
: 06-2704472
: 8/5/9

SITI NOR HABIBAH BINTI HASSAN
Lecturer
M.Sc. Quantitative Science (Operation Management) (UiTM)
B.Sc. Mathematical Science (Mathematics & Statistics) (UIAM)
norhabibah@utem.edu.my
: 06-2704433
: 8/5/44

8.3 Administrative Staff

MRS. NORMA HAYATI BINTI HASHIM
Senior Assistant Registrar
: normahayati@utem.edu.my
: 06-2704343
: 8/3/54

MRS. ZAIHASRAH BINTI ALIAS
Assistant Registrar
B.Sc. (Human Development) (UPM)
: zaihasrah@utem.edu.my
: 06-2704344
: 8/3/56

MR. AZMI BIN OTHMAN
Senior Assistant Administrative Officer
: azmi@utem.edu.my
: 06-2704347
: 8/3/M1

MASTURA BINTI KAMARUL ARIFIN
Assistant Administrative Officer
: mastura.kamarularifin@utem.edu.my
: 06-2702076
: 8/3/M1

MR. NOORHASYUDDIN BIN MOHD BASRI
Senior Administrative Assistant
: norhasyuddin@utem.edu.my
: 06-2704346
: 8/3/M1

MRS. RAHFESTA BINTI ABD RAHMAN
Senior Administrative Assistant
: rahfesta@utem.edu.my
: 06-2704348
: 8/3/M1

MRS. MONIRAH BINTI MIHAT
Senior Administrative Assistant
: monirah@utem.edu.my
: 06-2701841
: 8/3/M1

MRS. SYALWANIE BINTI MOHAMAD ROZI
Office Secretary
Dip. in Science Secretary (Politeknik Tuanku Syed Sirajuddin)
: syalwanie@utem.edu.my
: 06-2704338/06-2704341
: 8/3/32

MR. ASRULHAFIZ BIN DZULKIFLI
Administrative Assistant
: asrulhafiz@utem.edu.my
: 06-2704349
: 8/3/M1

MRS. NOOR ASWANY BINTI SES
Office Secretary
: aswany@utem.edu.my
: 06-2704339
: 8/3/M1

MR. AMIR HAFIZUDDIN BIN A. BAKAR
General Office Assistant
: amirh@utem.edu.my
: 06-2704350
: 8/3/M1

8.4 Laboratory Technical Staff

MR. RASHDAN BIN SEMAN
Senior Assistant Engineer
Dip. Kej. Mekanikal (Politeknik Shah Alam)
Sijil Kej. Mekanikal (Politeknik Port Dickson)
: rashdan@utem.edu.my
: 06-2704446
: Mech. Lab. Comp. TTU

MR. ASJUFRI BIN MUHAJIR
Assistant Engineer
Dip. Kej. Mekanikal (Politeknik Port Dickson)
Sijil Drebar Enjin Gred II (Enjin Stim & Dandang Stim)
: asjufri@utem.edu.my
: 06-2704447
: Mech. Lab. Comp. TTU

MR. HAIRUL NEZAM BIN WAHID
Assistant Engineer
Dip. Kej. Mekanikal (Politeknik Merlimau)
Sijil Kej. Mekanikal (Jentera Am) (Politeknik Kota Melaka)
: hairul.nezam@utem.edu.my
: 233 2535
: Mech. Lab. Comp. TTU

MR. JOHARDI BIN ABD. JABAR
Assistant Engineer
Dip. Kej. Mekanikal (Politeknik Port Dickson)
: johardi@utem.edu.my
: 06-2704449
: Lab. Comp. of Tech. Campus

MR. HAIRUL NIZAM BIN DAUD
Senior Assistant Engineer
Dip. Kej. Mekanikal (Politeknik Ungku Omar)
: hairul@utem.edu.my
: 06-2704450
: Mech. Lab. Comp. TTU

MR. MOHD HAIRI BIN MD. RAHIM
Assistant Engineer
Dip. Mekanikal Am (Politeknik Ungku Omar)
: hairi@utem.edu.my
: 06-2704454
: Mech. Lab. Comp. TTU

MR. MOHD. RIZAL BIN ROOSLI
Senior Assistant Engineer
Dip. Kej. Mekanikal (Politeknik Shah Alam), Sijil Kej. Mekanikal (Politeknik Ungku Omar)
: mohdrizal@utem.edu.my
: 06-2704448
