

SPRINKLER ACTIVATION ACCORDING TO THE TEMPERATURE
USING ARDUINO

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

BORANG PENGESAHAN STATUS TESIS

JUDUL: SPRINKLER ACTIVATION ACCORDING TO THE TEMPERATURE
USING ARDUINO

SESI PENGAJIAN: 2016/2017

Saya SERI MURNI BINTI ABDUL RAHMAN mengaku membenarkan tesis (PSM/Sarjana/
Doktor Falsafah) ini disimpan di Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi
dengan syarat-syarat kegunaan seperti berikut:

1. Tesis dan projek adalah hak milik Universiti Teknikal Malaysia Melaka.
2. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan untuk tujuan pengajian sahaja.
3. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan tesis ini sebagai bahan pertukaran antara institusi pengajian tinggi.
4. ** Sila tandakan (/)

SULIT

(Mengandungi maklumat yang berdarjah keselamatan atau kepentingan Malaysia seperti yang termaktub di dalam AKTA RAHSIA RASMI 1972)

TERHAD

(Mengandungi maklumat TERHAD yang telah ditentukan oleh organisasi/ badan di mana penyelidikan dijalankan)

TIDAK TERHAD

(TANDATANGAN PENULIS)

Alamat tetap: NO.6, LORONG
PELANGKAH 8, TAMAN
PELANGKAH,
26600, PEKAN,
PAHANG.

Tarikh: 22/08/2017

(TANDATANGAN PENYELIA)

Nama Penyelia:
PROF MADYA DR. NOR
AZMAN B. ABU

Tarikh: 22/08/2017

CATATAN: * Tesis dimaksudkan sebagai Laporan Akhir Projek Sarjana Muda (PSM)
** Jika tesis ini SULIT atau TERHAD, sila lampirkan surat daripada pihak berkuasa.

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

I hereby declare that I have read this project report and found
 this project report is sufficient in term of the scope and quality for the award of
 Bachelor of Computer Science (Computer Networking) With Honours.

SUPERVISOR

(PROF MADYA DR. NOR AZMAN B.
 ABU)

Date: 22/8/2017

DECICATION

Special to my beloved parents and family

ACKNOWLEDGEMENTS

Alhamdulillah, praise be to Allah SWT for his blessing and permission as finally I was able to finish my project within the specified duration. I would like to take this opportunity to thank to my beloved family for giving me the greatest support all the time until my whole project was completed.

Besides that, I would like to express my appreciation to my supervisor, Dr Nor Azman Bin Abu, from Faculty of Information and Communication Technology, Universiti Teknikal Malaysia Melaka (UTeM), for his support and guidance to me during the period of my studies. From his several of useful ideas and comments regarding the project help me in performing this project properly.

Finally, thanks also to other lecturers, friend and my coursemates for their encouragement which help me in completion of this project.

ABSTRACT

Nowadays, technology is growing rapidly which is able to easy for a person to handle the work more organized and save time. Therefore, a sprinkler system is developed to provide the high level technology with automatic sprinkler by monitoring and controlling remotely. Sprinkler is a device that sprays the water to the surrounding area which is similar to rainfall concept. This system helps in maintain the temperature of surrounding area where it is suitable for greenhouse, field and agriculture system. The an uncertain climate effects upon the changes of temperature of environment cause troublesome management and complicated in monitoring activities in real time. On this case, this sprinkler system is activated according to the temperature level by attaching a temperature sensor to the device for measuring the temperature and humidity precisely. The data detected and collected by sensor are uploaded to the database. By using this system, the user can use three operation modes to control the system. The valve will open to allow water sprays regularly through the sprinkler based on the watering time and operation modes. It also provided several notifications about the system status to the users. This system is implemented using Arduino software and hardware, applying sensor for real-time sensing for monitoring temperature and combining with a Wi-Fi module that connects the system with internet wirelessly for remote access. System also uses solar panel which captures sun power to provide renewable energy to operate the system. System is expected can fulfill all the objectives and capable to performing a high technology for users that useful in their life.

ABSTRAK

Pada masa kini, teknologi berkembang dengan pesat yang mampu memudahkan seseorang dalam mengendalikan kerja-kerja dengan lebih teratur dan menjimatkan masa. Oleh itu, sistem pemercik dibangunkan untuk menyediakan sebuah teknologi peringkat tinggi mempunyai semburan secara automatik yang boleh dipantau dan dikawal dari jarak jauh. Pemercik adalah sejenis alatan yang menyembur air ke sekitar kawasan sama seperti konsep air hujan. Sistem ini membantu dalam mengekalkan suhu kawasan sesuai untuk sistem rumah hijau, padang dan sistem pertanian . Keadaan iklim yang tidak menentu memberi perubahan kepada suhu persekitaran menyukarkan sistem pengurusan merumitkan aktiviti pemantauan untuk sepanjang masa. Dalam kes ini, sistem pemercik ini diaktifkan berdasarkan aras suhu dengan menggunakan pengesan suhu supaya peranti dapat mengukur suhu dan kelembapan dengan terperinci. Data yang dikesan dan dikumpulkan dimuat naik ke dalam pangkalan data. Dengan menggunakan sistem ini, pengguna boleh menggunakan tiga mod operasi untuk mengawal sistem. Injap akan terbuka untuk membolehkan air disemur secara berkala melalui pemercik berdasarkan masa menyiram dan mod operation yang telah ditetapkan. Ianya juga menyediakan beberapa pemberitahuan mengenai keadaan sistem kepada pengguna. Sistem ini dilaksanakan dengan menggunakan perisian dan perkakasan Arduino dan, menggunakan pengesan untuk mengesan sepanjang masa bagi memantau suhu dan digabungkan dengan Wi-Fi yang menghubungkan sistem dengan internet untuk dicapai dari jarak jauh. Sistem juga menggunakan panel solar yang menangkap tenaga matahari bagi membekalkan tenaga untuk mengoperasikan sistem. Sistem ini dijangka dapat memenuhi semua objektif dan mampu untuk melaksanakan sebuah teknologi yang berperingkat tinggi untuk pengguna berguna dalam kehidupan mereka.

CHAPTER I

INTRODUCTION

1.1 Introduction

This project is about the development of the automated sprinkler system. In this chapter, it will explain about the background of the project, problem statement, project objective, project scope and contribution of project.

1.2 Background of the project

The automated sprinkler system is built to ease the people in managing their work especially for greenhouse, field and agriculture system. Sprinkler methods can help minimize the large amount of water in agriculture system. It is enable users to control use of water more efficiency to adapt to change of climate. At the same time, sprinkler

can reduce an increasing the rate of coldness due to the lower temperature (Snyder and Melo-Abreu, 2005).

This system operates by using Arduino as microcontroller which contains some program installed to instruct system to work properly. System acts by read a sensor value in real time and store to the database. The system include solenoid valve controlled by relay to perform off or on function to release or prevent the watering through the sprinkler. So, it shall be configure to receive signal and open or close the valve.

A sensor is attached to the system that can be known as temperature sensor which functionally as detector. This sensor will sense the temperature and humidity of surrounding area. According to the threshold value that is setting for this sensor, system will allow the sprinkler to works. Means, when sensor detects the temperature level is reached or more than certain threshold of temperature, the sprinkler will automatic operates for sprays water to the surrounding area. The users also can set time schedule for watering and control the system manually.

However, the system can provides watering time for this sprinkler system and display system notification to the user. This system comes out with a solar panel to capture solar power for supplying voltage to the battery on sunny days and a Wi-Fi module to make connection to the internet.

So, these systems make it easier for people who want to maintain the humidity and temperature of surrounding area and capability to provide remote monitoring control the system .System also can save manpower, water usage and lower utility.

1.3 Problem Statement

Table 1.1 below shows several problem statements in this project.

Table 1.1 Problem Statement of Project

PS	Problem Statement
PS1	Current technology performs manual actions that user faces the difficulties to handle the works
PS2	Difficult to monitor temperature and also control sprinkler to supply water resources.
PS3	Waste of time, energy and operational cost to maintain the humidity of surrounding area and also use excessive water and uncontrolled.

1.4 Project Questions

Table 1.2 below shows several questions in this project.

Table 1.2 Summary of Project Question

PQ	Project Question
PQ1	What are current technology uses for watering system?
PQ2	What type of technique can be used to improve sprinkler system?
PQ3	How can the efficiency of the sprinkler system be achieved?

1.5 Objective

Table 1.3 below shows several objectives to build this project.

Table 1.3 Summary of Project Objective

P0	Project Objective
PO1	To study the developments of the current sprinkler system technology.
PO2	To propose new technology that can improve the current sprinkler system.
PO3	To evaluate the efficiency of sprinkler system technology.

1.6 Project Scope

- i. A system provides real time monitoring and controlling the system remotely.
- ii. A system operates based on operation modes control by the users.
- iii. Data transmit to the database through Wi-Fi module.
- iv. Recharge the battery using solar panel in sunny days.
- v. Provide notification about the system status.

1.7 Project Contribution

This system will capable to provide remote monitoring and control the system .System can save manpower, water usage and lower utility and also maintain temperature and humidity of surrounding area effectively.

1.8 Report Organization

This part contains summary of the all major chapters involved during the process of project development. The report is divided into seven chapters and simply describes on each chapter outline.

Chapter I: Introduction

In this chapter will briefly introduce about the project to be developed. This chapter contains background of project, objectives, problem statement, project scope and project contribution related to the sprinkler system.

Chapter II: Literature Reviews

This chapter indicates about the research and study of related the other previous project to provide more understanding about the propose system and including the conclusion of chapter to complete this chapter.

Chapter III: Methodology

This chapter shows about type and flow of methodology that will be choose for development of the system that would be carried out to develop a new project. This chapter will ease for organizing the project. The conclusion of this chapter will be included to complete this chapter.

Chapter IV: System Analysis & Design

This chapter gives a simply descriptions about result of analysis of the initial design and result of the detailed design. This chapter contains problem analysis, requirement analysis, high level design and detailed design of sprinkler system.

Chapter V: System Implementation

This chapter covers the all activities and processes in the implementation and system development. This chapter involves implement and converting of design into the programming language and logic process.

Chapter VI: System Testing

This chapter discusses about process of testing and evaluation of sprinkler system after implementation process is done in order to identify the expected result of proposed system in each modules.

Chapter VII: Conclusion

This chapter shows about the summarization of the whole project. Besides the limitation that exist in this project and several future additional recommendation will be carry out in this chapter. Then, it follows with conclusion overall of this project.

1.9 Conclusion

This chapter gives an overall background of development of the sprinkler system. Basically, it covers about the introduction of project that will be developed, objective of the project, problem statement and scope of the proposed system. The project that needs to be carrying out in this study is to improve sprinkler water system. This project can be a new technology that can give benefit to the user to easy their work. Then, the next chapter is continues by literature review which contains several previous research related to the project.
