

MULTIMODE UNIVERSAL CONTROLLER USING BLUETOOTH TECHNOLOGY

SURESTARAN S/O KAWANDER PILLAI

This report is submitted in partial fulfillment of the requirement for the award of
Bachelor of Electronic Engineering (Computer Engineering) With Honors

Faculty of Electronic and Computer Engineering
Universiti Teknikal Malaysia Melaka

May 2011

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

FAKULTI KEJURUTERAAN ELEKTRONIK DAN KEJURUTERAAN KOMPUTER

BORANG PENGESAHAN STATUS LAPORAN

PROJEK SARJANA MUDA II

Tajuk Projek : Multimode Universal Controller Using Bluetooth Technology

Sesi Pengajian : 2010/ 2011

Saya SURESTARAN A/L KAWANDER PILLAI mengaku membenarkan Laporan Projek Sarjana Muda ini disimpan di Perpustakaan dengan syarat-syarat kegunaan seperti berikut:

1. Laporan adalah hakmilik Universiti Teknikal Malaysia Melaka.
2. Perpustakaan dibenarkan membuat salinan untuk tujuan pengajian sahaja.
3. Perpustakaan dibenarkan membuat salinan laporan ini sebagai bahan pertukaran antara institusi pengajian tinggi.
4. Sila tandakan (\checkmark) :

Supervisor's Name : Engr. Siva Kumar Subramaniam

Date :

To my beloved father, mother, and all my siblings and friends.

ACKNOWLEDGEMENT

First and foremost, I would like to praise God for HIS blessing. He gave me physical and mental to carry on my final year project from the beginning up to completion. I would like to express gratitude and thanks to my supervisor, Engr. Siva Kumar Subramaniam for his support and unfailing patience throughout the duration of the project. His encouragement and guidance are truly appreciated. Otherwise, this project has not been possible. Apart from that I would like to thank to my Industrial Supervisor Mr. Uthaya Kumar from AI Automation. He also helps me to complete y project on time. I have learnt a lot under his guidance, be it practically or theoretically. Rather than that I would thanks to Mr. Kumarareshan (Equipment Engineer from TECH Semiconductor, Singapore, Mr. Maran (Equipment Engineer from TECH Semiconductor, Singapore and Mr. Devaraj (Software Engineer from TECH Semiconductor, Singapore. They are helping me a lot to complete my final year project. I am also grateful to my all friends who help me and giving me opinion along implementation of this project. I would like to thanks my parent, my sisters, my brothers and my girlfriend on their moral support as I can count on them whenever I am upset or down. Finally, I would like to offer thanks and deepest gratitude from the bottom of my heart for all the support, encouragement and inspirations I obtained throughout the duration of this project. The help rendered to me priceless, be it from the smallest of its kind to the largest.

ABSTRACT

The Bluetooth specification was developed in 1994 by Jaap Haartsen and Sven Mattisson, who were working for Ericsson Mobile Platforms in Lund, Sweden. The specification is based on frequency-hopping spread spectrum technology. The specifications were formalized by the Bluetooth Special Interest Group (SIG). The SIG was formally announced on May 20, 1998. Today it has a membership of over 7000 companies worldwide. It was established by Ericsson, IBM, Intel, Toshiba, and Nokia, and later joined by many other companies. Wireless communication is currently becoming popular and evolving to support communication needs for wide range of applications. It gives opportunity to wireless data transfer technologies such as Infrared, Home radio frequency (RF), Wi-Fi and Bluetooth to be improved for future benefit. With the advancement of radio frequency (RF) and semiconductor technologies, researchers are now concentrating effort in developing Pico-networks where electronic devices can communicate within 100 meters without requiring any fixed infrastructure. The best & cost efficient future is Bluetooth, a technology named after a 10th century king who brought warring Viking tribes under a common rule. The choice of operating in the license-exempt band that is ISM (Industrial Scientific Medical) band which ranges from 2.4 GHz to 2.4835 GHz enable the goals of global applicability, low power and high aggregate capacity to be meet. To be more specific, this project demonstrates the development of the household and office devices that can be controlled using wireless Bluetooth technology, which is suitable for a wireless home or office environments. This system can be adapted to the needs of the customer, for an example this system used as long as the device is able to read the Visual Basic Program.

ABSTRAK

Bluetooth adalah suatu sumber yang digunakan untuk menghantar data tanpa menggunakan bantuan dari sambungan wayar. Pada tahun 1994, bluetooth diperkenalkan oleh En. Jaap Haartsen dan En. Sven Mattission. Mereka merupakan pekerja dari 'Ericsson Mobile Platforms' yang ditapakkan di Luad, Sweden. Pada masa itu juga, Bluetooth Special Interest Group (SIG) diperkenalkan. Mereka mempunyai pelanggan lebih daripada 7000 industri. Kumpulan tersebut telah membuat kajian terhadap bluetooth dan pada masa itulah penggunaan bluetooth telah menjadi lebih meluas. Seorang pengguna bluetooth, boleh menggunakan sistem bluetooth sebagai alat penghantar maklumat dan kadang-kadang ia juga boleh digunakan sebagai alat pengawal untuk sesuatu sistem. Dari terbit idea untuk membuat projek menggunakan sistem bluetooth. Projek ini lebih menfokuskan kepada sistem penghantaran maklumat dan sistem pengawalan sesuatu bahan. Projek dinamakan sebagai alat pengawal dengan bantuan bluetooth sistem dimana project ini mengadungi lapan keluaran yang terdiri dari lampu dan ia akan dikawal dengan menggunakan 'Visual Basic Program'. Project ini lebih sesuai untuk digunakan terhadap kediaman seseorang ataupun boleh degukan terhadap pejabat seseorang juga.

CHAPTER I

INTRODUCTION

The Bluetooth specification was developed in 1994 by Jaap Haartsen and Sven Mattisson, who were working for Ericsson Mobile Platforms in Lund, Sweden. The specification is based on frequency-hopping spread spectrum technology. The specifications were formalized by the Bluetooth Special Interest Group (SIG). The SIG was formally announced on May 20, 1998. Today it has a membership of over 7000 companies worldwide. It was established by Ericsson, IBM, Intel, Toshiba, and Nokia, and later joined by many other companies [1].

1.1 Multimode Universal Controller Using Bluetooth Technology

Wireless communication is currently becoming popular and evolving to support communication needs for wide range of applications. It gives opportunity to wireless data transfer technologies such as Infrared, Home radio frequency (RF), Wi-Fi and Bluetooth to be improved for future benefit. With the advancement of radio frequency (RF) and semiconductor technologies, researchers are now concentrating effort in developing Pico-networks where electronic devices can communicate within 100 meters without requiring any fixed infrastructure. The best & cost efficient future is

Bluetooth, a technology named after a 10th century king who brought warring Viking tribes under a common rule. The choice of operating in the license-exempt band that is ISM (Industrial Scientific Medical) band which ranges from 2.4 GHz to 2.4835 GHz enable the goals of global applicability, low power and high aggregate capacity to be met [2]. To be more specific, this project demonstrates the development of the household and office devices that can be controlled using wireless Bluetooth technology, which is suitable for a wireless home or office environments. This system can be adapted to the needs of the customer, for an example this system used as long as the device is able to read the Visual Basic Program.

1.2 Problem Statements

Even though this demonstrates with latest technology by using Bluetooth, there are some problems that cannot be avoided from persist.

- a) The data can only be sent in serial communication. That means, it's only allowed for one way communication.
- b) Let say the laptop didn't build in with Bluetooth modem, it's compulsory to buy a Bluetooth dongle and install it to the appropriate laptop.
- c) But for PDA system which was not built in with Bluetooth, it's impossible to demonstrate this project into their PDA system.

1.3 Project Objective

This project demonstrates the development of the household and office device that can be controlled using wireless Bluetooth technology. This device is suitable for a

wireless home or office environment situation and best solution to eliminate the need for wires, cables and the corresponding connectors between mobile phones, modems, computers, printers, PDAs and etc. Besides that, the purpose of this project is to design and develop PIC system using Bluetooth technology. Apart from that, this project also interfaces the system between hardware and software (Visual Basic and C-Language). It is a system that can be used to control several home and office appliance like fan, light and etc by using bluetooth device (SKC21).

1.4 Scope of work

The scope of the project is hardware on the hardware and Software. The system also includes of applying the wireless Bluetooth, hardware and Visual Basic by using PIC microcontroller. Bluetooth module is included in the hardware for wireless transmission. However, the software parts that analysis the data is done by Visual Basic program. At the end, the wireless data glove system will be combining with the software part to become the completed home and office environments using Bluetooth technology. The Scope of work has been listed below:

- **Hardware:**
 - ❖ Studied specifications of SKC 21 Bluetooth module and other electronics devices.
 - ❖ Designed a circuit board for a relay card system.
 - ❖ Completed circuits and wiring for PIC, Bluetooth.

- **Programming:**
 - ❖ Develop PIC Microcontroller's program.
 - ❖ Write a program for Visual Basic.

1.5 Expected outcome of the project

The purpose of this project is to design and develop PIC system using Bluetooth technology. Apart from that, this project also interfaces the system between hardware and software (Visual Basic and C-Language). It is a system that can be used to control several home and office appliance like fan, light and etc by using bluetooth device (SKC21). At the end of this project we able see that, all output will be control by Visual Basic 6.

1.6 Project Methodology

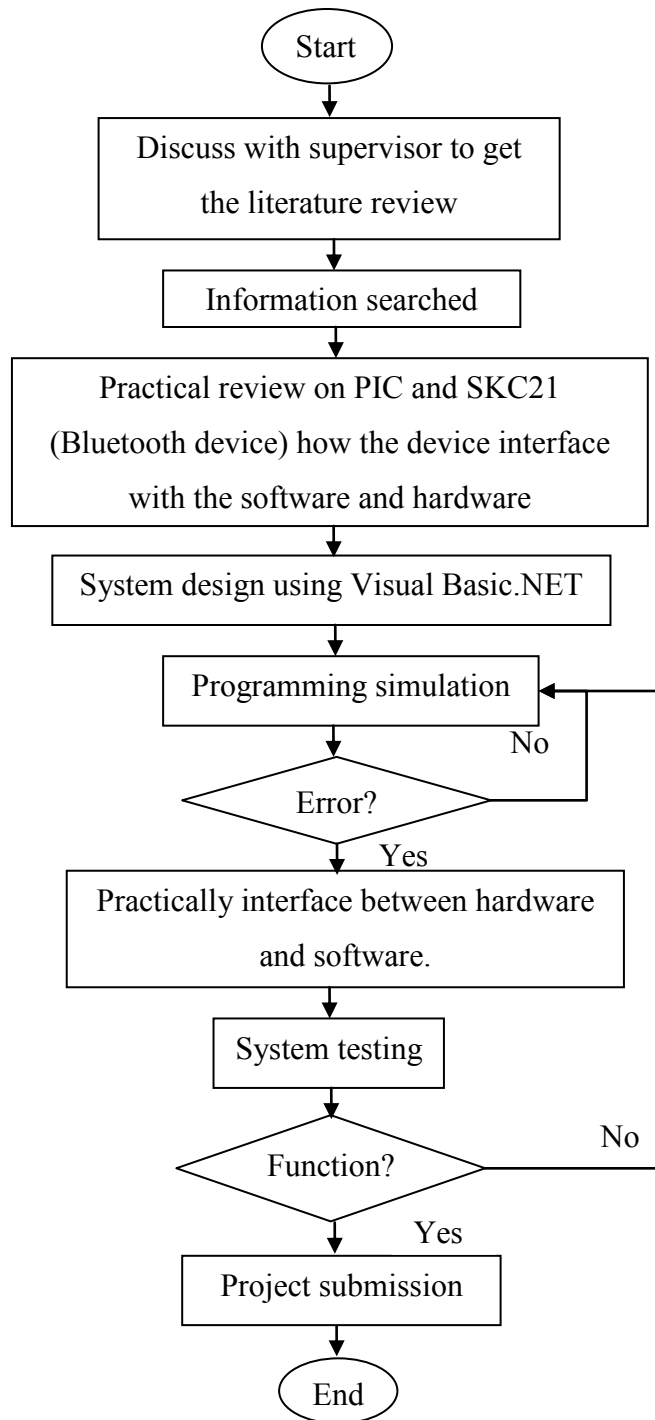

Figure1.0: Flow chart for project methodology
