ABSTRAK

Cecair penyejuk akan memberi pelinciran antara benda kerja dan alat pemotongan dan juga menyingkirkan haba yg terhasil semasa proses pemotongan besi. Prestasi cecair penyejuk akan menyusut mengikut masa dan akan mempengaruhi kualiti produk . Tujuan kajian ini adalah untuk menentukan sama ada sifat benda kerja dan alat pemotongan akan memberikan kesan pada sifat kimia dan fizikal cecair penyejuk. Selain itu, kajian ini juga akan menentukan jenis bahan dan alat pemotongan yang akan mempercepatkan penyusutan cecair penyejuk. Perbandingan tersebut berdasarkan hasil dari proses pelarikan yang akan dianalisis menggunakan FT-IR dan viscometer. Dalam proses permotongan, ada lima parameter yang perlu dipertimbangkan iaitu kelajuan pemotong, masa pemotongan, kelajuan dan kedalaman pemotongan, jenis pendingin, jenis bahan kerja dan alat pemotongan. Semasa proses pemesinan berjalan kelajuan potong, masa pemotongan, kelajuan dan kedalaman potong, dan jenis cecair penyejuk adalah malar sementara bahan kerja dan alat pemotongan adalah boleh ubah tak bersandar.

ABSTRACT

Coolants provide lubrication between the work piece and tool and also remove heat generated during the metal processes. Coolant performance will degrade against time hence affected machining quality of the finish product. The purpose of this study is to determine whether material and tool properties give an effect on the chemical and physical properties of the coolant. In addition, this study will define type of material and tool that may accelerate the degradation of coolant. The comparison is based on the result from turning operation which will be analyzed using FT-iR and viscometer. In the machining process, there are five parameter need to be considered which are cutting speed, cutting time, feed rate and depth of cut, type of coolant, types of material and tool. During machining cutting speed, cutting time, feed rate, and depth of cut, and type of coolant are kept constant while the material and tool are independent variables.

ACKNOWLEDGMENT

Bismillahirrahmanirrahim,

First of all, I would like to thank our Creates Allah SWT that gives me a chance to breathe in the earth. I also would like to acknowledge and express my gratitude and appreciation to my supervisor, En. Mohd Fairuz Bin Dimin for his supervision, encouragement, suggestion, advice and support.

It is pleasure for me to express huge gratitude to all individuals and colleagues which have contribute so much throughout my study and give commitment during this research. Not forget to my friends and other people that are not listed in fulfilling this research, whereas their advice and assistance in various ways was extremely helpful. I could offer here only an inadequate gesture of my appreciation and all of your good deeds will always in my mind.

Thank you.

DEDICATION

For my supervisor, lecturer, family and friends
