

BORANG PENGESAHAN STATUS TESIS[^]

JUDUL: PERFORMANCE INDICATORS SYSTEM IN DECISION SUPPORT FOR INFINEON TECHNOLOGIES (M) SDN BHD.

SESI PENGAJIAN: 2006

Saya _____ **LEE SHU FHUI** _____

(HURUF BESAR)

mengaku membenarkan tesis (PSM/Sarjana/Doktor Falsafah) ini disimpan di Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dengan syarat-syarat kegunaan seperti berikut:

1. Tesis adalah hakmilik Kolej Universiti Teknikal Kebangsaan Malaysia.
2. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan untuk tujuan pengajian sahaja.
3. Perpustakaan Fakulti Teknologi Maklumat dan Komunikasi dibenarkan membuat salinan tesis ini sebagai bahan pertukaran antara institusi pengajian tinggi.
4. ** Sila tandakan (/)

_____ SULIT (Mengandungi maklumat yang berdarjah keselamatan atau kepentingan Malaysia seperti yang termaktub di dalam AKTA RAHSIA RASMI 1972)

_____ TERHAD (Mengandungi maklumat TERHAD yang telah ditentukan oleh organisasi/badan di mana penyelidikan dijalankan)

/ _____ TIDAK TERHAD

DEDICATION

To my beloved parents, Mr. Lee Thau Yun and Mrs. Lin Mui Len, and also my family for their seems less expression of love and fully support ...

To my supervisor, Puan Siti Azirah bt. Asmai, for making it all worthwhile ...

and also to all my beloved one., thanks for all the supprts

ACKNOWLEDGEMENT

I would like to express my gratitude and appreciation to my supervisor, Pn Siti Azirah Bt Asmai for her valuable suggestion and advice throughout the project. She has given me many useful suggestions and ideas. The thesis idea is so impressed me and I am really interested with it. She also help in obtaining the reference and read through the manuscript of this report.

Besides, I would like to thank Kolej Universiti Teknikal Kebangsaan Malaysia for offering PSM (*Projek Sarjana Muda*) as a compulsory subject for KUTKM students to fulfill the degree. A note of thanks is especially dedicated to PSM committee members on their kindness in organizing briefing, seminar and talk to students who took this subject.

I would like to take this opportunity to thank my family and classmate, who have been by my side throughout this time for their friendship, support and loyalty. To them, any expression of thanks is insufficient.

ABSTRACT

Employee Performance in any company is a raising issue now. By using a standardized indication system evaluation towards employees can be done in an easy yet efficient way especially for big company with more than 5000 employees. Infineon Technologies (M) Sdn Bhd foresees the important of fine employee evaluation system, and request for the development of Performance Indicators System In Decision Support. The purpose of the project is to implement a successful performance indicators system to evaluate Infineon's employee performance, thus supporting decision making by management team to monitor and fully utilize available resources. This thesis describes the design and implementation of Performance Indicator System that is suite with the company's need. Basically, this system comprises of four modules which is payroll, resource planning, leave application and data analysis. It is essentially a decision support system that operates by acquiring data from individual and task involved, applying analyzing technique to obtain real effort value by the particular employee and giving out rewards based on the employee's performance. This system provides a reliable evaluation schemes to identify ability of an individual. Object Oriented Analysis and Design has been chosen as a methodology for this project and will be implemented along the system development process to ensure the objectives of the project can be fulfilled. Definitely, the proposed system provides a solution to the company current problem.

ABSTRAK

Isu persembahan pekerja di kalangan industri telah dibangkitkan pada masa ini. Dengan menggunakan suatu system yang menjadi panduan selaras kepada persembahan pekerja, penilaian boleh dijalankan dengan mudah dan efisien terutamanya untuk syarikat besar yang mempunyai lebih daripada 5000 orang pekerja. Menyedari kepentingan untuk suatu penilai persembahan pekerja yang bebas, Infineon Technologies (M) Sdn Bhd telah membuat permintaan untuk pembangunan sistem penilaian persembahan pekerja sebagai sokongan membuat keputusan. Tujuan projek ini adalah untuk melaksanakan system Penilaian Persembahan Pekerja untuk menilai keberkesanan daya usaha perkerja Infineon Technologies, dan sebagai sokongan untuk pihak pentadbiran mengawas dan menggunakan sumber dengan sepenuhnya. Tesis ini menerangkan rekabentuk dan pelaksanaan Sistem Penilaian Persembahan yang sesuai dengan keperluan syarikat tersebut. Sistem ini pada asasnya terdiri daripada empat modul iaitu gaji, perancangan sumber, pemohonan cuti and analisa data. Pada asasnya sistem ini merupakan sistem penyokongan untuk membuat keputusan dengan dari data yang diperolehi dalam individu dengan kerja yang dilaksana, lalu mengaplikasikan teknik menganalisa untuk mendapat nilai sebenar yang diperolehi dari persembahan pekerja dan akhirnya memberi ganjaran setimpal dengan usaha yang diberi. Sistem ini menyediakan satu skema yang perihal untuk menentukan daya usaha seseorang individu dalam syarikat. Analisis dan reka bentuk yang berasaskan objek telah dipilih sebagai kaedah bagi projek ini dan ia akan dilaksanakan sepanjang proses pembangunan sistem untuk memastikan pencapaian objektif. Yang pastinya bahawa cadangan system ini membekalkan jalan penyelesaian untuk masalah semasa syarikat tersebut.

CHAPTER I

INTRODUCTION

1.1 Project Background

The proposed Performance Indicators System in Decision Support consists of four modules, which are resource planning, data analysis, leave application, and bonus appraisal system. There are two level of user authorization, which is managers and general users whom are engineers, the system mainly provides a work station for users to do data entry and processing. With the data provided, system will do extracting and analyzing, and the results will be used to support management team for decision making. The performance indicators system is to provide a user friendly system to monitor all the staff headcount usage under the department. This module intends to support project management team to fully utilize the resources in the department, provides resource allocation that proportional to the project's importance. Generally, leave application module is for general users to apply for leave, and administrator to approve/reject the leave application. While bonus appraisal application uses data collected from the other modules to auto generate bonuses proportional to the particular staff.

1.2 Problem Statement

Currently, Infineon Technologies (M) Sdn Bhd. Power Semiconductor Development Department (PS DEV) is doing a resource monitoring system among all its staff where each engineers have to provide a real number of their own headcount for used in certain project. The system is run by using an excel sheets where everyone can read and write the file which located in a network drive. Currently the file only display static data with some charts, and sometimes it is not updated. User found it hard to do data entry in a data sheet form. Difficulties found where only one single user can open the file to do editing in one time.

Whereas, for the bonus appraisal, staffs need to manually enter their own total headcount for each month separately in order to generate bonus added to their salary since the resource planning spreadsheet is not connected to the payroll system, causing work redundancy for the staffs. Therefore, a solution needed to be developed in order to upgrade the system to be run efficiently and effectively.

1.3 Objective

- To provide a web-based service to staffs, including resource planning, data analysis, leave application, and bonus appraisal system.
- To provide a secure Performance Indicators System with different level of authorization.
- To provide capabilities for extracting, processing and analyzing the project resource allocation.
- To support strategic decision-making for management team with access to useful information.

1.4 Scopes

Before the construction of the system commence, the scope of the project has to be determine in order to create the boundary of the system. This will keep the development of the system within a manageable scope. The scope is divided into 2 parts, which are users and functionality.

1.4.1 User

The user for the system would be:

- a. Engineers
- b. Department Managers

1.4.2 Functionality

The project will be focused in the development of Performance Indicators System in Decision Support for Infineon Technologies(M) Sdn Bhd. The scopes of project are identified as follow:

a) Resource Planning

- Adding New Projects and resource.
 - In this part, administrator can add a new project and details to the database.
 - Administrator can add or delete a staff from certain projects.
 - General user who wishes to join or delete their name to or from a project can make a request here and wait for the administrator to approve.
- Total Resource Allocation
 - All individuals and their total head count used for current 12 months can be viewed here.

- View Project Details
 - Project category, BIM , AKZ number, Ratio 12 and Ratio 52, Start Date and End Date are listed here.

b) Leave Application

- Provide function to apply leave (annual leave, maternity leave or unpaid leave) for each month to all users.
- Staffs can also view their own approved/pending leave here.
- Administrator can approve/reject user application here according to user's status changes.

c) Bonus Appraisal

- This function will auto generate bonus for staffs according to data collected from the project planning and leave application modules
- Total head count used for staff will add extra bonus for staff.

d) Data Analysis

- This function will auto generate report that will support management team in making decision according to user needs.

• View Graph

- Ratio Chart
 - User can view each month's total resource in ratio 12 and ratio 52 for all projects.
- Overall Chart
 - User can select projects that wished to view in the graph, then system will generate a graph of categories and headcount used for each categories depend on user's selection.

- View report.
